

# Valid Test VMware 3V0-21.25 Test - Reliable 3V0-21.25 Practice Materials

---

## VMware 3V0-21.25 Exam

### Advanced VMware Cloud Foundation 9.0 Automation

<https://www.passquestion.com/3v0-21-25.html>

Pass 3V0-21.25 Exam with PassQuestion 3V0-21.25 questions and answers in the first attempt.

<https://www.passquestion.com/>

BTW, DOWNLOAD part of PDFDumps 3V0-21.25 dumps from Cloud Storage: <https://drive.google.com/open?id=10QZ0J9a4PN06iy11WxLoZ3TVU-YSvXef>

Perhaps you have had such an unpleasant experience about what you brought in the internet was not suitable for you in actual use, to avoid this, our company has prepared 3V0-21.25 free demo in this website for our customers, with which you can have your first-hand experience before making your final decision. The content of the free demo is part of the content in our real 3V0-21.25 Study Guide. As long as you click on it, then you can download it. We believe you can have a good experience with our demos of the 3V0-21.25 learning guide.

## VMware 3V0-21.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This section focuses on understanding fundamental IT architectures, technologies, and industry standards that support VMware Cloud Foundation environments. It ensures candidates understand the foundational concepts required to design and manage automated cloud infrastructure solutions.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>VMware Products and Solutions: This section covers VMware products related to VMware Cloud Foundation Automation, particularly components such as vSphere Supervisor and supervisor-based NSX networking. It focuses on identifying and differentiating architectural components and how they function within a deployment.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Operation Management: This section focuses on monitoring and managing operational aspects of VMware Cloud Foundation Automation. It includes using VMware operations tools to monitor automation services, provider management, and organizational environments.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Plan and Design the VMware Solution: This section focuses on designing VMware Cloud Foundation Automation environments based on business and technical requirements. It includes understanding tenancy deployment models, organization types, and the functional components used to structure and manage cloud resources.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware Solution: This section covers configuring and administering VMware Cloud Foundation Automation environments. It includes managing provider portals, organizations, integrations, governance policies, resource deployments, automation workflows, blueprints, and orchestrator components.</li> </ul>

## Reliable VMware 3V0-21.25 Practice Materials, Braindump 3V0-21.25 Free

After you purchase our 3V0-21.25 exam guide is you can download the test bank you have bought immediately. You only need 20-30 hours to learn and prepare for the 3V0-21.25 exam, because it is enough for you to grasp all content of our 3V0-21.25 study materials, and the passing rate of our 3V0-21.25 Exam Questions is very high and about 98%-100%. Our latest 3V0-21.25 quiz torrent provides 3 versions and you can choose the most suitable one for you to learn. All in all, there are many merits of our 3V0-21.25 quiz prep.

## VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q43-Q48):

### NEW QUESTION # 43

An administrator has been tasked to enable developers to utilize Terraform to configure resources within VMware Cloud Foundation (VCF) Automation. The solution must:

- \* enable developers to configure Content Libraries.
- \* enable developers to configure Cloud Zones.
- \* enable developers to create flavor and image mappings.

What solution satisfies the requirements?

- A. Organization Administrator role.
- **B. Terraform provider for VCF Automation.**
- C. System Administrator role.
- D. Terraform configuration in VCF Automation.

**Answer: B**

Explanation:

The Terraform provider for VCF Automation is the specific tool designed to allow Infrastructure-as-Code (IaC) workflows to interact with the VCF 9.0 API surface. In VCF 9.0, the provider has been expanded to support the newer Organization and Region-based architecture. By utilizing this provider, developers can declare Content Libraries, Cloud Zones, and Flavor/Image Mappings within their HCL (HashiCorp Configuration Language) files. While specific RBAC roles (like Organization Administrator) are necessary for the credentials used by the Terraform runner, the solution itself is the provider that translates Terraform commands into the correct REST API calls for the VCF Automation engine. This enables a consistent developer experience where infrastructure configuration is versioned in Git and applied programmatically, aligning with modern DevOps practices supported by the VCF 9.0 platform.

#### NEW QUESTION # 44

An administrator is tasked with configuring a multi-tenant environment within the organization's VMware Cloud Foundation (VCF) deployment. Requirements are:

- \* isolated network spaces for development and testing.
- \* dedicated resources.
- \* role-based access control.

Which of the actions satisfies the requirement?

- **A. Define and allocate IP blocks and quotas at the organization level, which will then be consumed by the NSX VPCs created by the different departments.**
- B. Create an NSX backed VLAN segment per department.
- C. Define and allocate IP blocks and quotas at the organization level, which will then be selected and consumed by users at deployment.
- D. Grant full administrative access for one responsible user in each department to create and manage their own network configurations.
- E. Configure firewall rules at the datacenter edge level to isolate traffic between departments.

**Answer: A**

Explanation:

The introduction of Virtual Private Clouds (VPCs) in VCF 9.0 is the primary mechanism for achieving isolated networking in a multi-tenant environment. The correct administrative workflow involves the Provider or Organization Administrator defining IP Blocks and Quotas at the Organization level. These resource allocations act as a "bucket" of capacity from which individual departments or projects can draw. When a department creates an NSX VPC, it automatically consumes these pre-allocated IP ranges for its internal segments and services, ensuring that development and testing environments remain logically isolated at the network layer without requiring manual intervention for every subnet creation. This "consumption-based" model ensures that while departments have the flexibility to manage their own VPC resources, they remain constrained by the governance and RBAC policies defined at the higher Organization level. This approach significantly reduces the operational overhead compared to traditional VLAN segment management or complex edge firewall rules.

#### NEW QUESTION # 45

A VMware Cloud Foundation (VCF) Automation Administrator is tasked to enable VCF Automation with the following requirements:

- \* All companies are hosted within a single private cloud.
- \* RBAC (role-based access control) is enforced.
- \* Resource governance within companies.
- \* Segregation between companies.

What two actions must the VCF Automation Administrator perform to satisfy the requirements? (Choose two.)

- A. Create and configure an AllApps Organization per company.
- **B. Ensure that the vCenter instance has a Supervisor cluster enabled.**
- C. Deploy a VCF Operations Orchestrator server to enable multi-tenancy.
- D. Deploy a vCenter instance with a Supervisor cluster per company.
- **E. Create and configure a VMApps Organization per company.**

**Answer: B,E**

Explanation:

In VMware Cloud Foundation 9.0, multi-tenancy is structured around the concept of Organizations. To meet the requirement of hosting multiple companies within a single private cloud with strict segregation and governance, the administrator must utilize the VMApps Organization model. Unlike the AllApps model, which is highly optimized for modern containerized and VPC-driven workloads, the VMApps Organization is specifically designed for environments requiring traditional VM-centric segregation and access control while sharing underlying physical infrastructure. Enabling a Supervisor cluster on the vCenter instance is a foundational prerequisite for these advanced automation capabilities. The Supervisor provides the necessary integration between the vSphere compute layer and the VCF Automation control plane, allowing for the instantiation of the Namespace and Organization constructs that enforce RBAC and resource quotas. By configuring a VMApps Organization per company, the administrator ensures that each tenant has a distinct administrative boundary, private catalog, and isolated resource allocation, effectively satisfying the requirements for hard tenancy within a consolidated private cloud environment.

#### NEW QUESTION # 46

An Organization Administrator for an AllApps Organization in VMware Cloud Foundation (VCF) Automation must determine which networks are used by deployed workloads.

How does the administrator view the networks?

- A. The NSX Tier-1 gateway mappings for each workload in the Organization can be retrieved with `kubectl get vm`.
- B. VPCs, connectivity profiles and the associated NSX segment and Tier-1 gateway details can be retrieved with `vcf-cli deployment get`.
- C. The NSX segments mapped to each workload are visible by expanding deployment details for each deployed workload in the Organization Portal.
- D. VPCs and connectivity profile assignments are visible in the Organization Portal, but the underlying NSX Tier-1 gateways and segments are not.

**Answer: D**

Explanation:

The AllApps (AllApps) organization model in VCF 9.0 is built on the principle of high-level abstraction to simplify the developer experience. In this model, the Organization Portal presents networking through the lens of Virtual Private Clouds (VPCs) and Connectivity Profiles. The Organization Administrator can easily view which VPC a workload belongs to and what connectivity policies (such as public access or isolation) are applied. However, the underlying NSX implementation details—such as the specific Tier-1 gateways and segments automatically created by the Supervisor—are intentionally abstracted away from the organization-level view. This "cloud-style" visibility ensures that tenants can manage their application networking without being burdened by the complexity of the provider's physical or logical NSX fabric, which remains the exclusive domain of the Provider Administrator.

#### NEW QUESTION # 47

An administrator is tasked with configuring an existing Organization to enable users to create namespaces with GPU resources on their assigned Projects.

The Organization is backed by a Region with a GPU-enabled supervisor on a single zone setup.

What needs to be configured for this requirement?

- A. NVIDIA GPU Operator.
- B. GPU enabled VM Classes.
- C. Namespace Class with VM Class Reservations.
- D. NVIDIA `grid_al00-40c` profile.

**Answer: C**

Explanation:

To deliver GPU resources to tenant users in VCF 9.0, the administrator must bridge the physical hardware to the logical project via a Namespace Class. Specifically, the administrator must create or modify a Namespace Class to include VM Class Reservations for GPU-enabled classes. In VCF 9.0, a "Namespace Class" defines the templates and limits for the Kubernetes namespaces that users can create. By adding a GPU-enabled VM Class (such as one utilizing NVIDIA vGPU profiles) to the reservation list within the Namespace Class, the administrator ensures that the Supervisor knows to prioritize and reserve those specific hardware resources for workloads deployed into that namespace. Once this Namespace Class is bound to the user's Project, the users can then select the GPU-enabled classes when deploying their containers or VMs, fulfilling the requirement for high-performance compute within the multi-tenant environment.

#### NEW QUESTION # 48

.....

Good news comes that our company has successfully launched the new version of the 3V0-21.25 guide tests. Perhaps you are deeply bothered by preparing the exam; perhaps you have wanted to give it up. Now, you can totally feel relaxed with the assistance of our 3V0-21.25 actual test. Our products are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our study materials is the highest in the market. There are thousands of customers have passed their exam and get the related certification. After that, all of their 3V0-21.25 Exam torrents were purchase on our website.
