資格考試和一年級Peoplecert ITIL Foundation (Version 5)的100%合格率最新ITILFNDv5題庫資源和領先提供者

VCESoft擁有一個由龐大的Peoplecert行業精英組成的團隊。他們都在Peoplecert行業中有很高的權威。他們利用專業的知識和經驗不斷地為準備參加ITILFNDv5相關認證考試的人提供培訓材料。VCESoft提供的考試練習題和答案準確率很高，可以100%保證你ITILFNDv5考試一次性成功，而且還免費為你提供一年的更新服務。

最新的 Peoplecert Certification ITILFNDv5 免費考試真題 (Q98-Q103):

問題 #98

Which dimension of product and service management addresses data and technologies used in digital product and services?

- A. Information and technology
- B. Value streams and processes
- C. Organizations and people
- D. Partners and suppliers

答案: A

解題說明:

Information and technology is the dimension that addresses the data and technologies used in digital products and services, so option D is correct. ITIL explains that this dimension includes applications, infrastructure, tools, automation, analytics, AI, monitoring, communication systems, and the management of data, information, and knowledge. It also includes concerns such as data quality, access, governance, security, and technology capability. This dimension is central in digital product and service management because technology not only supports service delivery, but often forms the core of the product itself. Partners and suppliers covers external organizations, organizations and people covers structure and skills, and value streams and processes covers workflows. Therefore, when the focus is specifically on data and technological enablement, the correct ITIL dimension is information and technology.

問題 #99

Why are Value streams and processes' important in product and service management?

- A. They specify the tools used for service monitoring
- **B. They show how activities are coordinated to create and deliver value**
- C. They describe supplier agreements and help manage contracts
- D. They define organizational hierarchies and reporting lines

答案: B

解題說明:

Value streams and processes are important because they show how activities are coordinated to create and deliver value, so option B is correct. In ITIL, the value streams and processes dimension focuses on how work flows through the organization and across organizational boundaries. It helps explain the sequence of activities, dependencies, handoffs, and interactions that transform demand into useful outcomes for stakeholders. This is essential because value creation is rarely achieved by one team or one isolated activity. Tools, reporting lines, and contracts may support management, but they are not the main concern of this dimension. ITIL stresses that actual work as performed should be understood, mapped, analyzed, and improved. Value streams make the flow of value visible, while processes provide structured guidance for recurring activities that support that flow.

問題 #100

Which value chain activity ensures a shared understanding of the current status and required direction for all products and services?

- A. Design and transition
- **B. Plan**
- C. Deliver and support
- D. Improve

答案: B

問題 #101

Which of the following is TRUE about value co-creation?

- A. Value is defined and consumed by a service provider
- B. Value is created only by the service provider and delivered to the consumer
- **C. Value is created jointly through interactions between service providers and service consumers**
- D. value is created independently of service relationships

答案: C

解題說明:

Value co-creation means that value is created jointly through interactions between service providers and service consumers, so option D is correct. ITIL moved away from the idea that value is simply produced by the provider and handed over to the consumer. Instead, value emerges through the combination of provider offerings, consumer participation, context, usage, and the wider service relationship. A service may offer strong utility and warranty, but the actual value realized depends on how the consumer uses it and what outcomes are achieved. This is why ITIL emphasizes service relationships, shared responsibilities, and stakeholder perspectives.

Value is not created independently of those relationships, and it is not defined solely by the provider. Co-creation reflects the dynamic and interactive nature of modern digital product and service management.

問題 #102

Why are management practices important for value chain activities?

- A. They enable value chain activities by providing the required capabilities
- B. They ensure activities are performed in a fixed order
- C. They define the organization's purpose and strategy
- D. They replace value chain activities with standardized processes

答案： A

解題說明：

Management practices are important because they enable value chain activities by providing the capabilities needed to perform them effectively, so option B is correct. In ITIL, value chain activities are high-level lifecycle activities such as discover, design, build, transition, operate, deliver, support, and acquire. These activities do not happen in isolation. They depend on practices such as architecture, incident management, change enablement, knowledge management, service level management, supplier management, and many others. Practices bring together people, information, technology, partners, and processes to support work in a structured and repeatable way. They do not define the organization's overall purpose, and they do not force a fixed order of execution. Instead, they supply the organizational capability that allows value chain activities to function and connect effectively within the broader value system.

問題 #103
