

Oracle 1z0-1073-25 Questions - Latest Preparation Material [2026]

2026 Latest PassLeader 1z0-1073-25 PDF Dumps and 1z0-1073-25 Exam Engine Free Share: https://drive.google.com/open?id=1t8jbGWV_xWld7iZ1VO2Ij8LGX7s4tQ8G

PassLeader can provide you a pertinence training and high quality exercises, which is your best preparation for your first time to attend Oracle certification 1z0-1073-25 exam. PassLeader's exercises are very similar with the real exam, which can ensure you a successful passing the Oracle Certification 1z0-1073-25 Exam. If you fail the exam, we will give you a full refund.

Oracle 1z0-1073-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Understanding External Integration: This portion evaluates how System Integration Specialists understand and support integrations between Inventory Management and other Oracle or third-party systems. It includes familiarity with key integration points necessary for streamlined operations and system data consistency.
Topic 2	<ul style="list-style-type: none">Implementing Advanced Inventory Transactions: This part of the exam assesses the skills of Supply Chain Analysts in handling complex inventory flows. It explores advanced scenarios like consignment processes, supply chain orchestration, and back-to-back orders. Candidates must also demonstrate configuration of barcode scanning, product recalls, and support for electronic signatures in compliance environments.
Topic 3	<ul style="list-style-type: none">Implementing Inventory Management: This section of the exam evaluates the skills of Oracle Inventory Specialists in configuring core inventory functions. It focuses on the cost-related features of inventory, including Receipt Accounting and Cost Accounting. Candidates are expected to demonstrate their ability to set up subinventories, units of measure, items, and facility schedules as part of the inventory management configuration process.

Topic 4	<ul style="list-style-type: none"> Implementing Inventory Transactions: This domain measures the ability of Inventory Application Developers to manage and execute inventory transactions. It covers the understanding of inventory balances, item availability, and reservation functionalities. Candidates must show proficiency in configuring transaction controls, handling serial and lot control, and managing common transaction types like subinventory transfers and interorganization transfers.
Topic 5	<ul style="list-style-type: none"> Implementing Inventory Replenishment: This section tests the ability of Inventory Replenishment Planners to configure and execute automated replenishment strategies. Candidates should understand how to define PAR locations and apply Min-Max planning. It assesses hands-on knowledge in running replenishment plans that maintain inventory levels across different storage locations.
Topic 6	<ul style="list-style-type: none"> Using AI ML Mobile and Other Automation Features: This section of the exam assesses the awareness of Cloud Application Consultants in using AI, machine learning, and automation tools. Candidates should understand the practical value these technologies bring to predictive analytics, mobile usage, and overall operational efficiency within Inventory Management.

Test 1z0-1073-25 Valid, Exam 1z0-1073-25 Topic

1z0-1073-25 exam material before purchase; this will help you to figure out what the actual product will offer you and whether these features will help a prospective user to learn within a week. Also, upon purchase, the candidate will be entitled to 1 year free updates, which will help candidates to stay up-to-date with 1z0-1073-25 news feeds and don't leave any chance which can cause their failure. The 100% refund policy is offered to all esteemed users, in the case for any reason, any candidates fail in 1z0-1073-25 certification exam so he may claim the refund.

Oracle Inventory Cloud 2025 Implementation Professional Sample Questions (Q10-Q15):

NEW QUESTION # 10

What can min-max planning policy profiles be assigned to?

- A. Item classification
- B. Item subinventory
- C. Item class

Answer: A

NEW QUESTION # 11

Your supplier is unable to deliver goods on the promise date against a back-to-back order and updates the promise date on the purchase order schedule to a later date.

How is the change handled on the source side?

- A. Order automatically goes on hold in supply orchestration, and the schedule ship date is adjusted in order management.
- B. Date Pushed Out exception is generated in supply orchestration, and order management is notified.
- C. Status quo is maintained on the supply order and sales order.

Answer: B

NEW QUESTION # 12

What happens when Transfer Order Required is not enabled in the Manage Interorganization Parameters page for Direct Organization Transfer?

- A. Transfer orders cannot be created only from inventory.
- B. Transfer orders cannot be created.
- C. Both interorganization transfers and transfer orders can be created. (*)
- D. Transfer orders can be created, but approval is mandatory.

Answer: C

NEW QUESTION # 13

SIMULATION

How Back-to-Back Fulfillment Works

The back-to-back process flow is one in which specific sales order demand triggers supply creation and a link is established between the sales order and the supply.

An organization procures goods from an internal or external supplier or source to a specific warehouse from where you can combine those goods with others to create a single shipment to the customer.

Back-to-back supply processes are similar to regular supply processes that deliver supply to a warehouse except for one difference; the back-to-back supply is always reserved to an order management fulfillment line.

At a high level, you can think of back-to-back fulfillment as a three-step process:

1. Creation of a customer sales order (source of demand).
2. Creation and fulfillment of supply document (source of supply) to the fulfillment warehouse.
3. Shipment of sales order from the fulfillment warehouse to the customer.

However, the back-to-back flow is truly a highly integrated process flow involving several Oracle Fusion Cloud applications. The following figure shows the back-to-back process flow in detail. An explanation for each number follows the figure.

□

Explanation:

Back-to-Back Fulfillment: Detailed Simulation in Oracle Cloud

Introduction

Back-to-back (B2B) fulfillment is a process where supply is created only after a sales order is placed. The supply is specifically reserved for that order and remains linked until fulfillment is completed. Unlike regular inventory processes, back-to-back fulfillment ensures that supply is directly tied to a customer demand, optimizing inventory management while maintaining customer satisfaction.

Key Oracle Fusion Cloud Applications Involved

Back-to-back fulfillment integrates multiple Oracle Fusion Cloud applications, including:

- Oracle Order Management (for sales order processing)
- Oracle Procurement (for external supply sourcing)
- Oracle Manufacturing (for in-house production)
- Oracle Inventory Management (for warehouse operations and fulfillment)
- Oracle Supply Chain Orchestration (for coordinating supply processes)
- Oracle Shipping Execution (for shipping to customers)

Step-by-Step Back-to-Back Fulfillment Simulation

Step 1: Creation of a Customer Sales Order (Source of Demand)

A customer places an order for a product that is not available in stock.

The sales order is created in Oracle Order Management.

The system checks inventory availability in Oracle Inventory Cloud.

Since stock is unavailable, the Supply Chain Orchestration (SCO) module triggers a supply request.

The system determines the best supply source based on sourcing rules (Buy, Make, Transfer, or On-Hand Reservation).

The sales order line is marked for back-to-back fulfillment, and a supply order is generated.

□ System Action: The system reserves the sales order and waits for supply to be created.

Step 2: Creation and Fulfillment of Supply (Source of Supply to Warehouse) Once the supply order is created, the system initiates one of the following supply methods:

Option 1: Buy (Procurement from Supplier)

The system generates a Purchase Requisition in Oracle Procurement Cloud.

The requisition is converted into a Purchase Order (PO) and sent to an external supplier.

The supplier fulfills the order and ships the goods to the fulfillment warehouse.

The warehouse receives the items using Oracle Receiving.

Option 2: Make (Manufacturing in-house or contract manufacturing)

The system generates a Work Order in Oracle Manufacturing Cloud.

The work order is scheduled, and production starts.

Once manufacturing is complete, the finished goods are moved to inventory.

Option 3: Transfer (Move from another warehouse or distribution center) The system creates a Transfer Order in Oracle Inventory Cloud.

Stock is transferred from a different warehouse or location.

Once received, inventory is updated in the fulfillment warehouse.

Option 4: On-Hand (Reserve Existing Inventory)

If stock is available in the fulfillment warehouse, the system directly reserves the items.

No additional supply request is needed.

☐ System Action: The system updates the sales order and marks it ready for fulfillment once supply is received.

Step 3: Shipment of Sales Order to the Customer

The order is released for picking in Oracle Inventory Cloud.

The picking process begins, and items are packed for shipping.

The shipping team processes the order using Oracle Shipping Execution.

A shipment confirmation is generated, and the order is shipped to the customer.

An invoice is created in Oracle Receivables.

The system marks the sales order as fulfilled and closed.

☐ Final Action: The customer receives the order, and the back-to-back fulfillment process is completed.

Key Benefits of Back-to-Back Fulfillment in Oracle Cloud

- ✓ Optimized Inventory Management - Stock is acquired only when needed, reducing carrying costs.
- ✓ Improved Order Fulfillment Efficiency - Automated supply chain orchestration ensures smooth operations.
- ✓ Enhanced Customer Satisfaction - Orders are processed quickly, reducing delays and backorders.
- ✓ Integrated Supply Chain Execution - Oracle Fusion applications work together seamlessly.
- ✓ Flexibility in Sourcing - Businesses can choose procurement, manufacturing, transfers, or reservations based on demand.

NEW QUESTION # 14

Your supplier has reduced the supply quantity from 100 to 80 for a supply order with a requested quantity of 100. Supply Chain Orchestration is unable to find an alternative source of supply to meet this demand.

What will this supply line be grouped under?

- A. Exception
- B. Error
- C. Jeopardy
- D. Mark for Review

Answer: A
