

Reliable CWSP-208 Mock Test | Demo CWSP-208 Test

BTW, DOWNLOAD part of ValidTorrent CWSP-208 dumps from Cloud Storage: <https://drive.google.com/open?id=1cSHxp73v8NQtdgQE19thFcQI7YELqL>

Our company provide free download and tryout of the CWSP-208 study materials and update the CWSP-208 study materials frequently to guarantee that you get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our CWSP-208 Study Materials are compiled by the experienced professionals elaborately. Our product boosts many advantages and to gain a better understanding of our CWSP-208 study materials please read the introduction of the features and the functions of our product as follow.

CWNP CWSP-208 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security Lifecycle Management: This section of the exam assesses the performance of a Network Infrastructure Engineer in overseeing the full security lifecycle—from identifying new technologies to ongoing monitoring and auditing. It examines the ability to assess risks associated with new WLAN implementations, apply suitable protections, and perform compliance checks using tools like SIEM. Candidates must also demonstrate effective change management, maintenance strategies, and the use of audit tools to detect vulnerabilities and generate insightful security reports. The evaluation includes tasks such as conducting user interviews, reviewing access controls, performing scans, and reporting findings in alignment with organizational objectives.

Topic 2	<ul style="list-style-type: none"> • WLAN Security Design and Architecture: This part of the exam focuses on the abilities of a Wireless Security Analyst in selecting and deploying appropriate WLAN security solutions in line with established policies. It includes implementing authentication mechanisms like WPA2, WPA3, 802.1X • EAP, and guest access strategies, as well as choosing the right encryption methods, such as AES or VPNs. The section further assesses knowledge of wireless monitoring systems, understanding of AKM processes, and the ability to set up wired security systems like VLANs, firewalls, and ACLs to support wireless infrastructures. Candidates are also tested on their ability to manage secure client onboarding, configure NAC, and implement roaming technologies such as 802.11r. The domain finishes by evaluating practices for protecting public networks, avoiding common configuration errors, and mitigating risks tied to weak security protocols.
Topic 3	<ul style="list-style-type: none"> • Security Policy: This section of the exam measures the skills of a Wireless Security Analyst and covers how WLAN security requirements are defined and aligned with organizational needs. It emphasizes evaluating regulatory and technical policies, involving stakeholders, and reviewing infrastructure and client devices. It also assesses how well high-level security policies are written, approved, and maintained throughout their lifecycle, including training initiatives to ensure ongoing stakeholder awareness and compliance.
Topic 4	<ul style="list-style-type: none"> • Vulnerabilities, Threats, and Attacks: This section of the exam evaluates a Network Infrastructure Engineer in identifying and mitigating vulnerabilities and threats within WLAN systems. Candidates are expected to use reliable information sources like CVE databases to assess risks, apply remediations, and implement quarantine protocols. The domain also focuses on detecting and responding to attacks such as eavesdropping and phishing. It includes penetration testing, log analysis, and using monitoring tools like SIEM systems or WIPS • WIDS. Additionally, it covers risk analysis procedures, including asset management, risk ratings, and loss calculations to support the development of informed risk management plans.

Demo CWNP CWSP-208 Test | CWSP-208 Latest Test Experience

The Certified Wireless Security Professional (CWSP) practice exam material is available in three different formats i.e CWNP CWSP-208 dumps PDF format, web-based practice test software, and desktop CWSP-208 practice exam software. PDF format is pretty much easy to use for the ones who always have their smart devices and love to prepare for CWSP-208 Exam from them. Applicants can also make notes of printed Certified Wireless Security Professional (CWSP) (CWSP-208) exam material so they can use it anywhere in order to pass CWNP CWSP-208 Certification with a good score.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q47-Q52):

NEW QUESTION # 47

What TKIP feature was introduced to counter the weak integrity check algorithm used in WEP?

- A. Block cipher support
- B. 32-bit ICV (CRC-32)
- **C. Michael**
- D. Sequence counters
- E. RC5 stream cipher

Answer: C

Explanation:

TKIP (used with WPA) introduced "Michael" as a message integrity check (MIC) algorithm to replace the insecure CRC-32 used in WEP. Michael:

Adds tamper protection to each packet.

Helps detect packet forgery.

Incorrect:

A). CRC-32 was used in WEP and proven weak.

- B). Sequence counters help prevent replay attacks, not integrity checking.
- C). RC5 is not used in WLAN security.
- E). TKIP does not support block ciphers-it uses RC4, a stream cipher.

CWSP-208 Study Guide, Chapter 3 (TKIP Security Features)

NEW QUESTION # 48

What software and hardware tools are used together to hijack a wireless station from the authorized wireless network onto an unauthorized wireless network? (Choose 2)

- A. RF jamming device and a wireless radio card
- B. A low-gain patch antenna and terminal emulation software
- C. MAC spoofing software and MAC DoS software
- D. DHCP server software and access point software
- E. A wireless workgroup bridge and a protocol analyzer

Answer: A,D

Explanation:

To hijack a wireless client, attackers often use:

An RF jamming device to disconnect the client from the legitimate AP (via deauth attacks or RF disruption) A rogue AP (created using access point software) that impersonates the real network DHCP server software to assign IP addresses and act as a gateway, completing the fake network Incorrect:

B). Terminal emulation is not relevant.

C). Workgroup bridges and protocol analyzers are for monitoring, not attacking.

E). MAC spoofing and DoS do not complete a hijack.

CWNP Practical WLAN Attack Tools Guide

NEW QUESTION # 49

You have an AP implemented that functions only using 802.11-2012 standard methods for the WLAN communications on the RF side and implementing multiple SSIDs and profiles on the management side configured as follows:

1. SSID: Guest - VLAN 90 - Security: Open with captive portal authentication - 2 current clients
2. SSID: ABCData - VLAN 10 - Security: PEAPv0/EAP-MSCHAPv2 with AES-CCMP - 5 current clients
3. SSID: ABCVoice - VLAN 60 - Security: WPA2-Personal - 2 current clients Two client STAs are connected to ABCData and can access a media server that requires authentication at the Application Layer and is used to stream multicast video streams to the clients.

What client stations possess the keys that are necessary to decrypt the multicast data packets carrying these videos?

- A. Only the members of the executive team that are part of the multicast group configured on the media server
- B. All clients that are associated to the AP using any SSID
- C. All clients that are associated to the AP with a shared GTK, which includes ABCData and ABCVoice.
- D. All clients that are associated to the AP using the ABCData SSID

Answer: D

Explanation:

The GTK (Group Temporal Key) is used to encrypt multicast/broadcast traffic.

Each SSID has a unique GTK.

Only clients on the same SSID (ABCData) will receive and be able to decrypt multicast traffic encrypted with ABCData's GTK.

Incorrect:

A). Application-layer authentication does not affect GTK distribution.

C). Clients on other SSIDs (e.g., Guest, ABCVoice) have different GTKs and cannot decrypt ABCData's multicast traffic.

D). Each SSID uses a unique GTK; GTKs are not shared across SSIDs.

IEEE 802.11i and CCMP Specifications

NEW QUESTION # 50

Given: XYZ Hospital plans to improve the security and performance of their Voice over Wi-Fi implementation and will be upgrading to 802.11n phones with 802.1X/EAP authentication. XYZ would like to support fast secure roaming for the phones and will require the ability to troubleshoot reassociations that are delayed or dropped during inter-channel roaming.

What portable solution would be recommended for XYZ to troubleshoot roaming problems?

- A. WIPS sensor software installed on a laptop computer
- B. Spectrum analyzer software installed on a laptop computer
- C. Laptop-based protocol analyzer with multiple 802.11n adapters
- D. An autonomous AP mounted on a mobile cart and configured to operate in monitor mode

Answer: C

Explanation:

For troubleshooting fast roaming (e.g. 802.11r) across channels, a portable protocol analyzer with dual- or multi-band 802.11n adapters enables:

Simultaneous packet capture on different channels

Capturing handoff-related frames and timing analysis in roaming scenarios This setup allows detailed capture of reassociation, authentication, and 4-Way Handshake processes, essential for diagnosing roaming delays.

Other options (WIPS, spectrum analyzer, autonomous AP) do not support detailed 802.11 frame capture across multiple channels during roaming events.

NEW QUESTION # 51

You are implementing a wireless LAN that will be used by point-of-sale (PoS) systems in a retail environment. Thirteen PoS computers will be installed. To what industry requirement should you ensure you adhere?

- A. ISA99
- B. HIPAA
- C. Directive 8500.01
- D. PCI-DSS

Answer: D

Explanation:

PCI-DSS (Payment Card Industry Data Security Standard) applies to all entities that process, store, or transmit credit card data. Since Point-of-Sale (PoS) systems handle such transactions in retail environments, the wireless network supporting them must comply with PCI-DSS. This includes encrypting wireless transmissions, segmenting network traffic, and implementing WIPS for rogue detection and logging.
