## New DCPLA Real Exam - DCPLA Reliable Test Practice

In order to meet the requirements of our customers, Our DCPLA test questions carefully designed the automatic correcting system for customers. It is known to us that practicing the incorrect questions is very important for everyone, so our DCPLA exam question provide the automatic correcting system to help customers understand and correct the errors. If you are finding a study material in order to get away from your exam, you can spend little time to know about our DCPLA Test Torrent, it must suit for you.

DSCI DCPLA certification exam is an important certification for professionals who are seeking to specialize in privacy assessments. DSCI Certified Privacy Lead Assessor DCPLA certification certification program is designed to help professionals gain a deep understanding of privacy assessment and to be able to apply it effectively in their organizations. DSCI Certified Privacy Lead Assessor DCPLA certification certification exam is designed to test the skills and knowledge of individuals in privacy assessment and to ensure that they meet the industry standards.

The DCPLA Certification Exam is designed to test an individual's knowledge of privacy laws, regulations, and best practices. It covers a range of topics, including data protection laws, privacy impact assessments, privacy risk management, and privacy program

management. Successful candidates will demonstrate their ability to identify privacy risks, develop recommendations for mitigating those risks, and communicate those recommendations to stakeholders.

## **DSCI Certified Privacy Lead Assessor DCPLA certification Sample Questions (Q29-Q34):**

### **NEW QUESTION # 29**

FILL BLANK

PPP

Based on the visibility exercise, the consultants created a single privacy policy applicable to all the client relationships and business functions. The policy detailed out what PI company deals with, how it is used, what security measures are deployed for protection, to whom it is shared, etc. Given the need to address all the client relationships and business functions, through a single policy, the privacy policy became very lengthy and complex. The privacy policy was published on company's intranet and also circulated to heads of all the relationships and functions. W.r.t. some client relationships, there was also confusion whether the privacy policy should be notified to the end customers of the clients as the company was directly collecting PI as part of the delivery of BPM services. The heads found it difficult to understand the policy (as they could not directly relate to it) and what actions they need to perform. To assuage their concerns, a training workshop was conducted for 1 day. All the relationship and function heads attended the training. However, the training could not be completed in the given time, as there were numerous questions from the audiences and it took lot of time to clarify.

(Note: Candidates are requested to make and state assumptions wherever appropriate to reach a definitive conclusion) Introduction and Background XYZ is a major India based IT and Business Process Management (BPM) service provider listed at BSE and NSE. It has more than 1.5 lakh employees operating in 100 offices across 30 countries. It serves more than 500 clients across industry verticals - BFSI, Retail, Government, Healthcare, Telecom among others in Americas, Europe, Asia-Pacific, Middle East and Africa. The company provides IT services including application development and maintenance, IT Infrastructure management, consulting, among others. It also offers IT products mainly for its BFSI customers.

The company is witnessing phenomenal growth in the BPM services over last few years including Finance & Accounting including credit card processing, Payroll processing, Customer support, Legal Process Outsourcing, among others and has rolled out platform based services. Most of the company's revenue comes from the US from the BFSI sector. In order to diversify its portfolio, the company is looking to expand its operations in Europe. India, too has attracted company's attention given the phenomenal increase in domestic IT spend esp. by the government through various large scale IT projects. The company is also very aggressive in the cloud and mobility space, with a strong focus on delivery of cloud services. When it comes to expanding operations in Europe, company is facing difficulties in realizing the full potential of the market because of privacy related concerns of the clients arising from the stringent regulatory requirements based on EU General Data Protection Regulation (EU GDPR).

To get better access to this market, the company decided to invest in privacy, so that it is able to provide increased assurance to potential clients in the EU and this will also benefit its US operations because privacy concerns are also on rise in the US. It will also help company leverage outsourcing opportunities in the Healthcare sector in the US which would involve protection of sensitive medical records of the US citizens.

The company believes that privacy will also be a key differentiator in the cloud business going forward. In short, privacy was taken up as a strategic initiative in the company in early 2011.

Since XYZ had an internal consulting arm, it assigned the responsibility of designing and implementing an enterprise wide privacy program to the consulting arm. The consulting arm had very good expertise in information security consulting but had limited expertise in the privacy domain. The project was to be driven by CIO's office, in close consultation with the Corporate Information Security and Legal functions.

Given the confusion among relationship and function heads, how would you proceed to address the problem and ensure that policy is well understood and deployed? (250 to 500 words)

### **Answer:**

#### **Explanation:**

In order to address the confusion among relationship and function heads, it is important to ensure that the privacy policy is effectively communicated and understood by all stakeholders. The following steps can be taken towards this end:

1. Awareness Campaigns - In order to educate the stakeholders about the importance of data privacy, various awareness campaigns should be launched through digital media, print media, and seminars. These campaigns must include topics such as why data privacy is important, the consequences of not adhering to the policy, and how to comply with it.
2. Training - In addition to awareness campaigns, proper training should be provided to all stakeholders on data privacy policies and procedures. The training should also focus on best practices such as secure coding, encryption techniques etc., so that they understand the importance of these security measures in protecting data from unauthorized access.
3. Policies and Procedures - All stakeholders should have access to a clear set of policies and procedures governing their actions related to data privacy. Such guidelines should include information about the types of sensitive information which needs to be kept confidential, what constitutes a violation of the policy, and how to take corrective measures if a violation occurs.

4. Auditing - The effectiveness of all the policies and procedures should be regularly audited in order to ensure that the data privacy policy is being followed properly. Any discrepancies or violations must be reported immediately so that appropriate action can be taken.

5. Reporting Mechanism - A reporting mechanism should also be put into place for stakeholders to report any suspected errors or breaches in data privacy policies. This will help in identifying potential risks early on and taking corrective action as soon as possible. These initiatives will not only reduce confusion among relationship and function heads but will also help build trust with customers by ensuring proper implementation of enterprise-wide privacy program, which in turn will help the company in leveraging outsourcing opportunities. Lastly, by following all these measures, the company will be able to demonstrate its commitment towards privacy and create a secure environment for its customers.

In conclusion, in order to ensure that policy is well understood and deployed, it is important to take appropriate steps such as launching awareness campaigns, providing training to stakeholders on data privacy policies, auditing policies and procedures regularly, and setting up a reporting mechanism for errors or breaches. Doing so will reduce confusion among relationship and function heads and help build trust with customers by ensuring proper implementation of an enterprise-wide privacy program.

### NEW QUESTION # 30

What are key issues in the policy design process? (upto 250 words)

D. None of the above

**Answer:**

Explanation:

See the answer in explanation below.

Explanation:

The PI policy (or for that matter any policy) needs to be purpose driven, clear, concise, easily accessible to be effective. Ideally the PI policy controls needs to be implemented as a part of the overall operations process so that the implementation of this policy is

automatic. In this case, the issues with the policy design process was

1. the policy was a generic and common policy for all the business functions/unit. Such policies become lengthy, complex and deters the policy subjects from adopting it.
2. All the client relationships and business functions are unique. They differ in their purpose, objectives, process and hence also in the type of the information then collect and process. The policy should be easy and customized for each department.
3. The policy is published on the intranet portal. There is no guarantee that the policy is read and consumed by all desired stakeholder. As opposed to this, this policy matter should be made relevant and customized for the stakeholders and be PUSHED to them against them PULLING it at their discretion.
4. The roles and responsibilities, accountability and penalty for each stakeholders should be defined clearly so there is no confusion in the adherence to the policy.
5. The training workshop was generic and was short. It was not completed in time. the training program should be customized and contextual to the department people that are being trained. the program should be conducted in a very professional environment and method.
6. Since the policy, purpose, roles and responsibilities were not clear, the training program did not go well.

### NEW QUESTION # 31

Which of the following does the 'Privacy Strategy and Processes' layer in the DPF help accomplish? (Choose all that apply.)

- A. Regulatory Compliance Intelligence
- B. Privacy Policy and Processes
- C. Information Usage and Access
- D. Visibility over Personal Information
- E. Personal Information Security

**Answer: A,B,D**

Explanation:

The 'Privacy Strategy and Processes' layer within the DSCI Privacy Framework (DPF) is designed to support the development of:

- \* A structured privacy governance model
- \* Visibility over personal information and processing flows (A)
- \* Organizational privacy policies and operational processes (B)
- \* Mechanisms for understanding and addressing regulatory obligations (C) While Information Usage and Access (D) and Personal Information Security (E) are important aspects of privacy management, they fall under different layers such as 'Data Life Cycle Management' and 'Security Controls' respectively, rather than the Strategy and Processes layer.

### NEW QUESTION # 32

FILL BLANK

MIM

The company has a well-defined and tested Information security monitoring and incident management process in place. The process has been in place since last 10 years and has matured significantly over a period of time. There is a Security Operations Centre (SOC) to detect security incidents based on well-defined business rules.

The security incident management is based on ISO 27001 and defines incident types, alert levels, roles and responsibilities, escalation matrix, among others. The consultants advised company to realign the existing monitoring and incident management to cater to privacy requirements. The company consultants sought help of external privacy expert in this regard.

(Note: Candidates are requested to make and state assumptions wherever appropriate to reach a definitive conclusion) Introduction and Background XYZ is a major India based IT and Business Process Management (BPM) service provider listed at BSE and NSE. It has more than 1.5 lakh employees operating in 100 offices across 30 countries. It serves more than 500 clients across industry verticals - BFSI, Retail, Government, Healthcare, Telecom among others in Americas, Europe, Asia-Pacific, Middle East and Africa. The company provides IT services including application development and maintenance, IT Infrastructure management, consulting, among others. It also offers IT products mainly for its BFSI customers.

The company is witnessing phenomenal growth in the BPM services over last few years including Finance and Accounting including credit card processing, Payroll processing, Customer support, Legal Process Outsourcing, among others and has rolled out platform based services. Most of the company's revenue comes from the US from the BFSI sector. In order to diversify its portfolio, the company is looking to expand its operations in Europe. When it comes to expanding operations in Europe, company is facing difficulties in realizing the full potential of the market because of privacy related concerns of the clients arising from the stringent regulatory requirements based on EU General Data Protection Regulation (EU GDPR).

To get better access to this market, the company decided to invest in privacy, so that it is able to provide increased assurance to potential clients in the EU and this will also benefit its US operations because privacy concerns are also on rise in the US. It will also help company leverage outsourcing opportunities in the Healthcare sector in the US which would involve protection of sensitive medical records of the US citizens.

The company believes that privacy will also be a key differentiator in the cloud business going forward. In short, privacy was taken up as a strategic initiative in the company in early 2011.

Since XYZ had an internal consulting arm, it assigned the responsibility of designing and implementing an enterprise wide privacy program to the consulting arm. The consulting arm had very good expertise in information security consulting but had limited expertise in the privacy domain. The project was to be driven by CIO's office, in close consultation with the Corporate Information Security and Legal functions.

If you were the privacy expert advising the company, what steps would you suggest to realign the existing security monitoring and incident management to address privacy requirements especially those specific to client relationships? (250 to 500 words)

**Answer:**

Explanation:

See the answer in explanation below.

Explanation:

As an external privacy expert, the first step I would suggest for XYZ company is to conduct a detailed assessment of their existing security monitoring and incident management processes. This should include an analysis of how data is collected, stored, and accessed; what kind of policies are currently in place; and any other relevant security measures. It should also identify areas where additional process or technical changes may be required to meet privacy requirements.

Once the initial assessment has been completed, I would recommend that XYZ take steps to ensure that its processes align with applicable laws and regulations regarding data protection, such as EU GDPR. For example, they should update their policies around data collection and storage so that they comply with GDPR's requirements on consent and purpose limitation. Additionally, XYZ should ensure that their systems are secure and only authorized personnel can access the data.

Also I would suggest that XYZ develop a comprehensive incident response plan, indicating how they will address any data breaches or other privacy incidents. The plan should include steps for notification to affected individuals or organizations, containment of the incident, investigations into its cause and scope, and remediation efforts to prevent similar incidents in the future.

Lastly I would recommend that XYZ review their client contracts to ensure that they clearly describe the company's commitments regarding data protection and security measures. This could include GDPR- compliant language on consent forms as well as clauses committing to regularly audit and update processes as necessary. These contractual terms will help protect both XYZ and their clients in the event of a privacy breach.

In conclusion, implementing these steps will help XYZ establish an effective privacy program that meets all applicable legal requirements, protects their clients' data, and provides them with a competitive edge in the market. Additionally, it will ensure that they remain compliant and have appropriate measures in place to address any potential issues. By taking these proactive measures now, XYZ can ensure that they continue to successfully operate in both the EU and US markets while protecting the privacy of its customers.

### NEW QUESTION # 33

Which of the following parameters should ideally be addressed by a privacy program of an organization?

(Choose all that apply.)

- A. Training and data classification
- B. Environmental security concerns
- C. Intellectual Property (IP) protection
- D. Privacy incident response plan and grievance handling

**Answer: A,D**
