問題 #1318
Which of the following is NOT a part of a risk analysis?

- A. Identify risks
- B. Provide an economic balance between the impact of the risk and the cost of the associated countermeasure
- C. Quantify the impact of potential threats
- D. Choose the best countermeasure

答案：D

解題說明：
Explanation/Reference:
Explanation:
Risk assessment is a method of identifying vulnerabilities and threats and assessing the possible impacts to determine where to implement security controls. A risk assessment is carried out, and the results are analyzed. Risk analysis is used to ensure that security is cost-effective, relevant, timely, and responsive to threats. Security can be quite complex, even for well-versed security professionals, and it is easy to apply too much security, not enough security, or the wrong security controls, and to spend too much money in the process without attaining the necessary objectives. Risk analysis helps companies prioritize their risks and shows management the amount of resources that should be applied to protecting against those risks in a sensible manner.
A risk analysis has four main goals:
Identify assets and their value to the organization.
Identify vulnerabilities and threats.
Quantify the probability and business impact of these potential threats.
Provide an economic balance between the impact of the threat and the cost of the countermeasure.
Choosing the best countermeasure is not part of risk analysis. Choosing the best countermeasure would be part of risk mitigation.
Incorrect Answers:
A: Identifying risks is part of risk analysis.

B: Quantifying the impact of potential threats is part of risk analysis.
C: Providing an economic balance between the impact of the risk and the cost of the associated countermeasure is part of risk analysis.

問題 #1319
The following is not true:

- A. Human guard is an inefficient and sometimes ineffective method of protecting resources.
- B. There has never been of problem of lost keys.
- C. The addition of a PIN keypad to the card reader was a solution to unreported card or lost card problem.
- D. Since the early days of mankind humans have struggled with the problems of protecting assets.

答案：B

解題說明：
This is absolutely false, this problem can be seen almost anywhere. There have always been trouble with the lost of keys. Some of those looses are more important than others, its not the same to lost the key of the company safe box, that lost the key of you locker with that contains your shoes.
This is obviously an incorrect statement, answer C is the one in here.
"Unfortunately, using security guards is not a perfect solution. There are numerous disadvantages to deploying, maintaining, and relying upon security guards. Not all environments and facilities support security guards. This may be due actual human incompatibility with the layout, design, location, and construction of the facility. Not all security guards are themselves reliable. Prescreening, bonding, and training does not guarantee that you won't end up with an ineffective and unreliable security guard." Pg 646
