ExamDiscuss's Salesforce Manufacturing-Cloud-Professional exam training materials are absolutely give you a true environment of the test preparation. Our material is highly targeted, just as tailor-made for you. With it you will become a powerful IT experts. ExamDiscuss's Salesforce Manufacturing-Cloud-Professional Exam Training materials will be most suitable for you. Quickly registered ExamDiscuss website please, I believe that you will have a windfall.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34
The Financial Team ut Budger Power wants to be sure to pay out Rebates on Invoices that has Status Paid within Rebate nagemen How can an Admin ensure that this requirement is fulfilled?

- A. Create a custom field in Transaction Journal, copy Invoice Status data into custom field, then use as an eligibility condition in Rebate Types
- B. Update Data Processing Engine job to filter out transactions where Invoice status does not Paid
- C. Additional steps are not needed Only transactions with Status = Paid are included in the Journal,
- D. Validate invoice status in ERP before bringing into Salesforce.

Answer: D

Explanation:
Explanation
To ensure that only invoices with status paid are included in the rebate calculation, the admin should validate the invoice status in the ERP system before bringing the data into Salesforce. This way, the admin can avoid importing unnecessary or inaccurate data that might affect the rebate performance and payout. The other options are not feasible or efficient because:
* Option B is incorrect because transactions with any status are included in the journal by default. The admin needs to set up eligibility conditions in the rebate types to filter out transactions based on status or other criteria1.
* Option C is incorrect because creating a custom field in the transaction journal and copying the invoice status data into it is redundant and time-consuming. The invoice status is already available as a standard field in the transaction journal object2.
* Option D is incorrect because updating the data processing engine job to filter out transactions based on
* invoice status is not possible. The data processing engine job is used to process the data from the transaction journal into the rebate journal, and it does not have any filtering options3.
References: 1: Rebate Types 2: Transaction Journal 3: Data Processing Engine

NEW QUESTION # 35
An Account Manager at Badger Power wants to renew their current Sales Agreement. When can the Sales Agreement renewal occur?

- A. Only when the sales agreement regenerates.
- B. Only when the new fiscal period starts.
- C. Only when the renewal period ends.

- D. Only when the renewal period starts.
- E. Only when the sales agreement recalculates.

Answer: D

Explanation:
Salesforce Manufacturing Cloud allows users to define the renewal period for sales agreements in their org.
The renewal period is the number of days before the end date of a sales agreement from when users can renew the agreement.
Users can renew a sales agreement only when the renewal period starts. The other options are not related to the renewal of sales agreements. References: Define Renewal Period for Sales Agreements

NEW QUESTION # 36
Which two objects do not support triggers?

- A. Account Product Forecast (APF)
- B. Account Product Period Forecast (APPF)
- C. Account Forecast (AF)
- D. Account Forecast Adjustments (AFA)

Answer: A,B

NEW QUESTION # 37
When discussing the business requirements for a Manufacturing Cloud implementation design, what is a consideration when analyzing data in existing third-party systems?

- A. Determine the system of record for each data category required by the business.
- B. Identify the capabilities of different data integration tools.
- C. Define current processes required by the business.

Answer: A

Explanation:
: When designing a Manufacturing Cloud implementation, it is important to consider the data sources and quality of the existing third-party systems that will be integrated with Manufacturing Cloud. One of the key considerations is to determine the system of record for each data category required by the business, such as customer information, product data, order history, inventory levels, and so on. The system of record is the authoritative source of data that is trusted and maintained by the business. By identifying the system of record for each data category, you can ensure data consistency, accuracy, and integrity across the integrated systems. You can also avoid data duplication, conflicts, and errors that may arise from having multiple sources of data for the same category.

NEW QUESTION # 38
Partner managers from Universal Containers (UC) are performing onsite visits to their distribution partners.
During the visit they have a goal of getting partners to renew the terms of their sales agreements with UC.
Leadership wants to understand how effective these in-person visits are in getting partners to renew. They would also like to standardize the tasks to be performed during these visits and report on this data in Salesforce.
Which features should a Manufacturing Cloud consultant recommend to meet these requirements?

- A. Partner Visit Management, Action Plans, and Generic Visit Key Performance Indicators
- B. Partner Visit Management, Experience Cloud, and Service Console for Manufacturing
- C. Partner Visit Management, Advanced Account Forecasting, and CRM Analytics for Manufacturing

Answer: A

Explanation:
To meet the requirements of UC, a Manufacturing Cloud consultant should recommend the following features:
Partner Visit Management, Action Plans, and Generic Visit Key Performance Indicators. Partner Visit Management helps sales managers schedule visits to dealer and distributor locations, monitor performance, follow up on sales agreements, and capture key metrics1. Action Plans allow sales managers to create lists of tasks and associated assessment indicators that are commonly

repeated across multiple visits2. Generic Visit Key Performance Indicators enable sales managers to compare the expected metrics versus the actual metrics for the key performance indicators they defined and then take necessary actions3. These features help UC to standardize the tasks to be performed during visits, understand how effective these visits are in getting partners to renew, and report on this data in Salesforce. The other features are not relevant for the given scenario. Advanced Account Forecasting is used to create holistic forecasts based on sales agreements, orders, opportunities, and account metrics4. CRM Analytics for Manufacturing is used to gain insights into sales performance, pipeline health, and customer satisfaction. Experience Cloud is used to create branded digital experiences for customers, partners, and employees. Service Console for Manufacturing is used to provide customer service and support across multiple channels.
