CWNP Certified Wireless IoT Solutions Administrator(2025 Edition) Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which protocol is MOST commonly used for lightweight, publish/subscribe communication in IoT systems?

- A. HTTP
- B. CoAP
- C. MQTT
- D. AMQP

Answer: C

Explanation:

MQTT is designed for constrained devices, low overhead, and unreliable networks using a publish/subscribe model. Other protocols are too heavy or designed for different communication styles.

NEW QUESTION # 37

You are creating documentation for a new wireless solution that is deployed in the organization. Why is it important to document APIs in use within the system?

- A. The APIs in use will not function without this documentation. The documentation is linked to the executable process of the APIs.
- B. If APIs are in use, it typically indicates that the vendor has not provided ideal support. Without documentation, you cannot prove this reality for a discount.
- C. It allows future support to implement APIs that have not been used at the time of deployment.
- **D. If APIs are in use, it typically indicates the use of custom scripts or application code. Future support will be easier when the APIs in use are documented.**

Answer: D

Explanation:

* Customization and Integrations: The presence of APIs often suggests a system is integrated with other platforms or has custom-built elements.

* Understanding Dependencies: Documenting used APIs helps clarify how different parts of the system interact and where potential issues might arise.

* Troubleshooting Efficiency: Detailed API documentation aids in resolving problems, allowing staff to assess interconnected systems effectively.

* Knowledge transfer: Future support teams won't have to reverse-engineer the system; documentation ensures smooth handover and understanding.

References:

Best practices API documentation: Guides on API documentation formats and the level of detail needed for maintenance. [Example: Swagger, OpenAPI Specification] (<https://swagger.io/>) Software Development Life Cycle (SDLC): Materials emphasizing the importance of documentation during development and support phases.

NEW QUESTION # 38

Why is it important to adhere to safety and building codes when installing equipment?

- **A. It protects the life and health of installers and end users during installation and after the system is deployed**
- B. It prevents equipment from falling to the floor and being damaged because of the impact
- C. They can be ignored as they are regulations designed for other industries
- D. It is an insurance requirement designed to reduce insurance rates and reduce incident reports against insurance policies

Answer: A

Explanation:

Primary Concern: Safety: Building codes and safety regulations are there to prevent injury and accidents. This includes potential harm from improper equipment installation (falling objects, electrical hazards, etc.).

Legal and Ethical Responsibility: Organizations have an obligation to provide a safe workplace for employees and protect the well-being of end-users.

Insurance Considerations: While complying with codes may impact insurance rates, this shouldn't be the primary motivation, as safety itself is paramount.

NEW QUESTION # 39

What is a fundamental structural feature of JSON? (Choose the single best answer.)

- A. It is a data structure stored in MySQL databases for configuration management
- B. It is a compressed data structure optimized for low bandwidth applications
- C. It is an encrypted data structure optimized for secure applications
- **D. It is a plaintext data structure that consists of free-form Key:Value pairs**

Answer: D

Explanation:

JSON Fundamentals: JSON (JavaScript Object Notation) is a text-based format for representing data in a structured, yet flexible way. Its key features are:

Key-Value Pairs: Information is organized as "key":"value" pairs, making it human-readable.

Plaintext: JSON is not encrypted, ensuring easy parsing across different systems.

NEW QUESTION # 40

Which metric is MOST useful for evaluating wireless coverage for an IoT sensor with low receiver sensitivity?

- A. Latency
- **B. RSSI**
- C. Throughput
- D. MTU size

Answer: B

Explanation:

Low-sensitivity sensors require sufficient signal strength (RSSI) for stable operation. Throughput and latency are less relevant for low-data IoT devices.
