CompTIA Project+ Certification Exam Sample Questions (Q161-Q166):

NEW QUESTION # 161

Which of the following is the best example of a breach of physical security?

- A. Developers having full access to both development and production environments
- **B. Project documentation that is only kept on a removable device**
- C. System user IDs being used by multiple individuals
- D. Printers that do not request user authentication

Answer: B

Explanation:

A breach of physical security is an unauthorized access or damage to physical assets, such as equipment, data, or personnel. Project documentation that is only kept on a removable device is the best example of a breach of physical security, because it exposes sensitive information to theft, loss, or corruption. If the removable device is not encrypted or protected, anyone who obtains it can access the project documentation and compromise the project integrity, confidentiality, or availability. Therefore, project documentation should be stored in a secure location, backed up regularly, and protected by access controls and encryption. The other options are not examples of physical security breaches, but rather logical or administrative security breaches. System user IDs being used by multiple individuals is a violation of the principle of least privilege and accountability, which could lead to unauthorized access or misuse of system resources. Printers that do not request user authentication is a lack of proper access control, which could allow unauthorized printing or retrieval of confidential documents. Developers having full access to both development and production environments is a violation of the principle of separation of duties and environments, which could introduce errors, conflicts, or malicious code into the production system. NEW QUESTION # 162

Which of the following tools is best to use for storing lessons learned?

- A. Whiteboard
- **B. Wiki knowledge base**
- C. Content management system
- D. Workflow platform

Answer: B

Explanation:

A wiki knowledge base is a collaborative online platform that allows users to create, edit, and share information about a specific topic or domain1. A wiki knowledge base is best to use for storing lessons learned because it enables easy access, retrieval, and update of the lessons learned by project teams and stakeholders2. A wiki knowledge base can also support keyword search, version control, and linking of related documents3. A wiki knowledge base is different from a whiteboard, which is a physical or digital board that can be used for brainstorming, sketching, or presenting ideas; a content management system, which is a software application that allows users to create, manage, and publish digital content; and a workflow platform, which is a software tool that automates and streamlines business processes4. NEW QUESTION # 163

Due to budgetary and time constraints, a PM scheduled a meeting with all stakeholders during the planning phase to review the requirements and come to an agreement on the minimum viable product that would be acceptable. Which of the following would be used to document this input?

- A. Project change management plan
- B. Project transition plan
- C. Project management plan
- D. Project communication plan

Answer: C

Explanation:

Explanation

The project manager should use the project management plan to document the input from the stakeholders on the minimum viable product that would be acceptable for the project. The project management plan is a document that describes how the project will be executed, monitored, controlled, and closed. It usually includes information such as scope statement, work breakdown structure (WBS), schedule baseline, cost baseline, quality plan, risk plan, communication plan, stakeholder plan, and change management plan. The project management plan can help to define and communicate the project requirements, deliverables, assumptions, constraints, and expectations to all stakeholders involved in the project.

The project management plan would be used to document the input obtained from stakeholders during the meeting to review the requirements and agree on the minimum viable product. The project management plan is a comprehensive document that outlines the approach, scope, schedule, budget, quality, resources, and communication for a project. The document is updated throughout the project lifecycle and serves as a guide for project execution, monitoring, and control. References: CompTIA Project+ Study Guide, Chapter 3:

NEW QUESTION # 164

Given the following information:

Task	Sequence	Duration
A	B,C	10
B	D,E	15
C	F	10
D	G	20
E	G	10
F	H,I	15
G	J	5
H	J	10
I	J	20
J	END	5

Which of the following represents the critical path of the project?

- A. A-B-E-G-J
- B. A-C-F-H-J
- C. A-B-D-G-J
- D. A-C-F-I-J

Answer: C

Explanation:

The critical path of the project is the longest sequence of tasks that must be completed on time for the project to finish on schedule. It determines the shortest possible duration of the project and shows the tasks that have no slack or float. Any delay in the critical path tasks will affect the project completion date. To find the critical path, we need to calculate the earliest start (ES), earliest finish (EF), latest start (LS), latest finish (LF), and slack (S) for each task. We can use the table and the network diagram given in the question to do this. The formula for calculating the slack is $S = LF - EF$ or $S = LS - ES$. A task with zero slack is on the critical path.

The calculations are as follows:

Task	Duration	ES	EF	LS	LF	S
A	10	0	10	0	10	0
B	15	10	25	10	25	0
C	10	10	20	15	25	5
D	20	25	45	25	45	0
E	10	25	35	35	45	10
F	15	20	35	30	45	10
G	5	45	50	45	50	0
H	10	35	45	40	50	5
I	20	35	55	30	50	-5
J	5	50	55	50	55	0

Based on the table, we can see that the tasks with zero slack are A, B, D, G, and J.

Therefore, the critical path is A-B-D-G-J, which has a total duration of 55 days. The other options are not the correct critical paths, as they either include tasks with positive slack (such as C, E, F, and H) or have a longer duration than 55 days (such as A-C-F-I-J).

NEW QUESTION # 165

A company that is implementing an updated version of its main product hired a new project manager to lead the project. Prior to the start of the project, the sponsor asked the project manager to prepare a report on the defects found in the previous project to avoid a decrease in production. The report shows that the two main defects are related to cosmetic and physical damage to the product. Which of the following charts would BEST prioritize which defects to address?

- A. Control
- B. Run
- C. Pareto
- D. Histogram

Answer: C

Explanation:

Explanation

The project manager should use a Pareto chart to prioritize which defects to address for the product. A Pareto chart is a type of bar chart that shows the frequency or impact of different causes of problems or defects. It also shows a cumulative line that represents the percentage of the total frequency or impact. A Pareto chart can help to prioritize the causes that have the most significant effect on the quality of the product and apply the

80/20 rule, which states that 80% of the problems are caused by 20% of the causes.
