If you need the NCP-CI-AWS training material to improve the pass rate, our company will be your choice. NCP-CI-AWS training materials of our company have the information you want, we have the answers and questions. Our company is pass guarantee and money back guarantee. We also have free demo before purchasing. Compared with the paper one, you can receive the NCP-CI-AWS Training Materials for about 10 minutes, you don't need to waste the time to wait.

Nutanix NCP-CI-AWS Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Prepare the AWS cloud environment: This exam segment evaluates your ability to set up the AWS cloud environment, initiate NC2 service subscription, establish implementation criteria, and recognize networking prerequisites.
Topic 2	<ul style="list-style-type: none">• Configuring an NC2 on AWS Environment: This section examines your proficiency in setting up cloud networking and security measures, as well as addressing connectivity issues.
Topic 3	<ul style="list-style-type: none">• Deploying an NC2 on AWS Environment: This portion assesses your knowledge of cloud cluster deployment, cloud provider network configuration, and your skills in addressing cluster deployment challenges.
Topic 4	<ul style="list-style-type: none">• Managing an NC2 on AWS Environment: This exam component tests your understanding of node and cluster management tasks, along with your ability to oversee cluster and cloud resource health.

100% Pass Quiz 2026 Authoritative NCP-CI-AWS: Reliable Nutanix Certified Professional - Cloud Integration - AWS Exam Blueprint

Our NCP-CI-AWS exam torrent is available in different versions. Whether you like to study on a computer or enjoy reading paper materials, our test prep can meet your needs. Our PDF version of the NCP-CI-AWS quiz guide is available for customers to print. You can print it out, so you can practice it repeatedly conveniently. And our NCP-CI-AWS exam torrent make it easy for you to take notes on it so that your free time can be well utilized and you can often consolidate your knowledge. Everything you do will help you successfully pass the exam and get the card. The version of APP and PC of our NCP-CI-AWS Exam Torrent is also popular. They can simulate real operation of test environment and users can test NCP-CI-AWS test prep in mock exam in limited time. They are very practical and they have online error correction and other functions. The characteristic that three versions of NCP-CI-AWS exam torrent all have is that they have no limit of the number of users, so you don't encounter failures anytime you want to learn our NCP-CI-AWS quiz guide. The three different versions can help customers solve any questions and meet their all needs.

Nutanix Certified Professional - Cloud Integration - AWS Sample Questions (Q43-Q48):

NEW QUESTION # 43

An administrator is tasked with enabling inbound internet access to two Virtual Servers in an NC2 cluster on AWS for the HTTPs protocol.

The cluster is configured with:

- * 8 nodes
- * Prism Central
- * 3 x User VM subnets

All subnets have been configured and can communicate with Internet-based resources as well as on-premises servers. The company d to allow Internet access, so the administrator must implement an AWS solution.

Which approach will enable the necessary communication?

- **A. Create a AWS Network Load Balancer, configure the listener TCP port as 443, create a target group and register an HP as the endpoint.**
- B. Create a WS Network Load Balancer, configure the listener TCP port as 80, create a target group and register the servers as the endpoint
- C. Create a AWS Network Load Balancer, configure the listener TCP port as 80, create a target group and register the servers as targets.
- D. Create a AWS Network Load Balancer, configure the lister TCP port as 433, create a target group and register an EIP as the Endpoint.

Answer: A

Explanation:

To enable inbound internet access to Virtual Servers in an NC2 cluster on AWS for the HTTPS protocol, the administrator should use an AWS Network Load Balancer (NLB).

Configure the NLB listener to listen on TCP port 443, which is the standard port for HTTPS traffic.

Create a target group in AWS, and register the servers (Virtual Servers in the NC2 cluster) as targets within this group.

Ensure the NLB is properly configured with an Elastic IP (EIP) if required, to provide a static IP address for the load balancer.

Verify that the security groups and network ACLs associated with the load balancer and the target group allow inbound traffic on port 443.

Reference:

Refer to AWS documentation on Network Load Balancers and Nutanix NC2 on AWS integration guides for step-by-step instructions on setting up and configuring the necessary components for enabling HTTPS access.

NEW QUESTION # 44

An administrator has been tasked with deploying a new production NC2 cluster on AWS and is studying the deployment.. AWS supports EC2 bare-metal instances in regions with at least how many partitions?

- A. 0
- **B. 1**

- C. 2
- D. 3

Answer: B

Explanation:

AWS supports EC2 bare-metal instances in regions with at least 3 partitions. Partitions in AWS provide high availability and fault tolerance by distributing instances across different hardware to minimize the impact of hardware failures.

AWS Regions and Availability Zones

NEW QUESTION # 45

An administrator is seeking help with an ongoing NC2 issue. After reaching out to Nutanix support, the administrator is introduced to NC2 specialist who can help troubleshoot the problem.

- A. Confirm the Support Authorization on the organization is set to Full Access.
- B. Add the specialist as an admin user to the organizations.
- C. Ensure the specialist is assigned the RBAC role with proper permissions.
- D. Provide the specialist with the administrator's login credentials.

Answer: A,C

Explanation:

Ensure the specialist is assigned the RBAC role with proper permissions (Answer A):

Role-Based Access Control (RBAC) ensures that the specialist has the necessary permissions to troubleshoot and manage the NC2 environment. This avoids unnecessary privilege escalations and maintains security.

Confirm the Support Authorization on the organization is set to Full Access (Answer C):

Setting the Support Authorization to Full Access allows the Nutanix support specialist to have the required access to investigate and resolve issues in the environment. This is essential for effective troubleshooting.

NEW QUESTION # 46

An administrator is considering an NC2 cluster deployment within AWS. Specifically, the administrator is concerned about North-South traffic (exiting or entering the Nutanix VPC), such as internet-bound network traffic between the user VPC and the AWS VPC. How is this traffic routed in an NC2 on AWS deployment?

- A. AWS Default Gateway
- B. Single Node for all VPCs
- C. Nutanix Default Gateway
- D. Distributed gateway model

Answer: D

Explanation:

In an NC2 on AWS deployment using Flow Virtual Networking (FVN), North-South traffic (traffic moving into or out of the Nutanix VPC) is handled via a distributed gateway model. Unlike traditional setups that might rely on a single bottleneck node, the distributed gateway model allows each Nutanix node in the cluster to participate in routing traffic to the AWS VPC router. This architecture provides high availability and scales performance linearly as nodes are added to the cluster. By distributing the gateway function, Nutanix ensures that no single point of failure exists for internet-bound or cross-VPC traffic, optimizing the path between Nutanix User VMs and native AWS services or the public internet.

NEW QUESTION # 47

An administrator has deployed an NC2 cluster on AWS to an existing environment for VDI.

Afterwards, the corporate security teams direct the administrator to reuse an existing AWS subnet, 10.79.4.0

/24 that has two EC2 instances: EC2-1 (10.79.4.200) and EC2-2 (10.79.4.201). The security team indicates that this directive is to avoid overlap with the AHV IPAM.

Which two configuration actions should the administrator take to ensure there are no configuration issues?
(Choose two.)

- A. aCLI > net.add_to_ip_blacklist 10.79.4.200 aCLI > net.add_to_ip_blacklist 10.79.4.201
- B. Deploy two VMs on the NC2 cluster and assign 10.79.4.200 and 10.79.4.201 as the assigned IPs in Prism Element
- C. aCLI > net.delete_from_ip_blacklist 10.79.4.200 aCLI > net.delete_from_ip_blacklist 10.79.4.201
- D. Configure the AHV IPAM to use DHCP range 10.79.4.2 -10.79.4.253.

Answer: A,D

Explanation:

To avoid IP address conflicts and ensure there are no configuration issues when reusing an existing AWS subnet, the administrator should take the following actions:

* aCLI > net.add_to_ip_blacklist 10.79.4.200 aCLI > net.add_to_ip_blacklist 10.79.4.201 (Answer A):

* This command adds the specified IP addresses to the blacklist, preventing AHV IPAM from assigning these addresses to any VMs. This ensures that the existing EC2 instances with IPs

10.79.4.200 and 10.79.4.201 are not allocated to other VMs in the NC2 cluster.

* Configure the AHV IPAM to use DHCP range 10.79.4.2 -10.79.4.253 (Answer D):

* By configuring the AHV IPAM to use a specific DHCP range, you ensure that the IP addresses assigned to the EC2 instances (10.79.4.200 and 10.79.4.201) are not included in the DHCP pool.

This prevents IP address conflicts within the subnet.

NEW QUESTION # 48

.....

There are two big in the NCP-CI-AWS exam questions -- software and online learning mode, these two models can realize the user to carry on the simulation study on the NCP-CI-AWS study materials, fully in accordance with the true real exam simulation, as well as the perfect timing system, at the end of the test is about to remind users to speed up the speed to solve the problem, the NCP-CI-AWS Training Materials let users for their own time to control has a more profound practical experience, thus effectively and perfectly improve user efficiency to pass the NCP-CI-AWS exam.
