C-SEC-2405유효한 인증공부자료, C-SEC-2405시험문제모음

그렇게 많은 IT인증덤프공부자료를 제공하는 사이트중KoreaDumps의 인지도가 제일 높은 원인은 무엇일까요?그건 KoreaDumps의 제품이 가장 좋다는 것을 의미합니다. KoreaDumps에서 제공해드리는 SAP인증 C-SEC-2405덤프공부자료는SAP인증 C-SEC-2405실제시험문제에 초점을 맞추어 시험커버율이 거의 100%입니다. 이 덤프만 공부하시면SAP인증 C-SEC-2405시험패스에 자신을 느끼게 됩니다.

SAP C-SEC-2405 시험요강:

주제	소개
주제 1	• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
주제 2	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.

주제 3	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
주제 4	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.

최신 SAP Certified Associate C-SEC-2405 무료 샘플문제 (Q14-Q19):

질문 # 14

Which SU01 user types are NOT enabled for interaction? Note: There are 2 correct answers to this question.

- A. System
- B. Communications Data
- C. Service
- D. Dialog

정답: A,C

설명:

In SAP, certain SU01 user types are not enabled for interactive use:

- * Service Users (A):
- * Designed for background jobs or tasks requiring anonymous or shared access.
- * Cannot log in interactively.
- * System Users (B):
- * Used for communication between systems and background processes.
- * Does not support interactive login.

Why Others Are Incorrect:

- * Dialog Users (C): Designed specifically for interactive logins.
- * Communications Data (D): Often refers to communication-specific settings, not user types.

SAP Security References:

- * SAP Help Portal: User Type Overview
- * SAP Documentation: SU01 User Type Functionalities

질문 # 15

Which cloud-based SAP solution helps organizations control their data across various cloud platforms and on-premise data sources?

- A. SAP Information Steward
- B. SAP Data Custodian
- C. SAP Identity Access Governance
- D. SAP Privacy Governance

정답: B

설명:

SAP Data Custodian is the cloud-based SAP solution designed to help organizations control their data across various cloud platforms and on-premise data sources. It provides a centralized framework for data governance, enabling organizations to monitor, manage, and secure data throughout its lifecycle, regardless of where it resides. SAP Data Custodian ensures compliance with data protection regulations by offering tools for data discovery, classification, and access control, making it ideal for hybrid environments. In contrast, SAP Identity Access Governance focuses on managing user access and permissions, SAP Information Steward is used for data quality and profiling, and SAP Privacy Governance addresses privacy compliance.

SAP Data Custodian's unique capability to unify data control across diverse platforms makes it the correct choice for comprehensive data management and security.

질문 # 16

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Adjust role restrictions to account for missing authorizations
- B. Analyze authorization check results for missing authorizations
- C. Display business roles granting specific access
- D. Adjust role restrictions to further limit access when performing forensic analysis
- E. Analyze authorization check results for already assigned authorizations

정답: B,C,E

설명:

The Display Authorization Trace in SAP S/4HANA Cloud Public Edition is a powerful tool for analyzing authorization issues. It allows administrators to analyze authorization check results for missing authorizations, identifying gaps where users lack necessary permissions to perform tasks, which is critical for troubleshooting access issues. Additionally, it can display business roles granting specific access, providing visibility into which roles provide permissions for particular applications or data, aiding in role management and compliance checks. The tool also supports analyzing authorization check results for already assigned authorizations, helping administrators verify whether existing permissions are functioning as intended.

However, adjusting role restrictions, either to address missing authorizations or for forensic analysis, is not a function of the Display Authorization Trace, as it is a diagnostic tool, not a maintenance interface. These capabilities make the Display Authorization Trace essential for ensuring secure and efficient access control, supporting both operational and audit requirements in SAP S/4HANA Cloud Public Edition.

질문 # 17

Which object type is assigned to activated OData services in transaction SU24?

- A. HTTP
- B. G4BA
- C. IWSG
- D. IWSV

정답: D

설명:

* Context: Activated OData services are linked with specific object types for authorization maintenance.

* Solution Explanation:

* IWSV: Assigned to activated OData services in SU24, representing individual service definitions.

SAP Security References:

* SAP SU24 Role Maintenance Guide

* SAP Gateway and OData Authorization Documentation

질문 # 18

Which cryptographic libraries are provided by SAP? Note: There are 2 correct answers to this question.

- A. Cryptlib
- B. SecLib
- C. SAPCRYPTOLIB
- D. CommonCryptoLib

정답: C,D

설명:

SAP provides two cryptographic libraries: CommonCryptoLib and SAPCRYPTOLIB. CommonCryptoLib is a modern, versatile library used across SAP systems for cryptographic operations, such as encryption, digital signatures, and secure communication, supporting protocols like TLS and SNC. It is designed for high performance and compliance with current security standards.

SAPCRYPTOLIB, an earlier library, provides similar cryptographic functions, including encryption and authentication, and is used in older SAP systems or specific scenarios requiring legacy support. Both libraries ensure secure data handling and communication
