UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which three roles from the Implementation Team participate in the Kickoff stage?

- A. Business Analyst, Solution Architect, Client SME
- **B. Project Manager, Solution Architect, Infrastructure Engineer**
- C. Project Manager, Business Analyst, Automation Developer
- D. Automation Developer, Project Manager, UAT Tester

Answer: B

Explanation:

The three Implementation Team roles that participate in the Kickoff stage are:

- * Project Manager
- * Solution Architect
- * Infrastructure Engineer

In this stage, the Project Manager ensures that responsibilities and timelines are clear, the Solution Architect begins understanding the technical landscape, and the Infrastructure Engineer initiates discussions about access, environments, and setup requirements. Together, they define the project plan, infrastructure needs, high-level scope, and stakeholder involvement. Their early involvement ensures that any blockers (especially around access and infrastructure) are addressed from the start, minimizing risks and delays in later stages.

NEW QUESTION # 24

Which automation category does automating repetitive tasks such as data entry and document processing fall into?

- **A. Task Automation**
- B. Business Process Management
- C. Attended Automation
- D. Process Mining

Answer: A

Explanation:

Task Automation is the category of automation that focuses on repetitive, rule-based tasks such as data entry, data extraction, file management, and document processing. These are typically structured, high-volume activities that do not require complex decision-making.

Task Automation is often implemented using unattended robots, which can execute these tasks in the background with minimal or no human intervention. This type of automation is a core use case of Robotic Process Automation (RPA) and is ideal for improving efficiency, reducing errors, and saving time.

In UiPath, such tasks are built using UiPath Studio, tested in development environments, and deployed to Orchestrator for scheduling and management. Task Automation is usually the first step for organizations starting their automation journey due to its high ROI and low complexity.

NEW QUESTION # 25

Which document is used to define how UAT will be conducted and by whom?

- **A. User Acceptance Testing (UAT) Plan**
- B. Solution Design Document
- C. Access Control Matrix
- D. Project Charter

Answer: A

Explanation:

The User Acceptance Testing (UAT) Plan is the document that defines how UAT will be conducted, who will participate, what test scenarios will be used, and what constitutes success.

This plan typically includes:

- * Roles and responsibilities during testing
- * UAT schedule and timelines
- * Test data and environment setup
- * Test cases and expected outcomes
- * Defect management and resolution protocol

The UAT Plan ensures a structured and coordinated approach to acceptance testing. It is typically prepared by the Business Analyst and Project Manager, and is reviewed by both the Implementation and Client Teams to ensure alignment before testing begins.

NEW QUESTION # 26

Which of the following best describes the main benefit of documenting an organized lifecycle for automation projects?

- A. Increased need for manual approval
- B. Reduces the need for communication among teams
- C. Consistent quality, faster turnaround, and successful implementations
- D. Delays in testing and review

Answer: C

Explanation:

Documenting and following an organized lifecycle for automation projects - as outlined in the UiPath Automation Implementation Methodology - leads to consistent quality, faster turnaround times, and more successful implementations.

Each stage in the lifecycle - from Kickoff to Project Closure - has defined roles, responsibilities, deliverables, and checkpoints. This structured approach helps teams stay aligned, reduces misunderstandings, enables better risk management, and ensures that issues are caught early.

With a clear lifecycle, automation projects become repeatable, scalable, and manageable, even as the number of automated processes grows. This approach supports long-term success and helps organizations build sustainable automation programs with measurable value.

NEW QUESTION # 27

Which document defines the technical components, logic, and structure of the future automation solution?

- A. Process Definition Document (PDD)
- B. Solution Design Document (SDD)
- C. Statement of Work (SOW)
- D. UAT Plan

Answer: B

Explanation:

The Solution Design Document (SDD) is the document that defines the technical components, logic, and architecture of the future automation solution. It is created primarily during the Solution Design stage by the Solution Architect, often in collaboration with Automation Developers.

The SDD outlines:

- * To-Be process flows
- * Module structure and logic
- * Exception handling strategy
- * Integration points with other systems
- * Infrastructure and access requirements

It serves as the blueprint that guides developers during the implementation phase. A detailed and well-reviewed SDD ensures that development is aligned with expectations, minimizes rework, and supports scalable, maintainable automation solutions.
