## Accurate CPC-CDE-RECERT Sample Test Online & Leading Offer in Qualification Exams & Free PDF CPC-CDE-RECERT: CyberArk CDE-CPC Recertification

Being respected and gaining a high social status maybe what you always long for. But if you want to achieve that you must own good abilities and profound knowledge in some certain area. Passing the CPC-CDE-RECERT certification can prove that and help you realize your goal and if you buy our CPC-CDE-RECERT Quiz prep you will pass the exam successfully. Our product is compiled by experts and approved by professionals with years of experiences. You can download and try out our latest CPC-CDE-RECERT quiz torrent freely before your purchase.

### CyberArk CDE-CPC Recertification Sample Questions (Q43-Q48):

#### NEW QUESTION # 43

You plan to install Privilege Cloud Connectors on your AWS and Azure environments.

What is the maximum number of concurrent RDP/SSH sessions that each connector can handle for Large Implementations?

- A. 0
- B. 31-60
- C. 1
- D. 1-10

**Answer: B**

Explanation:

For large implementations of CyberArk Privilege Cloud Connectors in AWS and Azure environments, each connector can handle between 31-60 concurrent RDP/SSH sessions. This capacity is specified in the CyberArk documentation concerning Privilege Cloud Connectors and their scalability options. It is designed to support a higher volume of concurrent sessions to meet the needs of

larger enterprise environments, ensuring that multiple users can securely access resources without significant performance degradation.

#### NEW QUESTION # 44

After correctly configuring reconciliation parameters in the Prod-AIX-Root-Accounts Platform, this error message appears in the CPM log: CACPM410E Ending password policy Prod-AIX-Root-Accounts since the reconciliation task is active but the AllowedSafes parameter was not updated What caused this situation?

- A. The reconciliation account defined in the Platform is in a locked state and is not accessible.
- **B. The AllowedSafes parameter does not include the safe containing the reconciliation account defined in the Platform.**
- C. A second CPM is incorrectly configured to manage the reconciliation account's safe which is causing a deadlock situation between the two CPMs.
- D. The CPM is currently configured to use to an unsigned engine.

**Answer: B**

Explanation:

The error message "CACPM410E Ending password policy Prod-AIX-Root-Accounts since the reconciliation task is active but the AllowedSafes parameter was not updated" suggests an issue with configuration parameters. The likely cause is:

\* The AllowedSafes parameter does not include the safe containing the reconciliation account defined in the Platform (Option C).

This parameter must accurately reflect all safes where the reconciliation account operates to ensure proper management and access by the Central Policy Manager (CPM). If the safe containing the reconciliation account is not listed, the CPM cannot perform its tasks, leading to this error.

Reference: CyberArk's error codes and troubleshooting guides detail how specific configuration mismatches, like an incomplete AllowedSafes parameter, can disrupt normal operations, especially in reconciliation processes.

#### NEW QUESTION # 45

What is a requirement for increasing the redundancy of PSMs?

- A. Set it by adding parameters to the basic\_PSM.ini configuration file.
- B. Install the Vault in an HA cluster.
- C. CPM must be in all data centers.
- **D. Use a load balancer.**

**Answer: D**

Explanation:

CyberArk's Privilege Cloud guidance for PSM high availability explicitly ties multiple PSM instances to high availability and load balancing implementations, i.e., redundancy is achieved by deploying multiple PSMs and placing them behind a load balancer.

#### NEW QUESTION # 46

You are creating a PSM Load Balanced Virtual Server Configuration.

What are the default service ports / protocols used for RDS and the PSM Health Check service?

- **A. RDP/3389 HTTPS/443**  
**C UDP/53 HTTPS/389**
- B. RDP/389 HTTP/443
- C. RDP/636 HTTPS/443

**Answer: A**

Explanation:

In a PSM Load Balanced Virtual Server Configuration, the default service ports/protocols used are RDP/3389 and HTTPS/443. RDP (Remote Desktop Protocol) typically uses port 3389 for remote desktop services, which is essential for PSM functionalities involving remote sessions. HTTPS, which utilizes port 443, is used for the PSM Health Check service to ensure secure and encrypted communication during the monitoring and health verification processes of the PSM services.

### NEW QUESTION # 47

On Privilege Cloud, what can you use to update users' Permissions on Safes? (Choose 2.)

- A. PrivateArk Client
- B. Privilege Cloud Portal
- C. PTA
- D. REST API
- E. PACLI

**Answer: B,D**

Explanation:

On CyberArk Privilege Cloud, updating users' permissions on safes can be done through the Privilege Cloud Portal and the REST API. The Privilege Cloud Portal provides a user-friendly graphical interface where administrators can manage user permissions directly within the portal's safe management settings.

Additionally, the REST API offers a programmable way to automate permission updates across safes, which is especially useful for bulk changes or integrating with other management tools. Both methods provide effective means to manage and customize access controls in a CyberArk environment, allowing for detailed permission settings per user on specific safes.

### NEW QUESTION # 48

.....

Our CPC-CDE-RECERT Online test engine is convenient and easy to learn, it supports all web browsers. If you want, you can have offline practice. One of the most outstanding features of CPC-CDE-RECERT Online test engine is it has testing history and performance review. You can have general review of what you have learnt. Besides, CPC-CDE-RECERT Exam Braindumps offer you free demo to have a try before buying. You can get the downloading link and password within ten minutes after payment. CPC-CDE-RECERT exam dumps contain both questions and answers, and it's convenient for you to check your answers.

**CPC-CDE-RECERT Actual Test:** <https://www.preppdf.com/CyberArk/CPC-CDE-RECERT-prepaway-exam-dumps.html>

CPC-CDE-RECERT exam dumps also have most of knowledge points of the exam, and they may help you a lot, Thanks again I cleared CPC-CDE-RECERT test in the first attempt, So our CPC-CDE-RECERT exam braindumps can help you stick out the average once you compete with others in the same situation for their professional team consisted of professional experts and elites in this area, The CPC-CDE-RECERT is not very difficult with our practice material.

In order to improve the CPC-CDE-RECERT passing score of our candidates, we take every step to improve our profession and check the updating of CPC-CDE-RECERT pass guide.

Many times in life and many times in software CPC-CDE-RECERT applications, you have to make choices about the general approach to performing a task or solving a problem, CPC-CDE-RECERT Exam Dumps also have most of knowledge points of the exam, and they may help you a lot.

## 100% Pass Quiz 2026 Accurate CyberArk CPC-CDE-RECERT: CyberArk CDE-CPC Recertification Sample Test Online

Thanks again I cleared CPC-CDE-RECERT test in the first attempt, So our CPC-CDE-RECERT exam braindumps can help you stick out the average once you compete with others in the same situation Latest CPC-CDE-RECERT Test Answers for their professional team consisted of professional experts and elites in this area.

The CPC-CDE-RECERT is not very difficult with our practice material, In the meanwhile, you can enjoy the best service in our company.
