

ARA-C01 Visual Cert Test | Download ARA-C01 Fee

What's more, part of that TorrentExam ARA-C01 dumps now are free: https://drive.google.com/open?id=125PhPhVG3x2-rCOK16F-4NC-Pdo_DT88

You many attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you wants and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due rule? You should choose the test Snowflake certification and buys our ARA-C01 learning file to solve the problem. Passing the test ARA-C01 certification can help you increase your wage and be promoted easily and buying our ARA-C01 prep guide dump can help you pass the test smoothly. Our ARA-C01 Certification material is closely linked with the test and the popular trend among the industries and provides all the information about the test. The answers and questions seize the vital points and are verified by the industry experts. Diversified functions can help you get an all-around preparation for the test. Our online customer service replies the clients' questions about our ARA-C01 certification material at any time.

Snowflake ARA-C01 Exam Syllabus Topics:

Section	Objectives
Topic 1: Performance and Optimization	- Cost optimization 1. Storage and compute efficiency 2. Resource monitoring and cost control
	- Query performance tuning 1. Warehouse sizing and scaling 2. Query profiling and optimization techniques

	- Design scalable Snowflake architectures • 1. Multi-cluster virtual warehouse design • 2. Account and environment strategy
Topic 2: Data Architecture and Design	- Data modeling and schema design • 1. Semi-structured data modeling • 2. Star and snowflake schema concepts - Access control and security model • 1. Network security and authentication • 2. Role-based access control (RBAC)
Topic 3: Security, Governance, and Compliance	- Data governance • 1. Data classification and masking policies • 2. Audit and compliance features - Secure data sharing
Topic 4: Data Sharing and Collaboration	• 1. Data marketplace concepts • 2. Cross-account data sharing - Data orchestration • 1. Pipeline design patterns • 2. Tasks and Streams usage
Topic 5: Data Pipelines and Data Engineering	- Data ingestion and transformation • 1. Batch and streaming ingestion • 2. Snowpipe and continuous data loading

TorrentExam ARA-C01 practice test has real ARA-C01 exam questions. You can change the difficulty of these questions, which will help you determine what areas appertain to more study before taking your Snowflake ARA-C01 Exam Dumps. Here we listed some of the most important benefits you can get from using our Snowflake ARA-C01 practice questions.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q108-Q113):

NEW QUESTION # 108

An Architect uses COPY INTO with the ON_ERROR=SKIP_FILE option to bulk load CSV files into a table called TABLEA, using its table stage. One file named file5.csv fails to load. The Architect fixes the file and re-loads it to the stage with the exact same file name it had previously.

Which commands should the Architect use to load only file5.csv file from the stage? (Choose two.)

- A. COPY INTO tablea FROM @%tablea;
- B. COPY INTO tablea FROM @%tablea FORCE = TRUE;
- C. COPY INTO tablea FROM @%tablea RETURN_FAILED_ONLY = TRUE;
- D. COPY INTO tablea FROM @%tablea MERGE = TRUE;
- E. COPY INTO tablea FROM @%tablea NEW_FILES_ONLY = TRUE;
- F. COPY INTO tablea FROM @%tablea FILES = ('file5.csv');

Answer: A,F

NEW QUESTION # 109

Why might a Snowflake Architect use a star schema model rather than a 3NF model when designing a data architecture to run in Snowflake? (Select TWO).

- A. The Architect wants to remove data duplication from the data stored in Snowflake.
- B. The Architect is designing a landing zone to receive raw data into Snowflake.
- C. Snowflake cannot handle the joins implied in a 3NF data model.
- **D. The Architect wants to present a simple flattened single view of the data to a particular group of end users.**
- **E. The BI tool needs a data model that allows users to summarize facts across different dimensions, or to drill down from the summaries.**

Answer: D,E

Explanation:

A star schema model is a type of dimensional data model that consists of a single fact table and multiple dimension tables. A 3NF model is a type of relational data model that follows the third normal form, which eliminates data redundancy and ensures referential integrity. A Snowflake Architect might use a star schema model rather than a 3NF model when designing a data architecture to run in Snowflake for the following reasons:

* A star schema model is more suitable for analytical queries that require aggregating and slicing data across different dimensions, such as those performed by a BI tool. A 3NF model is more suitable for transactional queries that require inserting, updating, and deleting individual records.

* A star schema model is simpler and faster to query than a 3NF model, as it involves fewer joins and less complex SQL statements. A 3NF model is more complex and slower to query, as it involves more joins and more complex SQL statements.

* A star schema model can provide a simple flattened single view of the data to a particular group of end users, such as business analysts or data scientists, who need to explore and visualize the data. A 3NF model can provide a more detailed and normalized view of the data to a different group of end users, such as application developers or data engineers, who need to maintain and update the data.

The other options are not valid reasons for choosing a star schema model over a 3NF model in Snowflake:

* Snowflake can handle the joins implied in a 3NF data model, as it supports ANSI SQL and has a powerful query engine that can optimize and execute complex queries efficiently.

* The Architect can use both star schema and 3NF models to remove data duplication from the data stored in Snowflake, as both models can enforce data integrity and avoid data anomalies. However, the trade-off is that a star schema model may have more data redundancy than a 3NF model, as it denormalizes the data for faster query performance, while a 3NF model may have less data redundancy than a star schema model, as it normalizes the data for easier data maintenance.

* The Architect can use both star schema and 3NF models to design a landing zone to receive raw data into Snowflake, as both models can accommodate different types of data sources and formats.

However, the choice of the model may depend on the purpose and scope of the landing zone, such as whether it is a temporary or permanent storage, whether it is a staging area or a data lake, and whether it is a single source or a multi-source integration.

NEW QUESTION # 110

Which technique will efficiently ingest and consume semi-structured data for Snowflake data lake workloads?

- A. Schema-on-write
- B. IDEF1X
- **C. Schema-on-read**
- D. Information schema

Answer: C

Explanation:

Option C is the correct answer because schema-on-read is a technique that allows Snowflake to ingest and consume semi-structured data without requiring a predefined schema. Snowflake supports various semi-structured data formats such as JSON, Avro, ORC, Parquet, and XML, and provides native data types (ARRAY, OBJECT, and VARIANT) for storing them. Snowflake

also provides native support for querying semi-structured data using SQL and dot notation. Schema-on-read enables Snowflake to query semi-structured data at the same speed as performing relational queries while preserving the flexibility of schema-on-read. Snowflake's near-instant elasticity rightsizes compute resources, and consumption-based pricing ensures you only pay for what you use.

Option A is incorrect because IDEF1X is a data modeling technique that defines the structure and constraints of relational data using diagrams and notations. IDEF1X is not suitable for ingesting and consuming semi-structured data, which does not have a fixed schema or structure.

Option B is incorrect because schema-on-write is a technique that requires defining a schema before loading and processing data. Schema-on-write is not efficient for ingesting and consuming semi-structured data, which may have varying or complex structures that are difficult to fit into a predefined schema. Schema-on-write also introduces additional overhead and complexity for data transformation and validation.

Option D is incorrect because information schema is a set of metadata views that provide information about the objects and privileges in a Snowflake database. Information schema is not a technique for ingesting and consuming semi-structured data, but rather a way of accessing metadata about the data.

NEW QUESTION # 111

Which of the below commands lists all the pipes for which you have access?

- A. LIST @PIPES
- B. SHOW PIPES()
- C. Display Pipes()
- D. LIST PIPES()

Answer: B

NEW QUESTION # 112

Which semi-structured data function returns an OBJECT constructed from the arguments.

- A. OBJECT_INSPECT
- B. OBJECT_CONSTRUCT
- C. OBJECT_ARRAY

Answer: B

NEW QUESTION # 113

.....

Due to busy routines, applicants of the SnowPro Advanced Architect Certification (ARA-C01) exam need real Snowflake exam questions. When they don't study with updated Snowflake ARA-C01 practice test questions, they fail and lose money. If you want to save your resources, choose updated and actual ARA-C01 Exam Questions of TorrentExam. At the TorrentExam offer students Snowflake ARA-C01 practice test questions, and 24/7 support to ensure they do comprehensive preparation for the ARA-C01 exam.
