New Fortinet FCP_FMG_AD-7.4 Exam Pattern | Valid Real FCP_FMG_AD-7.4 Exam

Probably you've never imagined that preparing for your upcoming FCP_FMG_AD-7.4 Exam could be easy. The good news is that our FCP_FMG_AD-7.4 exam braindumps can help you pass the exam and achieve the certification withe the least time and efforts. The excellent FCP_FMG_AD-7.4 learning questions are the product created by those professionals who have extensive experience of designing exam study material. Just remind you that we have engaged in the career for over ten years and we have became the leader in this field.

Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q39-Q44):

NEW QUESTION # 39
What happens if you create an ADOM with version 7.2, add FortiGate devices running FortiOS 7.2, and then upgrade the FortiGate devices to FortiOS 7.4?

- A. The ADOM restricts access to devices running lower firmware versions.
- B. The ADOM can concurrently manage FortiGate devices running different firmware versions.
- C. Adding higher version FortiGate devices to a lower version ADOM triggers an automatic ADOM upgrade.
- D. Upgrading the FortiGate devices to FortiOS 7.4 may result in ADOM database corruption.

Answer: B

NEW QUESTION # 40
Which configuration setting for FortiGate is part o an ADOM-level database on FortiManager?

- A. Routing
- B. Security profiles
- C. SNMP
- D. NSX-T Service Template

Answer: B

Explanation:
Security profiles are part of the ADOM-level database in FortiManager. These configurations allow for centralized management of security settings like antivirus, web filtering, application control, and intrusion prevention. Security profiles are created and managed under the Policy & Objects section, which operates at the ADOM level.

NEW QUESTION # 41
Push updates are failing on a FortiGate device that is located behind a NAT device. Which two settings should the administrator

check? (Choose two.)

- A. That the external IP address on the NAT device is set to DHCP and configured with the virtual IP
- B. That the override server IP address is set on FortiManager and the NAT device
- C. That the virtual IP address and correct ports are set on the NAT device
- D. That the NAT device IP address and correct ports are configured on FortiManager

Answer: C,D

Explanation:
When push updates are failing on a FortiGate device behind a NAT device, the administrator should check:
* A. That the override server IP address is set on FortiManager and the NAT device.
* The override server IP should be configured to ensure that FortiManager uses the correct IP address that can traverse the NAT to reach the FortiGate device.
* D. That the virtual IP address and correct ports are set on the NAT device.
* The NAT device must have the correct virtual IP (VIP) configured to map the FortiGate's internal IP to an external address, along with the correct ports needed for communication.
Options B and C are incorrect because:
* B suggests setting the external IP on the NAT device to DHCP, which is not relevant to solving the push update issue.
* C implies configuring NAT device IP and ports on FortiManager, which is less likely needed compared to configuring the correct VIP and ports.
FortiManager References:
* Refer to FortiManager 7.4 Administrator Guide: Device Management and NAT Configuration.

NEW QUESTION # 42
Refer to the exhibit.

In the event that one of the secondary FortiManager devices fails, which action must be performed to return the FortiManager HA manual mode to a working state?

- A. Reboot the failed device to remove its IP from the primary device.
- B. Manually promote one of the working secondary devices to the primary role, and reboot the old primary device to remove

the peer IP of the failed device.
- C. The FortiManager HA state transition is transparent to administrators and does not require any reconfiguration.
- D. Reconfigure the primary device to remove the peer IP of the failed device.

Answer: D

NEW QUESTION # 43

When an installation is performed from FortiManager, what is the recovery logic used between FortiManager and FortiGate for an FGFM tunnel?

- A. FortiManager will revert and install a previous configuration revision on the managed FortiGate.
- B. FortiGate will reject the CLI commands that will cause the tunnel to go down.
- C. FortiManager will not push the CLI commands as part of the installation that will cause the tunnel to go down.
- D. After 15 minutes, FortiGate will unset all CLI commands that were part of the installation that caused the tunnel to go down.

Answer: D

NEW QUESTION # 44

......

All FCP_FMG_AD-7.4 learning materials fall within the scope of this exam for your information. The content is written promptly and helpfully because we hired the most professional experts in this area to compile the FCP_FMG_AD-7.4 Preparation quiz. And our experts are professional in this career for over ten years. Our FCP_FMG_AD-7.4 practice materials will be worthy of purchase, and you will get manifest improvement.
