

Valid 300-745 Test Objectives - 300-745 New Study Plan

You can save a lot of time for collecting real-time information if you choose our 300-745 study guide. Because our professionals have done all of these collections for you and they are more specialized in the field. So the keypoints are all contained in the 300-745 Exam Questions. Besides, in order to ensure that you can see the updated 300-745 practice prep as soon as possible, our system will send the updated information to your email address as soon as possible.

You can become part of this skilled and qualified community. To do this you must enroll in the Free4Dump Cisco 300-745 certification exam and start preparation with real and valid Designing Cisco Security Infrastructure (300-745) exam practice test questions right now. The Free4Dump 300-745 Exam Practice test questions are checked and verified by experienced and qualified 300-745 exam trainers. So you can trust Free4Dump Cisco 300-745 exam practice test questions and start preparation with confidence.

Pass Guaranteed Cisco 300-745 Designing Cisco Security Infrastructure First-grade Valid Test Objectives

You will earn the Cisco 300-745 certification on the first try if you use 300-745 Questions. Our high-quality Cisco 300-745 practice questions preparation material in three formats will help you crack the Cisco 300-745 Exam in one go. For the Cisco 300-745 exam dumps, we offer Cisco 300-745 PDF questions, desktop 300-745 practice test software, and web-based 300-745 practice exam software.

Cisco Designing Cisco Security Infrastructure Sample Questions (Q48-Q53):

NEW QUESTION # 48

A developer company recently made a contract with new customer in the financial space. The customer has multiple remote sites and requires a VPN solution with the highest encryption.

Which protocol must be used in IPsec Phase 2?

- A. SD-WAN
- B. ISAKMP
- C. ESP
- D. IKE

Answer: C

Explanation:

In IPsec Phase 2, the Encapsulating Security Payload (ESP) protocol is used to provide confidentiality, integrity, and authentication for VPN traffic. ESP ensures the highest encryption and protection for sensitive financial data across remote sites.

NEW QUESTION # 49

Refer to the exhibit. In addition to SSL decryption, which firewall feature allows malware to be blocked?

□

- A. SSL Offloading
- **B. File Inspection**
- C. URL Filtering
- D. DLP

Answer: B

Explanation:

In the exhibit, SSL decryption is already enabled, which allows encrypted traffic to be inspected.

To block malware hidden within decrypted traffic, the next required feature is File Inspection. This function analyzes files passing through the firewall to detect and stop malicious content.

NEW QUESTION # 50

An engineering company's Chief Financial Officer recently fall victim to a phishing scam by responding to an urgent email. The mail appeared to be from a trusted business partner, and it requested sensitive tax information. The incident led to significant financial and reputational damage. To prevent similar occurrences in the future, the security team must implement an effective mitigation strategy. Which mitigation strategy must the security team implement to prevent similar occurrences in the future?

- A. data loss prevention strategy
- B. granular port security strategy
- **C. targeted education campaign**
- D. upstream traffic filter

Answer: C

Explanation:

A targeted education campaign directly addresses phishing by training employees, especially high-value targets like executives, to recognize social engineering attempts. While technical controls help, phishing primarily exploits human behavior, so awareness and training are the most effective preventive measures.

NEW QUESTION # 51

A technology company recently onboarded a new customer in the medical space. The customer needs a solution to provide data integrity across remote sites. Which solution must be used to meet this requirement?

- A. preshared key
- **B. hashing**
- C. data masking
- D. authentication

Answer: B

Explanation:

Hashing ensures data integrity by generating a fixed-length value (hash) for data. When data is transmitted between remote sites, the hash can be recalculated and compared to verify that the data has not been altered in transit.

NEW QUESTION # 52

A global energy company moved a monolithic application from the data center to public cloud.

Over time, the company added many capabilities to the application, and it is now difficult for the application team to scale it. The application owner decided to modernize the application by moving to a Kubernetes cluster. However, he wants to ensure that the new application architecture provides a container network interface that is scalable, offers options for cloud-native security, and helps with visibility and observability. Which solution must be used to accomplish the task?

- **A. Cilium**
- B. security group
- C. ingress gateway
- D. ENI

Answer: A

Cilium is a Kubernetes Container Network Interface (CNI) that provides scalability, cloud-native security with eBPF-based enforcement, and strong visibility/observability into network traffic between microservices. It is purpose-built to modernize applications running in Kubernetes clusters.
