We try to offer the best Professional-Cloud-Architect exam braindumps to our customers. First of all, in order to give users a better experience, we have been updating the system of Professional-Cloud-Architect simulating exam to meet the needs of more users. After the new version appears, we will also notify the user at the first time. Second, in terms of content, we guarantee that the content provided by our Professional-Cloud-Architect Study Materials is the most comprehensive.

Professional-Cloud-Architect test questions have so many advantages that basically meet all the requirements of the user. If you have good comments or suggestions during the trial period, you can also give us feedback in a timely manner. Our study materials will give you a benefit as Thanks, we do it all for the benefits of the user. Professional-Cloud-Architect Study Materials look forward to your joining in.

Pass Guaranteed 2026 Marvelous Google Professional-Cloud-Architect: Google Certified Professional - Cloud Architect (GCP) Online Lab Simulation

TestPDF certification training exam for Professional-Cloud-Architect are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development. TestPDF Professional-Cloud-Architect certification training exam material including the examination question and the answer, complete by our senior lecturers and the Professional-Cloud-Architect product experts, included the current newest Professional-Cloud-Architect examination questions.

Recommended Experience

Officially, there are no prerequisites to be fulfilled before taking-up the Google Professional Cloud Architect exam. Anyone who wants to polish their knowledge of Google Cloud and aim at an architect role can apply for it.

However, it is recommended to have a minimum of 3+ years of industry experience before anyone enrolls in the test. These should also include 1+ years of experience in designing solutions as well as managing them using GCP. Such a base will make the exam journey a bit more simplified.

Google Professional-Cloud-Architect exam is a certification program designed for IT professionals who have experience in designing and managing cloud solutions using Google Cloud Platform (GCP). Google Certified Professional - Cloud Architect (GCP) certification validates the knowledge and skills required to design, develop, and manage cloud solutions using GCP technologies. It is intended for individuals who are looking to advance their careers in cloud architecture and demonstrate their expertise in Google Cloud technologies.

Google Professional-Cloud-Architect Exam is a certification program that focuses on testing an individual's ability to design and manage secure, scalable, and reliable cloud-based solutions using Google Cloud Platform (GCP). Google Certified Professional - Cloud Architect (GCP) certification is aimed at cloud architects, engineers, and consultants who want to showcase their expertise in Google Cloud technologies and help their organizations migrate to the cloud.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q160-Q165):

NEW QUESTION # 160
You are designing a mobile chat application. You want to ensure people cannot spoof chat messages, by providing a message were sent by a specific user.
What should you do

- A. Tag messages client side with the originating user identifier and the destination user.
- B. Use a trusted certificate authority to enable SSL connectivity between the client application and the server.
- C. Use public key infrastructure (PKI) to encrypt the message client side using the originating user's private key.
- D. Encrypt the message client side using block-based encryption with a shared key.

Answer: B

Explanation:
Encrypting each block and tagging each message at the client side is an overhead on the application.
Best
method which has been adopted since years is contacting the SSL provider and use the public certificate to encrypt the traffic between client and the server.

NEW QUESTION # 161
You want to optimize the performance of an accurate, real-time, weather-charting application. The data comes from 50,000 sensors sending 10 readings a second, in the format of a timestamp and sensor reading.
Where should you store the data?

- A. Google Cloud Bigtable
- B. Google Cloud Storage
- C. Google Cloud SQL
- D. Google BigQuery

Answer: A

Explanation:
Explanation/Reference:
Explanation:
Google Cloud Bigtable is a scalable, fully-managed NoSQL wide-column database that is suitable for both real-time access and analytics workloads.
Good for:
Low-latency read/write access
High-throughput analytics
Native time series support

Common workloads:

IoT, finance, adtech

Personalization, recommendations

Monitoring

Geospatial datasets

Graphs

NEW QUESTION # 162

For this question, refer to the TerramEarth case study

You analyzed TerramEarth's business requirement to reduce downtime, and found that they can achieve a majority of time saving by reducing customers' wait time for parts You decided to focus on reduction of the 3 weeks aggregate reporting time Which modifications to the company's processes should you recommend?

- A. Increase fleet cellular connectivity to 80%, migrate from FTP to streaming transport, and develop machine learning analysis of metrics.
- B. Migrate from FTP to SFTP transport, develop machine learning analysis of metrics, and increase dealer local inventory by a fixed factor.
- C. Migrate from CSV to binary format, migrate from FTP to SFTP transport, and develop machine learning analysis of metrics.
- D. Migrate from FTP to streaming transport, migrate from CSV to binary format, and develop machine learning analysis of metrics.

Answer: A

Explanation:
Reference:
The Avro binary format is the preferred format for loading compressed data. Avro data is faster to load because the data can be read in parallel, even when the data blocks are compressed.
Cloud Storage supports streaming transfers with the gsutil tool or boto library, based on HTTP chunked transfer encoding.
Streaming data lets you stream data to and from your Cloud Storage account as soon as it becomes available without requiring that the data be first saved to a separate file. Streaming transfers are useful if you have a process that generates data and you do not want to buffer it locally before uploading it, or if you want to send the result from a computational pipeline directly into Cloud Storage.

NEW QUESTION # 163

For this question, refer to the EHR Healthcare case study. EHR has single Dedicated Interconnect connection between their primary data center and Googles network. This connection satisfies EHR's network and security policies:
* On-premises servers without public IP addresses need to connect to cloud resources without public IP addresses
* Traffic flows from production network mgmt. servers to Compute Engine virtual machines should never traverse the public internet.
You need to upgrade the EHR connection to comply with their requirements. The new connection design must support business critical needs and meet the same network and security policy requirements. What should you do?

- A. Upgrade the bandwidth on the Dedicated Interconnect connection to 100 G
- B. Add a new Carrier Peering connection
- C. Add three new Cloud VPN connections
- D. Add a new Dedicated Interconnect connection

Answer: D

Explanation:
The case does not call out the throughput being an issue. However, to achieve 99.99%, you need to have 4 connections as per Google recommendations. However, in the options only A has the option to add an additional Interconnect connection.
https://cloud.google.com/network-connectivity/docs/interconnect/concepts/dedicated-overview#availability

NEW QUESTION # 164

For this question, refer to the JencoMart case study.

JencoMart has built a version of their application on Google Cloud Platform that serves traffic to Asia. You want to measure success against their business and technical goals. Which metrics should you track?

- A. Error rates for requests from Asia
- B. Total visits and average latency for users in Asia
- C. Total visits, error rates, and latency from Asia
- D. The number of character sets present in the database
- E. Latency difference between US and Asia

Answer: B

Explanation:
Explanation
From scenario:
Business Requirements include: Expand services into Asia
Technical Requirements include: Decrease latency in Asia

NEW QUESTION # 165

......

A lot of progress is being made in the Google sector today. Many companies offer job opportunities to qualified candidates, but they have specific Professional-Cloud-Architect certification criteria to select qualified candidates. Thus, they can filter out effective and qualified candidates from the population. Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) must be taken and passed to become a certified individual.
