

Free PDF Quiz 2026 The Best JN0-460: Exam Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Introduction

BONUS!!! Download part of Actual4Cert JN0-460 dumps for free: <https://drive.google.com/open?id=14cx8cHffBiree-JJBDmG9aCg5JTtro>

Choose JN0-460 exam Topics Pdf to prepare for your coming test, and you will get unexpected results. JN0-460 pdf version is very convenient to read and review. If you like to choose the paper file for study, the JN0-460 pdf file will be your best choice. The Juniper JN0-460 PdfDumps can be printed into papers, so that you can read and do marks as you like. Thus when you open your dumps, you will soon find the highlights in the JN0-460 papers. What's more, the 99% pass rate can help you achieve your goals.

To practice for a Mist AI Wired, Specialist (JNCIS-MistAI-Wired) in the software (free test), you should perform a self-assessment. The Juniper JN0-460 practice test software keeps track of each previous attempt and highlights the improvements with each attempt. The Juniper JN0-460 Mock Exam setup can be configured to a particular style & arrive at unique questions.

New JN0-460 Test Sims | Latest JN0-460 Exam Book

Actual4Cert is a trusted platform that is committed to helping Juniper JN0-460 exam candidates in exam preparation. The Juniper JN0-460 exam questions are real and updated and will repeat in the upcoming Juniper JN0-460 Exam Dumps. By practicing again and again you will become an expert to solve all the Juniper JN0-460 exam questions completely and before the exam time.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q29-Q34):

NEW QUESTION # 29

How do MistAI accounts enhance the functionality of Wired Assurance?

- A. By providing AI-driven insights for network optimization.
- B. By increasing the physical durability of network devices.
- C. By offering discounted hardware purchases.
- D. By enabling social media integration.

Answer: A

NEW QUESTION # 30

A company has a Mist campus fabric with a single VRF and must configure group-based policy (GBP) tags to isolate different types of endpoints.

What would be an appropriate solution for this scenario?

- A. Assign GBP tags based on endpoint location.

- B. Assign a separate GBP tag to each endpoint.
- C. Assign a single GBP tag to all endpoints.
- D. Assign GBP tags based on endpoint type.

Answer: D

Explanation:

Juniper Mist AI for Wired uses group-based policy (GBP) to enforce segmentation within a single VRF, without requiring separate VRFs per user group. GBP tags classify endpoints logically (e.g., employees, guests, IoT devices) and enforce security rules across the EVPN-VXLAN fabric.

"Group-Based Policy (GBP) provides scalable segmentation by assigning tags to endpoints based on attributes such as user type, role, or device type. These GBP tags are then used in policies to control communication between groups." Option A is inefficient: assigning unique tags per endpoint is not scalable.

Option C is incorrect: GBP is identity-based segmentation, not location-based.

Option D is incorrect: assigning a single tag defeats the purpose of segmentation.

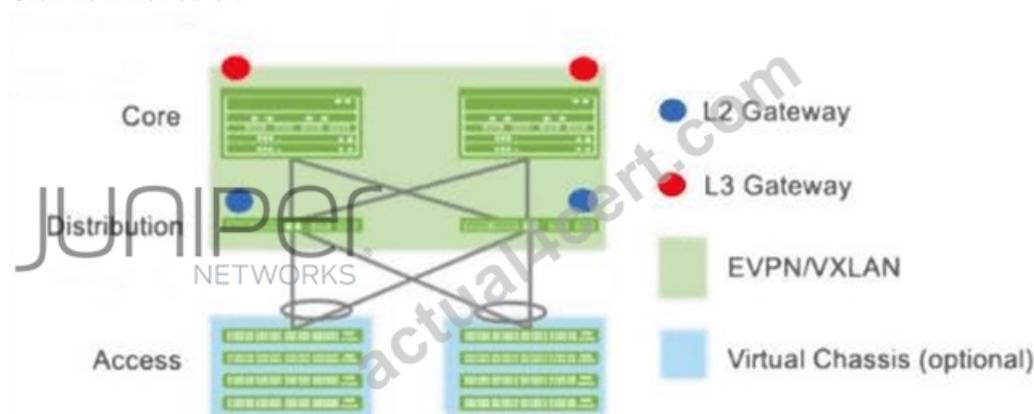

Option B is correct: the best practice is to assign GBP tags based on endpoint type (e.g., servers, staff, IoT, guests), which then drives policy enforcement.

NEW QUESTION # 31

Click the Exhibit button.

Which campus fabric architecture is shown in the exhibit?

- A. 5-stage IP Clos
- B. 3-stage IP Clos
- C. core-distribution - centrally-routed bridging (CRB)
- D. core-distribution - edge-routed bridging (ERB)

Answer: C

Explanation:

The exhibit shows:

L2 gateways (blue dots) positioned at the distribution layer.

L3 gateways (red dots) positioned at the core layer.

EVPN/VXLAN providing fabric connectivity between layers.

Access switches forwarding traffic into the fabric without acting as gateways.

This directly maps to the centrally-routed bridging (CRB) model, where:

Bridging occurs at the access/distribution layer.

Routing (L3 gateway) occurs centrally at the core layer.

"In the core-distribution CRB model, Layer 2 gateways are deployed at the distribution switches, and Layer 3 gateways are deployed centrally at the core switches." Option A (ERB) is incorrect because ERB places the L3 gateway at the edge/access.

Option B (5-stage IP Clos) is incorrect - that topology has a leaf/spine architecture, not core/distribution.

Option C (3-stage IP Clos) is incorrect - that eliminates the distribution layer.

Option D (CRB) is correct, matching the diagram exactly.

NEW QUESTION # 32

In a Campus EVPN-VXLAN deployment, VTEP functions include: (Select two)

- A. Decapsulating VXLAN packets back into Ethernet frames
- B. Direct physical connection to end-user devices
- C. Encrypting all network communications
- D. Encapsulating Ethernet frames into VXLAN packets

Answer: A,D

NEW QUESTION # 33

The main advantage of Campus Fabric IP Clos architecture is:

- A. Enhanced fault tolerance
- B. Increased network complexity
- C. Decreased scalability
- D. Limited data flow control

Answer: A

NEW QUESTION # 34
