질문 # 52

Cumulus Insurance has created a Delegated Administrator group for its franchise users to reduce the workload on head office support staff.

Which three functions should be added to the Delegated Administrator group?

- A. Create and manage membership of specified public groups.
- B. Unlock users.
- C. Set organization-wide sharing defaults on custom objects.
- D. Assign or remove permission sets for users in their delegated groups.
- E. Modify permission sets.

정답: A,B,D

설명:

Explanation

The following functions should be added to the Delegated Administrator group for its franchise users:

Unlock users, which is a function that allows delegated administrators to unlock users who have been locked out due to incorrect login attempts or password expiration.

Assign or remove permission sets for users in their delegated groups, which is a function that allows delegated administrators to grant or revoke additional permissions for users in their delegated groups by using permission sets.

Create and manage membership of specified public groups, which is a function that allows delegated administrators to create public groups for sharing purposes and add or remove users from those groups.

질문 # 53

Omni Script represents processes with fast, personalized, and consistent responses. This type extends the metadata type and inherits its full name field. To use the Omni Script metadata type, what should the administrator enable in the Salesforce org?

- A. Custom Domain
- B. Lightning Experience for Financial Services Cloud
- C. Einstein Relationship Insights
- D. Discovery Framework

정답: A

질문 # 54

Which three permission sets grant access or extend permissions for record alerts in Financial Services Cloud (FSC)?

- A. FSC Standard permission set
- B. FSC Basic permission set
- C. OmniStudio Admin permission set
- D. OmniStudio User permission set
- E. FSC Foundations permission set

정답: A,D,E

설명:

Record alerts are a feature of Financial Services Cloud that let users create and display alerts on record pages to highlight important

information or actions. Record alerts are based on OmniStudio, a low-code platform for building digital experiences in Salesforce. To access or extend permissions for record alerts in Financial Services Cloud, users need to have one of the following permission sets: FSC Standard permission set: This permission set grants access to the core features of Financial Services Cloud, including record alerts. Users with this permission set can view and create record alerts on supported objects, such as accounts, contacts, financial accounts, and opportunities¹.

FSC Foundations permission set: This permission set grants access to the common features of Financial Services Cloud that are shared across subverticals, such as retail banking, wealth management, and insurance. Users with this permission set can view and create record alerts on supported objects².

OmniStudio User permission set: This permission set grants access to the OmniStudio features, such as OmniScripts, DataRaptors, Integration Procedures, and Record Alerts. Users with this permission set can view and create record alerts on any object that has the Record Alert component enabled³.

질문 # 55

A private equity company with only one administrator wants to upgrade Financial Services Cloud (FSC) from a Sales Cloud Unlimited Edition (UE) org. The company decided to install FSC greenfield on a new org to minimize the transfer of existing tech debt. In preparation for data migration, the administrator has been exporting backup files of the current org for a month. What should the administrator do as part of the preparation for the data migration process?

- A. The administrator can ask the business manager on the investment bank team to review the file directly.
- B. As a dry run, the administrator can test this process via a data export request from the primary sandbox to the existing Sales Cloud UE org.
- C. To start, the administrator can run a daily backup data export for a week, then continue to run this job weekly until they are ready for data migration.
- D. After running the backup data export manually for 2 weeks, the administrator can schedule this job to run weekly every Sunday to review the file on Mondays at the start of the week for data comparisons/analysis.

정답: C

설명:

Explanation

As part of the preparation for the data migration process, the administrator should run a daily backup data export for a week, then continue to run this job weekly until they are ready for data migration. This is a best practice for data migration in Salesforce that allows the administrator to identify the data they want to migrate, create templates for the data, prepare the destination org, and validate the data². By running a daily backup data export for a week, the administrator can capture any changes or updates in the data and compare them with previous exports. By continuing to run this job weekly until they are ready for data migration, the administrator can ensure that they have the most recent and accurate data to migrate into Financial Services Cloud.
