400-007 exam dumps at DumpsTests are always kept up to date. Every addition or subtraction of 400-007 exam dumps in the exam syllabus is updated in our brain dumps instantly. Practice on real 400-007 exam dumps and we have provided their answers too for your convenience. If you put just a bit of extra effort, you can score the highest possible score in the Real 400-007 Exam because our 400-007 exam preparation dumps are designed for the best results.

Cisco 400-007 exam tests a candidate's knowledge of network design theories, principles, and best practices, as well as their ability to apply these concepts to real-world scenarios. It covers a wide range of topics, including network design methodologies, network security, routing and switching, virtualization, and network automation. To Pass 400-007 Exam, candidates need to have a deep understanding of these topics and be able to apply their knowledge to solve complex problems.

## Free PDF Quiz Cisco - 400-007 –Reliable New Dumps

We are quite confident that all these Cisco 400-007 exam dumps feature you will not find anywhere. Just download the Cisco 400-007 and start this journey right now. For the well and Cisco 400-007 Exam Dumps preparation, you can get help from Cisco 400-007 which will provide you with everything that you need to learn, prepare and pass the Cisco Certified Design Expert (CCDE v3.0) Written Exam (400-007) certification exam.

Cisco 400-007 Exam is the written component of the CCDE v3.0 certification. Cisco Certified Design Expert (CCDE v3.0) Written Exam certification is one of the highest levels of certification offered by Cisco and is recognized worldwide. It is designed for professionals who have extensive experience in network design and architecture and who are looking to validate their skills and knowledge in this area.

## Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q453-Q458):

NEW QUESTION # 453

Which management category is not part of FCAPS framework?

- A. Performance
- **B. Authentication**
- C. Security
- D. Configuration
- E. Fault-management

**Answer: B**

Explanation:

- \* FCAPS stands for Fault, Configuration, Accounting, Performance, and Security.
- \* D (Authentication) is not a management category within the FCAPS framework.
- \* Authentication is part of security functions but not a standalone FCAPS category.

Why other options are correct FCAPS components:

- \* A: Configuration management
- \* B: Security management
- \* C: Performance management
- \* E: Fault management

#### NEW QUESTION # 454

Which undesired effect of increasing the jitter compensation buffer is true?

- A. The overall transport jitter increases and quality issues can occur.
- B. The overall transport jitter decreases and quality improves.
- **C. The overall transport delay increases and quality issues can occur.**
- D. The overall transport delay decreases and quality improves.

**Answer: C**

Explanation:

- \* Increasing jitter buffer size smoothens jitter but at the cost of introducing additional delay.
- \* Excessive jitter buffering can lead to perceptible audio or video lag, impacting user experience.
- \* C: Therefore, the undesired effect is increased transport delay, potentially leading to quality issues if the buffer size is too large.

Why other options are incorrect:

- \* A & D: Jitter buffering does not improve jitter itself; it masks it at the expense of delay.
- \* B: Jitter compensation doesn't increase jitter, but delay.

-

#### NEW QUESTION # 455

A business invests in SDN and develops its own SDN controller that, due to budget constraints, runs on a single controller. The controller actively places an exclusive lock on the configuration of the devices to ensure it is the only source of changes to the environment. What is the result if the controller fails?

- **A. The control plane is unavailable until the controller is restored.**
- B. Manual changes are only possible until the controller is restored
- C. If a device fails, the configuration backup is unavailable-
- D. All device configurations are in read-only mode until the controller is restored.

**Answer: A**

#### NEW QUESTION # 456

What is a disadvantage of the traditional three-tier architecture model when east-west traffic between different pods must go through the distribution and core layers?

- A. Scalability
- **B. High latency**

- C. Security
- D. Low bandwidth

**Answer: B**

Explanation:

\* D (High latency): In three-tier architectures, east-west traffic between different pods (access domains) must traverse additional layers (distribution and core), introducing extra hops and thus adding latency.

This inefficiency is one reason why spine-leaf architectures are favored for modern data centers.

Other options explained:

- \* A: Bandwidth is less of a concern with high-speed core links.
- \* B: Security is not directly affected by east-west traversal in this architecture.
- \* C: Scalability is limited, but the primary issue for east-west traffic is latency.

#### NEW QUESTION # 457

An attacker exploits application flaws to obtain data and credentials. What is the next step after application discovery in Zero Trust networking?

- A. Assess real-time security health
- B. Ensure trustworthiness of systems
- C. Enforce policies and microsegmentation
- **D. Establish visibility and behavior modeling**

**Answer: D**

Explanation:

\* A (Establish visibility and behavior modeling): After discovering applications, Zero Trust design requires baseline visibility into traffic flows, system behavior, and interaction patterns. This modeling allows for the design of effective microsegmentation and policy enforcement.

Other options explained:

- \* B: Policy enforcement comes after visibility and modeling.
- \* C: Health assessment is a continuous activity but not the next step.
- \* D: Trust assessment is part of the initial Zero Trust design, not specifically after discovery.
