preparation. Take the right decision regarding your quick AWS Certified Developer Associate Exam (DVA-C02) (AWS-Developer) exam questions preparation and download the real, valid, and updated AWS-Developer exam dumps and start this journey.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q239-Q244):

NEW QUESTION # 239
A company is building a software as a service application. As part of the new user sign-on workflow, a Python script invokes the CreateTable operation using the Amazon DynamoDB API. After the call returns, the script attempts to call PutItem. Occasionally, the PutItem request fails with a ResourceNotFoundException error, which causes the workflow to fail. The development team has confirmed that the same table name is used in the two API calls.
How should a database specialist fix this issue?

- A. Add an allow statement for the dynamodb:PutItem action in a policy attached to the role used by the application creating the table.
- B. Set the StreamEnabled property of the StreamSpecification parameter to true, then call PutItem.
- C. Change the application to call DescribeTable periodically until the TableStatus is ACTIVE, then call PutItem.
- D. Add a ConditionExpression parameter in the PutItem request.

Answer: D

Explanation:
Explanation/Reference: https://docs.aws.amazon.com/amazondynamodb/latest/APIReference/API_PutItem.html

NEW QUESTION # 240
A developer has created a REST API using Amazon API Gateway. The developer wants to log who and how each caller accesses the API. The developer also wants to control how long the logs are kept.
What should the developer do to meet these requirements?

- A. Enable detailed Amazon CloudWatch metrics. Delete old logs with a recurring AWS Lambda function.
- B. Create and use API Gateway usage plans. Delete old logs with a recurring AWS Lambda function.
- C. Enable API Gateway execution logging. Delete old logs using API Gateway retention settings.
- D. Enable API Gateway access logs. Use Amazon CloudWatch retention settings to delete old logs.

Answer: A

NEW QUESTION # 241
A developer must allow guest users without logins to access an Amazon Cognito-enabled site to view files stored within an Amazon S3 bucket How should the developer meet these requirements'?

- A. Create a blank user ID in a user pool, add to the user group, and grant access to AWS resources
- B. Create a new identity pool, enable access to unauthenticated identities and grant access to AWS resources
- C. Create a new user pool, enable access to unauthenticated identities, and grant access to AWS resources.
- D. Create a new user pool disable authentication access, and grant access to AWS resources

Answer: C

NEW QUESTION # 242
A developer built an application that calls an external API to obtain data, processes the data, and saves the result to Amazon S3.
The developer built a container image with all of the necessary dependencies to run the application as a container.
The application runs locally and requires minimal CPU and RAM resources. The developer has created an Amazon ECS cluster.
The developer needs to run the application hourly in Amazon ECS.
Which solution will meet these requirements with the LEAST amount of infrastructure management overhead?

- A. Add a capacity provider to manage instances.
- B. Add an Amazon EC2 instance that runs the application.

- C. Create an Amazon ECS cluster and add the managed node groups feature to run the application.
- D. Define a task definition with an AWS Fargate launch type.

Answer: D

Explanation:
Requirement Summary:
* Containerized app
* Runs hourly
* Minimal CPU and RAM
* Goal: Least infrastructure management
Evaluate Options:
A). Add a capacity provider to manage instances
* # Capacity providers are used for managing EC2-backed ECS clusters, which still require underlying EC2 management.
B). Add an Amazon EC2 instance
* # Involves managing infrastructure (provisioning, patching, scaling, etc.)
# C. Use AWS Fargate launch type
* # Serverless container runtime
* # No server management
* # Easily scheduled using EventBridge + ECS Fargate Task
* # Best fit for periodic workloads like this
D). Use managed node groups
* # Applies to EKS (Kubernetes), not ECS
* Unnecessary overhead for this use case
* Fargate: https://docs.aws.amazon.com/AmazonECS/latest/developerguide/what-is-fargate.html
* Scheduled ECS tasks: https://docs.aws.amazon.com/AmazonECS/latest/developerguide
/scheduled_tasks.html

NEW QUESTION # 243
An organization is using Amazon CloudFront to ensure that its users experience low-latency access to its web application. The organization has identified a need to encrypt all traffic between users and CloudFront, and all traffic between CloudFront and the web application.
How can these requirements be met? (Choose two.)

- A. Set the Origin Protocol Policy to "HTTPS Only".
- B. Set the Origin's HTTP Port to 443.
- C. Set the Viewer Protocol Policy to "HTTPS Only" or "Redirect HTTP to HTTPS".
- D. Use AWS KMS to encrypt traffic between CloudFront and the web application.
- E. Enable the CloudFront option Restrict Viewer Access.

Answer: B,D

Explanation:
https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/using-https-viewers-to-cloudfront.html
https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/using-https-cloudfront-to-custom-origin.html

NEW QUESTION # 244
......
