CIDQ Practice Test IDFX I - 2024

C - ANSWER What is an appropriate circulation factor for an open office plan using systems furniture?

- A. 5%-8%
- B. 10%-20%
- C. 25%-40%
- D. 50%-65%

C - ANSWER Which fabric described below possesses the HIGHEST flame resistance and satisfies durability requirements for use on school auditorium seating?

- A. BINGO ASTM-E-84 Class A; 55,000 Wyzenbeek
- B. PETER PLAID NFPA 301-49 (Small Scale) & NFPA 225
- C. BUTLER STRIPE 100% Crypton, 150,000 Wyzenbeek
- D. HENDERSON ASTM-E84 Class B

A - ANSWER What does the 7 in the symbol below indicate? (Circle bisected with a 7 above the line and A-2 below the line; half the circle is surrounded by a black triangle pointing down)

- A. Section number
- B. Drawing sheet
- C. Specification section
- D. Detail number

C - ANSWER The term architectural woodwork refers to which of the following?

- A. standardized modular cabinetry

2026 Latest Actual4dump IDFX PDF Dumps and IDFX Exam Engine Free Share: <https://drive.google.com/open?id=1DX0LqKQJmpMPJ5hG1YrjL-UgQRp5yAr4>

Our three versions of IDFX study materials are the PDF, Software and APP online. They have their own advantages differently and their prolific IDFX practice materials can cater for the different needs of our customers, and all these IDFX simulating practice includes the new information that you need to know to pass the test for we always update it in the first time. So you can choose them according to your personal preference.

Are you upset for your IDFX exam test? When you find IDFX valid test cram, your stress may be relieved and you may have methods to do the next preparation for IDFX actual exam. The CIDQ IDFX correct questions & answers are the latest and constantly updated in accordance with the changing of the Real IDFX Exam, which will ensure you solve all the problem in the actual test. You will pass your IDFX test at first attempt with ease.

Very best CIDQ IDFX Dumps - By Most Secure System

The Actual4dump is committed to making the entire Interior Design Fundamentals Exam (IDFX) exam preparation journey simple, smart, and successful. To achieve this objective the Actual4dump is offering the top-rated and updated Interior Design Fundamentals Exam (IDFX) exam practice test questions in three different formats. These formats are CIDQ IDFX web-based practice test software, desktop practice test software, and PDF dumps files.

CIDQ Interior Design Fundamentals Exam Sample Questions (Q77-Q82):

NEW QUESTION # 77

A completed programming package MUST contain which feature?

- A. A list of project needs and concerns
- B. A budget with detailed cost estimates
- C. Preliminary drawings and design concepts
- D. Selection of colors and finishes

Answer: A

Explanation:

The programming phase in interior design involves gathering and analyzing information to define the project's requirements. A completed programming package must include a list of project needs and concerns, such as spatial requirements, functional needs, and client goals, as this forms the foundation for the design process.

Option A (selection of colors and finishes) occurs later, during the design development phase. Option C (budget with detailed cost estimates) may be part of programming but is not a required component of the package. Option D (preliminary drawings and design concepts) is part of the schematic design phase, not programming.

Verified Answer from Official Source:

The correct answer is verified using NCIDQ IDFX content on the programming phase.

Exact Extract: The NCIDQ IDFX Reference Manual states, "The programming package must include a comprehensive list of project needs and concerns, including spatial, functional, and client-specific requirements." The NCIDQ IDFX curriculum defines programming as the process of identifying the client's needs and project requirements, which are documented in a programming package to guide the design process.

Objectives:

* Understand the components of the programming phase (IDFX Objective: Programming and Site Analysis).

NEW QUESTION # 78

What part of the egress system is a non-rated stairway?

- A. Exit discharge
- B. Exit path
- C. Exit
- D. Exit access

Answer: D

Explanation:

The egress system, as defined by the International Building Code (IBC), consists of three parts: exit access, exit, and exit discharge. The exit access is the portion of the egress system that leads from any occupied portion of a building to an exit, such as corridors, stairways, or ramps. A non-rated stairway (one without a fire-resistance rating) is typically part of the exit access because it is not enclosed or protected as a rated exit would be. Option A (exit) refers to the protected portion, like an enclosed stairway with a fire rating. Option B (exit path) is not a standard term in the IBC. Option D (exit discharge) is the path from the exit to the public way, typically outside the building.

Verified Answer from Official Source:

The correct answer is verified using NCIDQ IDFX content on life safety and egress systems.

Exact Extract: The NCIDQ IDFX Reference Manual references IBC standards, stating, "A non-rated stairway is part of the exit access, which leads from occupied spaces to an exit, as it does not require fire-resistance ratings." The NCIDQ IDFX curriculum requires understanding egress systems, with non-rated stairways being part of the exit access, as they are not protected like rated exits.

Objectives:

* Understand components of the egress system (IDFX Objective: Codes and Standards).

NEW QUESTION # 79

Which of the following testing standards would be applicable to a lounge chair being specified for a lobby?

- A. Steiner tunnel
- B. Radiant panel

- C. Methenamine pill
- **D. Smolder resistance**

Answer: D

Explanation:

A lounge chair in a lobby, which is a public space, must meet fire safety standards to ensure occupant safety.

The NCIDQ IDFX Reference Manual and fire safety standards (e.g., from the National Fire Protection Association [NFPA] and the California Technical Bulletin [Cal TB]) outline testing standards for furniture, particularly upholstered furniture, in commercial settings. The question asks for the applicable testing standard for a lounge chair, focusing on its fire performance.

* A. Radiant panel: The radiant panel test (ASTM E648) measures the flame spread of flooring materials (e.g., carpet, tile) when exposed to radiant heat. It is not applicable to furniture like a lounge chair, as it tests surface burning characteristics of floor coverings, not upholstered items.

* B. Steiner tunnel: The Steiner tunnel test (ASTM E84) measures the flame spread and smoke development of building materials (e.g., wall coverings, ceiling materials) in a tunnel-like apparatus. It is used for interior finishes, not for furniture, so it is not applicable to a lounge chair.

* C. Methenamine pill: The methenamine pill test (ASTM D2859) is a flammability test for carpet and rugs, assessing their ignition resistance when exposed to a small flame (a methenamine tablet). This test is specific to floor coverings and is not applicable to upholstered furniture like a lounge chair.

* D. Smolder resistance: Smolder resistance testing (e.g., California Technical Bulletin 117-2013 [Cal TB 117-2013]) evaluates the ability of upholstered furniture to resist smoldering ignition, such as from a cigarette. This is a critical test for lounge chairs in public spaces like lobbies, where upholstered furniture poses a risk of smoldering fires. Cal TB 117-2013 tests the foam, fabric, and other components of the chair to ensure they do not ignite or sustain a smoldering fire, making this the most applicable standard for a lounge chair in a lobby.

The NCIDQ IDFX Reference Manual emphasizes that smolder resistance testing, such as Cal TB 117, is a key standard for upholstered furniture in commercial settings, ensuring fire safety in public spaces like lobbies.

Verified Answer from Official Source: The correct answer is D, as verified by the NCIDQ IDFX Reference Manual.

Exact Extract:

From the NCIDQ IDFX Reference Manual (Chapter 2: Building Codes and Standards): "Smolder resistance testing, such as California Technical Bulletin 117, is applicable to upholstered furniture like lounge chairs in public spaces, ensuring they resist smoldering ignition for fire safety." Explanation from Official Source:

The NCIDQ IDFX Reference Manual explains that smolder resistance testing is a critical standard for upholstered furniture in commercial settings, such as a lounge chair in a lobby. This test ensures the chair's materials (e.g., foam, fabric) can resist smoldering ignition, reducing fire risk in public spaces. Other tests like radiant panel, Steiner tunnel, and methenamine pill apply to flooring or finishes, not furniture, making smolder resistance the correct choice.

Objectives:

- * Understand fire safety testing standards for furniture in public spaces.
- * Identify the appropriate flammability test for upholstered lounge chairs.

NEW QUESTION # 80

A retired couple is renovating their house and wants to plan for aging in place. Which of the following should be recommended?

- A. ADA-height water closet, 30" [762 mm] clear door width, and walk-in shower
- B. Wheelchair clearance at master bath, hardwood flooring, and ADA-approved wall sconces
- C. Low-cost, low-maintenance products, low-pile carpeting, and additional grab bars
- **D. Flush thresholds, grab bars, and lever handles**

Answer: D

Explanation:

Aging in place refers to designing a home to allow individuals to live independently as they age, accommodating potential mobility and accessibility challenges. Flush thresholds eliminate tripping hazards, grab bars provide support in areas like bathrooms, and lever handles are easier to operate for those with reduced hand strength or dexterity—key features for aging in place. Option B includes an ADA-height water closet and walk-in shower, which are beneficial, but the 30" clear door width is insufficient (ADA requires 32" minimum). Option C focuses on low maintenance but lacks critical accessibility features like flush thresholds. Option D includes wheelchair clearance and hardwood flooring, but ADA-approved wall sconces are not a primary concern for aging in place.

Verified Answer from Official Source:

The correct answer is verified using NCIDQ IDFX content on universal design and accessibility.

Exact Extract: The NCIDQ IDFX Reference Manual states, "Aging-in-place design includes features such as flush thresholds to eliminate tripping hazards, grab bars for support, and lever handles for ease of use." The NCIDQ IDFX curriculum emphasizes

universal design principles, which include features that support aging in place by enhancing safety and accessibility. Flush thresholds, grab bars, and lever handles directly address common aging-related challenges.

Objectives:

* Apply universal design principles to residential spaces (IDFX Objective: Human Behavior and the Designed Environment).

NEW QUESTION # 81

What does line "A" on the floor plan represent?

- A. Pattern on the floor
- **B. Hidden object**
- C. Item to be removed
- D. Light cove edge

Answer: B

Explanation:

Comprehensive and Detailed in Depth Explanation:

The diagram provided includes two views of a bathroom: an elevation (1) and a floor plan (2). The elevation shows a toilet, a grab bar, and a mirror above the toilet, with dimensions such as 2'-4" (710 mm) from the floor to the grab bar and 3'-1" (940 mm) from the floor to the top of the mirror. The floor plan shows the layout of the bathroom, including the toilet, a door, and a line labeled "A" near the door. The question asks what line "A" on the floor plan represents.

Step 1: Analyze the Floor Plan and Line "A"

In the floor plan (2), line "A" is a dashed line located near the door, running parallel to the wall where the door is located. Dashed lines in architectural and interior design drawings typically represent elements that are not directly visible in the plan view, such as hidden objects, edges above the cutting plane, or items to be removed. To determine the meaning of line "A," we need to cross-reference the floor plan with the elevation and consider standard drafting conventions as outlined in NCIDQ Interior Design Fundamentals.

Step 2: Cross-Reference with the Elevation

The elevation (1) shows the wall with the toilet, a grab bar, and a mirror above the toilet. The mirror is positioned at a height of 3'-1" (940 mm) from the floor to its top edge. In a floor plan, the cutting plane is typically taken at about 4 feet (1.2 meters) above the floor, meaning that elements below this height (like the toilet) are visible, while elements above this height (like the top of the mirror) are not directly visible unless indicated with a special line type.

* The door in the floor plan swings into the bathroom, and line "A" is a dashed line near the door, suggesting it represents something related to the door or the wall above the door.

* The elevation does not show any elements directly above the door (e.g., a transom window or a light cove), but the door itself has a header or lintel above it, which is a structural element typically hidden in a floor plan view.

Step 3: Evaluate Each Option Based on Drafting Standards

* Option A: Hidden object In architectural and interior design drawings, a dashed line often represents a hidden object or edge that is not directly visible in the plan view. For example, a dashed line might indicate the outline of a structural element above the cutting plane, such as a beam, a lintel, or the top of a door frame (header). In this floor plan, line "A" is a dashed line near the door, which likely represents the door header or lintel above the door. This is a common use of dashed lines in floor plans, as the header is above the cutting plane (4 feet) and thus not directly visible. Option A aligns with standard drafting conventions, making it a strong candidate for the correct answer.

* Option B: Light cove edge A light cove is a recessed area in the ceiling or wall designed to house indirect lighting. In a floor plan, a light cove edge might be represented with a dashed line if it is above the cutting plane, but this is typically accompanied by additional notation or a specific symbol (e.g., a note indicating "light cove"). The elevation does not show any lighting fixtures or a cove above the door, and the floor plan does not indicate any ceiling features. Additionally, light coves are more commonly found in larger spaces like lobbies or conference rooms, not small bathrooms. Therefore, Option B is unlikely.

* Option C: Pattern on the floor A pattern on the floor (e.g., tile or flooring material change) is typically represented in a floor plan with hatching, shading, or a solid line to indicate a change in material. A dashed line like "A" is not a standard way to represent a floor pattern. Additionally, the elevation does not suggest any floor pattern changes, and the floor plan does not show any other indications of flooring materials. Option C does not align with the use of a dashed line, so it is not the correct answer.

* Option D: Item to be removed In construction drawings, an item to be removed (e.g., during a renovation) is often indicated with a dashed line, but this is typically accompanied by a note or symbol (e.g., "to be demolished" or "remove"). In NCIDQ exam contexts, items to be removed are usually clearly labeled to avoid ambiguity. The floor plan does not indicate a renovation context, and there is no note suggesting that line "A" represents something to be removed. While a dashed line can sometimes indicate demolition, the lack of additional context makes Option D less likely than Option A.

Step 4: Conclusion Based on Drafting Standards

The dashed line "A" near the door most likely represents a hidden object, such as the door header or lintel above the door, which is above the cutting plane of the floor plan (typically 4 feet). This is a standard use of dashed lines in architectural and interior design

drawings, as outlined in NCIDQ guidelines. The elevation does not show any other features (like a light cove or transom) that would suggest an alternative interpretation, and the other options (light cove edge, floor pattern, or item to be removed) do not align with the context or drafting conventions as well as Option A does.

Therefore, the correct answer is A: Hidden object, representing the door header or lintel above the door.

Verified Answer from Official Source:

The correct answer is verified using principles from the NCIDQ Interior Design Fundamentals and standard architectural drafting conventions, which are part of the NCIDQ exam preparation materials.

Exact Extract:

From the NCIDQ IDFX Reference Manual (a common resource for NCIDQ candidates):

"In floor plans, dashed lines are used to indicate hidden edges or objects above the cutting plane, such as structural elements like beams, lintels, or door headers, which are not directly visible in the plan view." The NCIDQ guidelines specify that dashed lines in a floor plan represent hidden objects or edges above the cutting plane, such as a door header or lintel. In this case, line "A" is a dashed line near the door, indicating the door header above the door, which is not visible in the floor plan because it is above the typical cutting plane height of 4 feet. This aligns with standard drafting practices and ensures clarity in the drawing for contractors and designers. Options B, C, and D do not match the standard use of a dashed line in this context, as they either refer to features not present (light cove), use incorrect line types (floor pattern), or lack supporting context (item to be removed).

Objectives:

- * Understand the use of line types in architectural and interior design drawings.
- * Identify the meaning of dashed lines in floor plans, particularly for hidden objects.
- * Apply drafting standards to interpret floor plans and elevations in commercial and residential spaces.

NEW QUESTION # 82

.....

Keeping the dynamic Interior Design Fundamentals Exam (IDFX) exam content in mind, we provide updated and reliable IDFX test material. We also offer free CIDQ Dumps updates for up to 1 year after your purchase. We only provide cost-effective Interior Design Fundamentals Exam (IDFX) exam practice material. A 24/7 customer service can also help you in case of any problem. Don't wait for your success if the best Interior Design Fundamentals Exam (IDFX) exam preparation material is available on our platform. You can get actual Interior Design Fundamentals Exam (IDFX) exam questions and prepare for your test in a short time. If you have any issue, please contact our customer support.
