2026 Efficient AZ-700: Designing and Implementing Microsoft Azure Networking Solutions Exam Questions Answers

If you don't have enough time to study for your certification exam, TestkingPass provides Designing and Implementing Microsoft Azure Networking Solutions AZ-700 PDF Questions. You may quickly download Designing and Implementing Microsoft Azure Networking Solutions AZ-700 exam questions in PDF format on your smartphone, tablet, or desktop. You can Print Microsoft pdf questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q27-Q32):

NEW QUESTION # 27

You have an Azure subscription. The subscription contains multiple Azure SQL Database resources and a virtual network named VNet1 that has five subnets. All the subnets are associated with a network security group (NSG) named NSG1. NSG1 blocks all outbound traffic, unless specifically allowed by a rule.

Each subnet contains 50 virtual machines. Multiple virtual machines host instances of SQL Server on Virtual Machines and will be configured to replicate with the Azure SQL Database resources.

You need to configure a new outbound rule in NSG1 to allow the SQL Server on Virtual Machines instances to connect to the Azure SQL Database resources. The solution must meet the following requirements:

- * Minimize modifications to NSG1 when additional instances of SQL Server on Virtual Machines are deployed.
- * Ensure that only SQL Server on Virtual Machines instances can connect to the Azure SQL Database resources.

How should you configure each setting for the new outbound rule? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 28

You need to recommend a configuration for the ExpressRoute connection from the Boston datacenter. The solution must meet the hybrid networking requirements and business requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 29

You have the Azure load balancer shown in the Load Balancer exhibit.

LB2 has the backend pools shown in the Backend Pools exhibit.

You need to ensure that LB2 distributes traffic to all the members of VMSS1.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add a public IP address to each member of VMSS1.
- **B. Add a load balancing rule.**
- C. Add a network interface to VMSS1.
- **D. Configure a health probe.**

Answer: B,D

NEW QUESTION # 30

You have an Azure application gateway named AppGW1 that provides access to the following hosts:

* www.adatum.com

* www.contoso.com

* www.fabrikam.com

AppGW1 has the listeners shown in the following table.

You create Azure Web Application Firewall (WAF) policies for AppGW1 as shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:
