It demonstrates that the individual has the skills and knowledge required to implement and administer the Discovery application in a production environment, and can help to advance their career in the field of IT service management and infrastructure management.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q71-Q76):

NEW QUESTION # 71

What would be the relation between Application Server [cndb_ci_app_server] table and Tomcat [cndb_ci_app_server_tomcat] table.

(Choose 2 answers.)

Response:

- A. The Tomcat table is a parent of the Application Server table.
- B. The Tomcat table does not extend the Application Server table.
- C. The Tomcat table is a child of the Application Server.
- D. The Tomcat extends the Application Server.

Answer: C,D

NEW QUESTION # 72

The CMDB contains which of the following record types? (Choose two.)

- A. Model
- B. Relation Type
- C. Asset
- D. Configuration Item (CI)

Answer: B,D

Explanation:

The CMDB contains records of configuration items (CIs) and their relationships. A CI is any component that needs to be managed in order to deliver an IT service, such as a server, an application, or a user. A relation type defines the nature of the connection between two CIs, such as depends on, uses, or contains. A model is a template for a CI that defines its attributes and default values. An asset is a tangible or intangible resource that is tracked and managed by the organization, such as a laptop, a license, or a contract.

NEW QUESTION # 73

Which of the following describes the recommended permission level for credentials to discover Windows Servers?

- A. A userr00t access across the domain
- B. A domain administrator with sudo access

- C. A standard domain user with read access
- **D. A domain user with local administrator access**

Answer: D

Explanation:

For discovering Windows Servers, ServiceNow Discovery recommends using credentials that have a domain user account with local administrator access on the target servers. This level of access ensures that Discovery can successfully execute the necessary probes and sensors to collect comprehensive data about the server without being restricted by permission limitations. The other options either provide excessive permissions (like a domain administrator with sudo access) or insufficient privileges (like a standard domain user with read access).

NEW QUESTION # 74

What are the two main options within a Parse File operation?

- A. Select Operating System and Method
- B. Match and Select File
- C. Discover Now and Quick Discovery
- **D. Select File and Define Parsing**

Answer: D

NEW QUESTION # 75

What would you see in the Discovery pattern log that you would not see in the ECC Queue?

- A. Relationships created
- **B. Success or failure of the individual pattern steps**
- C. Shazzam probe payload
- D. Payload of CI attributes and relationships

Answer: B

Explanation:

The Discovery pattern log is a log that records the execution of a pattern during Discovery or Service Mapping¹. It shows the success or failure of the individual pattern steps, as well as the input and output variables, the CI attributes and relationships, and the errors or warnings². The ECC Queue is a table that displays the input and output messages from and to MID Servers³. It shows the payload of CI attributes and relationships, the Shazzam probe payload, and the relationships created, but not the success or failure of the individual pattern steps⁴. The success or failure of the individual pattern steps is specific to the Discovery pattern log and can be used to debug or troubleshoot the pattern execution².
