Drupal-Site-Builder Reliable Exam Book - New Drupal-Site-Builder Exam Simulator

Maybe you have desired the Drupal-Site-Builder certification for a long time but don't have time or good methods to study. Maybe you always thought study was too boring for you. Our Drupal-Site-Builder study materials will change your mind. With our products, you will soon feel the happiness of study. Thanks to our diligent experts, wonderful study tools are invented for you to pass the Drupal-Site-Builder Exam. You can try the demos first and find that you just can't stop studying if you use our Drupal-Site-Builder training guide.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q49-Q54):

NEW QUESTION # 49

The UX team has suggested that "Social share" buttons currently visible in the sidebar region should be moved to the footer. The Social share buttons are implemented in a custom block. How should you make the requested changes?

- A. From the block layout admin page, drag the existing block from the Sidebar region to the Footer region.
- B. From the "Appearance" admin page, reconfigure the site's theme to place the block in the Footer region instead of the Sidebar.
- C. Using the "Basic page" content type's "Manage display" interface, drag the existing block from the Sidebar region to the Footer region.
- D. For each content type, use the Layout Builder module's "manage layout" feature to reassign the block from the Sidebar region to the Footer region.

Answer: A

Explanation:

In Drupal 10 and Drupal 11, blocks are placed and managed through the Block Layout system available at Structure # Block layout . Each theme defines regions such as Sidebar, Footer, Header, etc., and administrators can assign blocks to these regions. Since the "Social share" buttons are implemented as a custom block , the correct approach is to reposition the block using the Block Layout admin interface . This interface allows site builders to move blocks between regions either by dragging or by editing the block's region setting. This matches Drupal's documented site- building practice for managing block placement. Option A is incorrect because Manage display is used for configuring how fields are displayed on entities, not for block placement. Option C is incorrect because the Appearance page controls themes, not individual block placement. Option D is unnecessary because Layout Builder is used for per-content or per-entity layouts, not for globally placed blocks like a social share block. Therefore, the simplest and correct solution is to move the block via the Block Layout page, making option B correct.

NEW QUESTION # 50

You have a Corporate site where all traffic is anonymous. On the site, you have been getting thousands of user registrations every day. You notice that most of the registrations are spam. What will you do to prevent this?

- A. Set "Who can register accounts" to "Visitors," and check "Enable password strength indicator."
- B. Set "Who can register accounts" to "Administrators only," and assign the task of new account creation to site admins.
- C. Set the personal contact form for new users to disabled, and set email verification to use the personal contact form method.
- D. Add user/password in your .htaccess, so that only people who know the credentials can access your site and create an account.

Answer: B

Explanation:

For a corporate site where public visitors do not need self-service accounts, the correct Drupal site-building solution is to disable visitor registration. Drupal's official User Guide for Configuring User Account Settings says to go to Configuration > People > Account settings and, under Registration and cancellation , select "Administrators only" as the people with permission to register user accounts. This turns off public account creation and is the standard Drupal method for stopping spam registrations on sites that do not need open sign- up. The other choices do not match Drupal's documented account-management approach. Option B still allows visitors to create accounts, so it does not prevent spam registrations; a password strength indicator is unrelated to blocking bot sign-ups. Option A would protect the entire site at the web-server level, which is not the intended Drupal account-registration setting and would block all anonymous access, contradicting the site's normal public use. Option D refers to unrelated contact-form behavior and does not control account creation. Drupal's account settings documentation specifically identifies "Administrators only" as the way to stop visitor registration, making C the verified answer.

NEW QUESTION # 51

Your website has a content type named "Cars for sale" with a Taxonomy reference field for "Manufacturer" vocabulary. You have a view listing all the cars for sale. You wish to display different background colors to the cars rows based on the value of the Manufacturer field. How can you add a CSS class to each row of the view based on the value of the Manufacturer field?

- A. Add an attachment to the view that use field token for the Manufacturer field as CSS class values to all rows
- B. Add a new custom field to the view named CSS class and add a field token for Manufacturer field as values.
- C. Add the field token for the Manufacturer field under group-by options of the display.
- **D. Add the field token for Manufacturer field as a Row class in the Format > Settings of the display.**

Answer: D

Explanation:

In Drupal 10 and Drupal 11 Views, the correct place to add a CSS class to each rendered row is the Format # Settings # Row class option. Drupal core's Views API shows that style plugins can provide a Row class text field, and when the display uses fields, this option explicitly supports field tokens . The documentation in core states: "You may use field tokens ... for all fields." That means you can add the Manufacturer field to the View and use its token in the Row class setting so each row gets a class derived from that field's value.

Drupal then token-replaces the value for each row and sanitizes it into a valid CSS identifier.

The other options do not match how Drupal Views handles per-row CSS classes. Attachments do not assign row classes to the main display, a separate custom field is not required for this built-in capability, and group- by options are for grouping results rather than applying row-level CSS classes. So the Drupal-native, documented method is to put the Manufacturer field token directly into the Row class setting in the display's Format settings .

NEW QUESTION # 52

You are building a conference website. All attendees are required to submit an RSVP form. The submissions of the form should be emailed to the attendee and site administrator.

How will you build this functionality?

- A. Download and enable the RSVP module.
- B. Create a content type called RSVP with the required fields. Give the permission to create RSVP content to the attendee role.
- C. Enable site-wide contact form, rename it to RSVP and configure email functionality in the form.
- **D. Create a new contact form type called RSVP and configure email functionality in the form.**

Answer: D

Explanation:

Drupal 10 and Drupal 11 include the Contact module in core, which allows administrators to create multiple contact form types . Each contact form can have its own configuration, including recipients and email notifications . According to Drupal documentation, you can create custom contact forms (e.g., RSVP) and configure them to send emails to specified recipients when a user submits the form

Option A is correct because creating a dedicated RSVP contact form allows you to configure email notifications to both the attendee (via auto-reply) and the site administrator. This approach uses Drupal core functionality and is the recommended way to handle simple form submissions with email notifications.

Option B is incorrect because content types are used for structured content, not form submissions with email handling. Option C is not ideal because the site-wide contact form is meant for general communication and does not provide flexibility for RSVP-specific workflows. Option D is unnecessary since Drupal core already provides the required functionality.

Thus, the best and documented solution is to create a custom contact form and configure its email settings, making A correct.

NEW QUESTION # 53

You have created a new View on the development environment.

How will you export the View to the production environment?

- A. Use backup and migrate module to export the view
- B. Select synchronize configurations option on production environment
- **C. Make the required changes to the development site. Partial export using single export option and import on the live site**
- D. This requires development effort and cannot be done by Drupal admin interface

Answer: C

Explanation:

In Drupal 10 and Drupal 11, a View is stored as configuration , and Drupal provides a built-in Configuration Management system to move configuration between environments. According to the official Drupal User Guide, when you want to move a single

configuration item (such as a View), the recommended approach is to use the Single Export and Single Import functionality available in the admin interface.

On the development site, you navigate to Configuration # Development # Configuration synchronization # Export # Single item, select View, and copy the YAML configuration. Then, on the production site, you go to Import # Single item and paste the configuration to import it.

Option A refers to full configuration synchronization, which is typically used for complete site configuration deployment, not for a single View. Option B is incorrect because Backup and Migrate is meant for database backups, not configuration transfer. Option C is incorrect because Drupal provides a UI-based method for this task.

Thus, the correct and documented approach is partial export/import using the single configuration option, making D the correct answer.

NEW QUESTION # 54

.....

In the Desktop Drupal-Site-Builder practice exam software version of Acquia Drupal-Site-Builder practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the Drupal-Site-Builder Practice Exam which is totally free. Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) practice test is very customizable and you can adjust its time and number of questions.

Drupal-Site-Builder Reliable Exam Book: <https://www.validbrindumps.com/Drupal-Site-Builder-exam-prep.html>

Acquia Drupal-Site-Builder New Dumps Ebook Could you give me a discount, And if you buy the electronic version of the materials, it is difficult to draw marks on them, but Drupal-Site-Builder exam questions provide you with a PDF version, so that you can print out the information, not only conducive to your mark, but also conducive to your memory of important knowledge, I have confidence in our ValidBrindumps products that soon ValidBrindumps's exam questions and answers about Acquia Drupal-Site-Builder will be your choice and you will pass Acquia certification Drupal-Site-Builder exam successfully.

The customer trades off the ability to customize the solution Reliable Drupal-Site-Builder Exam Syllabus for a cheaper and better service, A Table: The Primary Storage for Data, Could you give me a discount?

And if you buy the electronic version of the materials, it is difficult to draw marks on them, but Drupal-Site-Builder Exam Questions provide you with a PDF version, so that you can print out the information, Drupal-Site-Builder New Dumps Ebook not only conducive to your mark, but also conducive to your memory of important knowledge.

Free Download Drupal-Site-Builder New Dumps Ebook & The Best Helper to help you pass Drupal-Site-Builder: Acquia Certified Drupal Site Builder Exam for Drupal 10, 11

I have confidence in our ValidBrindumps products that soon ValidBrindumps's exam questions and answers about Acquia Drupal-Site-Builder will be your choice and you will pass Acquia certification Drupal-Site-Builder exam successfully.

Each product offered by ValidBrindumps has a free Drupal 10/11 demo for the prospective Drupal-Site-Builder clients, Exam: Best Certified professionals are sited beside your exam seat to provide you best and encourage yourself to achieve more.
