APICS Certified in Planning and Inventory Management (CPIM 8.0) Sample Questions (Q483-Q488):

NEW QUESTION # 483

A security engineer is implementing an authentication system for a new web application. The authentication requirements include the ability for a server to authenticate the client and for the client to authenticate the server. Which of the following choices BEST supports this requirement?

- A. Virtual Private Network (VPN)
- **B. Transport Layer Security (TLS)**
- C. Secure Shell (SSH)
- D. Trusted Platform Module (TPM)

Answer: B

NEW QUESTION # 484

Plans are being made to move an organization's software systems to the cloud in order to utilize the flexibility and scalability of the cloud. Some of these software systems process highly sensitive data. The organization must follow strict legal requirements regarding the location of the highly sensitive data processed by the software systems. Which cloud model will BEST fit the organization's requirements?

- A. Public cloud
- B. Multicloud
- **C. Hybrid cloud**
- D. Private cloud

Answer: C

NEW QUESTION # 485

During a threat modeling exercise using the Spoofing, Tampering, Repudiation, Information Disclosure, Denial of Service, and Elevation of Privilege (STRIDE) framework, it was identified that a web server allocates a socket and forks each time it receives a request from a user without limiting the number of connections or requests.

Which of the following security objectives is MOST likely absent in the web server?

- A. Authenticity
- **B. Availability**
- C. Authorization
- D. Integrity

Answer: B

NEW QUESTION # 486

Which of the following are steps involved in the identity and access provisioning lifecycle?

- A. Provisioning, Dissemination, revocation
- B. Dissemination, rotation, revocation
- **C. Provisioning, review, revocation**
- D. Dissemination, review, revocation

Answer: C

NEW QUESTION # 487

The horizon for forecasts that are input to the sales and operations planning (S&OP) process should be long enough that:

- A. supply constraints can be resolved.

- B. planned product launches can be incorporated.
- C. cumulative forecast deviation approaches zero.
- D. required resources can be properly planned.

Answer: D

Explanation:

The horizon for forecasts that are input to the S&OP process should be long enough that required resources can be properly planned. This means that the forecasts should cover the time period needed to acquire, allocate, and adjust the resources such as materials, labor, equipment, and facilities that are necessary to produce and deliver the products or services that meet the customer demand. The resource planning horizon depends on the lead time, capacity, and flexibility of the resources, as well as the demand variability and uncertainty. A longer horizon allows for more accurate and proactive resource planning, which can improve the efficiency, effectiveness, and profitability of the S&OP process¹².
