For the peace of your mind, you can also try a free demo of Palo Alto Networks PSE-Strata-Pro-24 Dumps practice material. You will not find such affordable and latest material for Palo Alto Networks certification exam anywhere else. Don't miss these incredible offers. Order real Palo Alto Networks PSE-Strata-Pro-24 Exam Questions today and start preparation for the certification exam.

Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.

Topic 2	<ul style="list-style-type: none"> • Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.
Topic 3	<ul style="list-style-type: none"> • Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.
Topic 4	<ul style="list-style-type: none"> • Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.

PSE-Strata-Pro-24 Latest Exam Testking & New PSE-Strata-Pro-24 Test Papers

The contents of PSE-Strata-Pro-24 study materials are all compiled by industry experts based on the examination outlines and industry development trends over the years. And our PSE-Strata-Pro-24 exam guide has its own system and levels of hierarchy, which can make users improve effectively. Our PSE-Strata-Pro-24 learning dumps can simulate the real test environment. After the exam is over, the system also gives the total score and correct answer rate.

Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q22-Q27):

NEW QUESTION # 22

A customer has acquired 10 new branch offices, each with fewer than 50 users and no existing firewall.

The systems engineer wants to recommend a PA-Series NGFW with Advanced Threat Prevention at each branch location. Which NGFW series is the most cost-efficient at securing internet traffic?

- A. PA-200
- B. PA-600
- C. PA-400
- D. PA-500

Answer: C

Explanation:

The PA-400 Series is the most cost-efficient Palo Alto Networks NGFW for small branch offices. Let's analyze the options:

PA-400 Series (Recommended Option)

* The PA-400 Series (PA-410, PA-415, etc.) is specifically designed for small to medium-sized branch offices with fewer than 50 users.

* It provides all the necessary security features, including Advanced Threat Prevention, at a lower price point compared to higher-tier models.

* It supports PAN-OS and Cloud-Delivered Security Services (CDSS), making it suitable for securing internet traffic at branch locations.

Why Other Options Are Incorrect

* PA-200: The PA-200 is an older model and is no longer available. It lacks the performance and features needed for modern branch office security.

* PA-500: The PA-500 is also an older model that is not as cost-efficient as the PA-400 Series.

* PA-600: The PA-600 Series does not exist.

Key Takeaways:

* For branch offices with fewer than 50 users, the PA-400 Series offers the best balance of cost and performance.

NEW QUESTION # 23

A current NGFW customer has asked a systems engineer (SE) for a way to prove to their internal management team that its NGFW follows Zero Trust principles. Which action should the SE take?

- A. Use a third-party tool to pull the NGFW Zero Trust logs, and create a report that meets the customer's needs.
- B. Use the "Monitor > PDF Reports" node to schedule a weekly email of the Zero Trust report to the internal management team
- C. Use the "ACC" tab to help the customer build dashboards that highlight the historical tracking of the NGFW enforcing policies.
- **D. Help the customer build reports that align to their Zero Trust plan in the "Monitor > Manage Custom Reports" tab.**

Answer: D

Explanation:

To demonstrate compliance with Zero Trust principles, a systems engineer can leverage the rich reporting and logging capabilities of Palo Alto Networks firewalls. The focus should be on creating reports that align with the customer's Zero Trust strategy, providing detailed insights into policy enforcement, user activity, and application usage.

* Option A: Scheduling a pre-built PDF report does not offer the flexibility to align the report with the customer's specific Zero Trust plan. While useful for automated reporting, this option is too generic for demonstrating Zero Trust compliance.

* Option B (Correct): Custom reports in the "Monitor > Manage Custom Reports" tab allow the customer to build tailored reports that align with their Zero Trust plan. These reports can include granular details such as application usage, user activity, policy enforcement logs, and segmentation compliance. This approach ensures the customer can present evidence directly related to their Zero Trust implementation.

* Option C: Using a third-party tool is unnecessary as Palo Alto Networks NGFWs already have built-in capabilities to log, report, and demonstrate policy enforcement. This option adds complexity and may not fully leverage the native capabilities of the NGFW.

* Option D: The Application Command Center (ACC) is useful for visualizing traffic and historical data but is not a reporting tool.

While it can complement custom reports, it is not a substitute for generating Zero Trust-specific compliance reports.

NEW QUESTION # 24

What does Policy Optimizer allow a systems engineer to do for an NGFW?

- **A. Identify Security policy rules with unused applications**
- B. Act as a migration tool to import policies from third-party vendors
- C. Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls
- D. Recommend best practices on new policy creation

Answer: A

Explanation:

Policy Optimizer is a feature designed to help administrators improve the efficiency and effectiveness of security policies on Palo Alto Networks Next-Generation Firewalls (NGFWs). It focuses on identifying unused or overly permissive policies to streamline and optimize the configuration.

* Why "Identify Security policy rules with unused applications" (Correct Answer C)? Policy Optimizer provides visibility into existing security policies and identifies rules that have unused or outdated applications. For example:

* It can detect if a rule allows applications that are no longer in use.

* It can identify rules with excessive permissions, enabling administrators to refine them for better security and performance. By addressing these issues, Policy Optimizer helps reduce the attack surface and improves the overall manageability of the firewall.

* Why not "Recommend best practices on new policy creation" (Option A)? Policy Optimizer focuses on optimizing existing policies, not creating new ones. While best practices can be applied during policy refinement, recommending new policy creation is not its purpose.

* Why not "Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls" (Option B)? Policy Optimizer is not related to license management or tracking. Identifying unused licenses is outside the scope of its functionality.

* Why not "Act as a migration tool to import policies from third-party vendors" (Option D)? Policy Optimizer does not function as a migration tool. While Palo Alto Networks offers tools for third-party firewall migration, this is separate from the Policy Optimizer feature.

NEW QUESTION # 25

What are three valid Panorama deployment options? (Choose three.)

- A. As a dedicated hardware appliance (M-100, M-200, M-500, M-600)
- B. On a Raspberry Pi (Model 4, Model 400, Model 5)
- C. As a container (Docker, Kubernetes, OpenShift)
- D. As a virtual machine (ESXi, Hyper-V, KVM)
- E. With a cloud service provider (AWS, Azure, GCP)

Answer: A,D,E

Explanation:

Panorama is Palo Alto Networks' centralized management solution for managing multiple firewalls. It supports multiple deployment options to suit different infrastructure needs. The valid deployment options are as follows:

* Why "As a virtual machine (ESXi, Hyper-V, KVM)" (Correct Answer A)? Panorama can be deployed as a virtual machine on hypervisors like VMware ESXi, Microsoft Hyper-V, and KVM. This is a common option for organizations that already utilize virtualized infrastructure.

* Why "With a cloud service provider (AWS, Azure, GCP)" (Correct Answer B)? Panorama is available for deployment in the public cloud on platforms like AWS, Microsoft Azure, and Google Cloud Platform. This allows organizations to centrally manage firewalls deployed in cloud environments.

* Why "As a dedicated hardware appliance (M-100, M-200, M-500, M-600)" (Correct Answer E)?

Panorama is available as a dedicated hardware appliance with different models (M-100, M-200, M-500, M-600) to cater to various performance and scalability requirements. This is ideal for organizations that prefer physical appliances.

* Why not "As a container (Docker, Kubernetes, OpenShift)" (Option C)? Panorama is not currently supported as a containerized deployment. Containers are more commonly used for lightweight and ephemeral services, whereas Panorama requires a robust and persistent deployment model.

* Why not "On a Raspberry Pi (Model 4, Model 400, Model 5)" (Option D)? Panorama cannot be deployed on low-powered hardware like Raspberry Pi. The system requirements for Panorama far exceed the capabilities of Raspberry Pi hardware.

Reference: Palo Alto Networks Panorama Admin Guide outlines the supported deployment options, which include virtual machines, cloud platforms, and hardware appliances.

NEW QUESTION # 26

The PAN-OS User-ID integrated agent is included with PAN-OS software and comes in which two forms? (Choose two.)

- A. Integrated agent
- B. Windows-based agent
- C. Cloud Identity Engine (CIE)
- D. GlobalProtect agent

Answer: A,B

Explanation:

User-ID is a feature in PAN-OS that maps IP addresses to usernames by integrating with various directory services (e.g., Active Directory). User-ID can be implemented through agents provided by Palo Alto Networks. Here's how each option applies:

* Option A: Integrated agent

* The integrated User-ID agent is built into PAN-OS and does not require an external agent installation. It is configured directly on the firewall and integrates with directory services to retrieve user information.

* This is correct.

* Option B: GlobalProtect agent

* GlobalProtect is Palo Alto Networks' VPN solution and does not function as a User-ID agent.

While it can be used to authenticate users and provide visibility, it is not categorized as a User-ID agent.

* This is incorrect.
