## Mule-Arch-201考試備考經驗 & Mule-Arch-201在線題庫

在這個人才濟濟的社會裏，你不覺得壓力很大嗎，不管你的學歷有多高，它永遠不代表實力。學歷只是一個敲門磚，而實力確是你穩固自己地位的基石。Salesforce的Mule-Arch-201考試認證就是一個流行的IT認證，很多人都想

擁有它，有了它就可以穩固自己的職業生涯，NewDumps Salesforce的Mule-Arch-201考試認證培訓資料是個很好的培訓工具，它可以幫助你成功的通過考試而獲得認證，有了這個認證，你將得到國際的認可及接受，那時的你再也不用擔心被老闆炒魷魚了。

## 最新的 Salesforce MuleSoft Mule-Arch-201 免費考試真題 (Q71-Q76):

### 問題 #71

A client has several applications running on the Salesforce service cloud. The business requirement for integration is to get daily data changes from Account and Case Objects. Data needs to be moved to the client's private cloud AWS DynamoDB instance as a single JSON and the business foresees only wanting five attributes from the Account object, which has 219 attributes (some custom) and eight attributes from the Case Object.

What design should be used to support the API/ Application data model?

- A. Create separate entities for Account and Case Objects by mimicking all the attributes in SAPI, which are combined by the PAPI and filtered to provide JSON output containing 13 attributes.
- B. Start implementing an Enterprise Data Model by defining enterprise Account and Case Objects and implement SAPI and DynamoDB tables based on the Enterprise Data Model,
- C. Request client's AWS project team to replicate all the attributes and create Account and Case JSON table in DynamoDB. Then create separate entities for Account and Case Objects by mimicking all the attributes in SAPI to transfer JSON data to DynamoD for respective Objects
- **D. Create separate entities for Account with five attributes and Case with eight attributes in SAPI, which are combined by the PAPI to provide JSON output containing 13 attributes.**

答案: D

解題說明:

Understanding the Requirements:

The business needs to transfer daily data changes from the Salesforce Account and Case objects to AWS DynamoDB in a single JSON format.

Only a subset of attributes (5 from Account and 8 from Case) is required, so it is not necessary to include all 219 attributes of the Account object.

Design Approach:

A System API (SAPI) should be created for each Salesforce object (Account and Case), exposing only the required fields (5 attributes for Account and 8 for Case).

A Process API (PAPI) can be used to aggregate and transform the data from these SAPIs, combining the 13 selected attributes from Account and Case into a single JSON structure for DynamoDB.

Evaluating the Options:

Option A: Mimicking all attributes in the SAPI is inefficient and unnecessary, as only 13 attributes are required.

Option B: Replicating all attributes in DynamoDB is excessive and would result in higher storage and processing costs, which is unnecessary given the requirement for only a subset of attributes.

Option C: Implementing an Enterprise Data Model could be useful in broader data management but is not required here, as the focus is on a lightweight integration.

Option D (Correct Answer): Creating separate entities in SAPI for Account and Case with only the required attributes and using the PAPI to aggregate them into a single JSON is the most efficient and meets the requirements effectively.

Conclusion:

Option D is the best choice as it provides a lightweight, efficient design that meets the requirements by transferring only the necessary attributes and minimizing resource use.

Refer to MuleSoft's best practices for API-led connectivity and data modeling to structure SAPIs and PAPIs efficiently.

### 問題 #72

A company is building an application network using MuleSoft's recommendations for various API layers.

What is the main (default) role of a process API in an application network?

- **A. To automate parts of business processes by coordinating and orchestrating the invocation of other APIs in the application network**
- B. To secure and optimize the data synchronization processing of large data dumps between back-end systems
- C. To secure, Manage, and process communication with specific types of end-user client applications or devices in the application network
- D. To manage and process the secure direct communication between a back-end system and an end-user client of mobile device in the application network

答案： A

解題說明：

Role of Process API in API-led Connectivity:

In MuleSoft's API-led connectivity approach, a Process API is used to coordinate, aggregate, and orchestrate data from various System APIs. It is primarily responsible for implementing business logic that spans multiple backend systems or entities, transforming and combining data as needed to support business processes.

Process APIs are not directly exposed to end-user clients; rather, they work between System APIs and Experience APIs, providing business logic and orchestration capabilities.

Evaluating the Options:

Option A: Process APIs are not typically responsible for large data dumps or data synchronization. That function would be handled by a System API or a specialized batch process.

Option B: Managing direct, secure communication between back-end systems and end-user clients is typically the role of Experience APIs rather than Process APIs.

Option C (Correct Answer): Process APIs are designed to coordinate and orchestrate calls to multiple other APIs in the network, which supports the automation of business processes.

Option D: Securing and managing communication with end-user clients is typically the role of Experience APIs, not Process APIs.

Conclusion:

Option C is the correct answer, as the main role of a Process API is to coordinate and orchestrate interactions between other APIs, enabling business processes to function seamlessly across multiple systems.

Refer to MuleSoft's API-led connectivity documentation for further explanation of the roles and responsibilities of Process APIs in an application network.

### 問題 #73

In an organization, the InfoSec team is investigating Anypoint Platform related data traffic.

From where does most of the data available to Anypoint Platform for monitoring and alerting originate?

- A. From the Mule runtime irrespective of the deployment model
- B. From various components of Anypoint Platform, such as the Shared Load Balancer, VPC, and Mule runtimes
- C. From the Mule runtime or the API implementation, depending on the deployment model
- D. From the Mule runtime or the API Manager, depending on the type of data

答案： A

解題說明：

Correct Answer: From the Mule runtime irrespective of the deployment model

\*\*\*\*\*

>> Monitoring and Alerting metrics are always originated from Mule Runtimes irrespective of the deployment model.

>> It may seem that some metrics (Runtime Manager) are originated from Mule Runtime and some are (API Invocations/ API Analytics) from API Manager. However, this is realistically NOT TRUE. The reason is, API manager is just a management tool for API instances but all policies upon applying on APIs eventually gets executed on Mule Runtimes only (Either Embedded or API Proxy).

>> Similarly all API Implementations also run on Mule Runtimes.

So, most of the day required for monitoring and alerts are originated from Mule Runtimes only irrespective of whether the deployment model is MuleSoft-hosted or Customer-hosted or Hybrid.

### 問題 #74

In which layer of API-led connectivity, does the business logic orchestration reside?

- A. System Layer
- B. Experience Layer
- C. Process Layer

答案： C

解題說明：

Correct Answer: Process Layer

\*\*\*\*\*

>> Experience layer is dedicated for enrichment of end user experience. This layer is to meet the needs of different API clients/

consumers.

>> System layer is dedicated to APIs which are modular in nature and implement/ expose various individual functionalities of backend systems

>> Process layer is the place where simple or complex business orchestration logic is written by invoking one or many System layer modular APIs So, Process Layer is the right answer.

#### 問題 #75

Which of the following sequence is correct?

- A. API Client implements logic to call an API >> API Consumer requests access to API >> API routes the request to >> API Implementation
- **B. API Consumer requests access to API >> API Client implements logic to call an API >> API routes the request to >> API Implementation**
- C. API Consumer implements logic to call an API >> API Client requests access to API >> API Implementation routes the request to >> API
- D. API Client implements logic to call an API >> API Consumer requests access to API >> API Implementation routes the request to >> API

答案: B

解題說明:

Correct Answer: API Consumer requests access to API >> API Client implements logic to call an API >> API routes the request to >> API Implementation

\*\*\*\*\*

>> API consumer does not implement any logic to invoke APIs. It is just a role. So, the option stating "API Consumer implements logic to call an API" is INVALID.

>> API Implementation does not route any requests. It is a final piece of logic where functionality of target systems is exposed. So, the requests should be routed to the API implementation by some other entity. So, the options stating "API Implementation routes the request to >> API" is INVALID

>> The statements in one of the options are correct but sequence is wrong. The sequence is given as "API Client implements logic to call an API >> API Consumer requests access to API >> API routes the request to >> API Implementation". Here, the statements in the options are VALID but sequence is WRONG.

>> Right option and sequence is the one where API consumer first requests access to API on Anypoint Exchange and obtains client credentials. API client then writes logic to call an API by using the access client credentials requested by API consumer and the requests will be routed to API implementation via the API which is managed by API Manager.

#### 問題 #76

.....

目前Salesforce的Mule-Arch-201認證考試真的是一門人氣很高的考試。還沒有取得這個考試的認證資格的你，是不是也想參加考試呢？確實，這是一門很難的考試。但是這並不代表不能獲得高分輕鬆通過考試。那麼，還不知道通過這個考試的捷徑在哪里的你，是不是想知道通過考試的技巧呢？現在我來告訴你，就是利用NewDumps的Mule-Arch-201考古題。

**Mule-Arch-201考試備考經驗:** <https://www.newdumpspdf.com/Mule-Arch-201-exam-new-dumps.html>

所以你要是參加Salesforce Mule-Arch-201 認證考試並且選擇我們的NewDumps, NewDumps不僅可以保證為你提供一份覆蓋面很廣和品質很好的考試資料來讓您做好準備來面對這個非常專業的考試，而且幫你順利通過Salesforce Mule-Arch-201 認證考試拿到認證證書，NewDumps Mule-Arch-201考試備考經驗題庫網能協助以溫馨學習，協助考生於升學、就業上一臂之力，免於成為社會邊緣人的命運，追求數量，做的越多，感覺對Mule-Arch-201考試幫助越大，沒關係，你可以使用NewDumps的Mule-Arch-201考試資料，Salesforce Mule-Arch-201考試備考經驗認證考試學習資料下載\_考試認證題庫NewDumps Mule-Arch-201考試備考經驗，選擇了NewDumps不僅可以保證你100%通過Mule-Arch-201認證考試，並且還會為你提供一年的免費的練習題和答案的更新服務。

奸細，該死的奸細，那小賊既然都到了我們家門口，自然還在這望月城中，所以你要是參加Salesforce Mule-Arch-201 認證考試並且選擇我們的NewDumps, NewDumps不僅可以保證為你提供一份覆蓋面很廣和品質很好的考試資料來讓您做好準備來面對這個非常專業的考試，而且幫你順利通過Salesforce Mule-Arch-201 認證考試拿到認證證書。
