Test CIS-PA Dumps Demo, Practice CIS-PA Exam Fee

Our CIS-PA training materials are regarded as the most excellent practice materials by authority. Our company is dedicated to researching, manufacturing, selling and service of the CIS-PA study guide. Also, we have our own research center and experts team. So our products can quickly meet the new demands of customers. That is why our CIS-PA Exam Questions are popular among candidates. we have strong strength to support our CIS-PA practice engine.

ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.
Topic 2	<ul style="list-style-type: none">• Data Visualization: This section focuses on presenting data through widgets, interactive filters, appropriate visualizations, dashboards, and analyzing data using Analytics Hub and KPI Details.
Topic 3	<ul style="list-style-type: none">• Architecture and Deployment: This domain covers the foundational components of the Performance Analytics solution and the proper deployment sequence in ServiceNow environments.
Topic 4	<ul style="list-style-type: none">• Perform Diagnostics and Troubleshooting: This section addresses identifying and resolving issues using Spotlight diagnostic tools to monitor system health and performance.
Topic 5	<ul style="list-style-type: none">• Administration and Solutions: This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q10-Q15):

NEW QUESTION # 10

What is the purpose of a Breakdown Source?

- A. It defines a default elements filter
- **B. It identifies unique breakdown elements for classification**
- C. It specifies the options available for non-categorical data
- D. It specifies which indicators are available to a breakdown

Answer: B

Explanation:

A Breakdown Source defines how data is classified into distinct breakdown elements for analysis. It identifies the table and field (or script) used to generate the unique values—such as categories, priorities, assignment groups, or buckets—that segment indicator scores.

Default element filters are configured on the Breakdown, not the Breakdown Source. Indicators are linked to Breakdowns through Breakdown Mappings, not selected at the source level. While bucket-based sources support non-categorical data, their core purpose remains identifying unique breakdown elements. ServiceNow documentation emphasizes that the Breakdown Source is responsible for defining where breakdown values come from and how they are identified, making option C the correct answer.

NEW QUESTION # 11

What should the target for the Index and its supporting indicators be set to when creating an Index Indicator?

- A. 100% and Minimize
- B. 0% and Minimize
- **C. 100% and Maximize**
- D. 0% and Maximize

Answer: C

Explanation:

An Index Indicator in Platform Analytics represents a composite score calculated from multiple supporting indicators. According to ServiceNow best practices, both the Index and its supporting indicators should be normalized so that higher values represent better performance. Therefore, the correct configuration is a target of 100% with a Maximize direction.

This standardization ensures consistent weighting and scoring logic across all contributing indicators. If supporting indicators were set to Minimize or had inconsistent targets, the index calculation would produce misleading or inverted results. Options involving a 0%

target are incorrect because index scores are designed to trend toward full achievement, represented as 100%. ServiceNow documentation clearly states that index indicators assume maximization logic for proper normalization and aggregation, making option D the correct and documented choice.

NEW QUESTION # 12

What functionality lets you visualize indicator data over time in units representing periods such as a year, quarter, and similar fiscal periods?

- A. Timecard Calendars
- B. Business Calendars
- C. Fiscal Calendars
- D. Gregorian Calendars

Answer: C

Explanation:

Fiscal Calendars allow Platform Analytics to aggregate and visualize indicator data using fiscal periods such as fiscal years, quarters, and accounting periods. This is essential for organizations that do not follow standard calendar years for reporting and performance measurement.

Gregorian calendars use standard date boundaries, while Business Calendars define working and non-working time for duration calculations. Timecard calendars are unrelated to analytics aggregation. ServiceNow documentation clearly states that fiscal period-based analysis is enabled through Fiscal Calendars, making option B the correct answer.

NEW QUESTION # 13

Which scenario requires a scripted Breakdown Mapping?

- A. The value needed for the Breakdown is available only as a dot-walked field
- B. There is no direct mapping between the Indicator field and the Breakdown table
- C. The field to map to is of type Sys ID
- D. The table being mapped is a database view and not an actual table

Answer: B

Explanation:

Scripted Breakdown Mappings are required when there is no direct field relationship between the Indicator source data and the Breakdown source table. In such cases, standard field mapping cannot resolve how indicator records should be categorized, so a script is needed to programmatically determine the correct breakdown value.

Mapping to a Sys ID field (option B) is supported through standard mappings. Database views (option C) can still be mapped if fields are accessible. Dot-walked fields (option D) are commonly supported without scripting. According to ServiceNow Platform Analytics documentation, scripted mappings are specifically intended for complex or indirect relationships, making option A the correct answer.

NEW QUESTION # 14

When are Additional conditions of an Indicator evaluated during Data Collection?

- A. Before the Indicator Source conditions
- B. After the Indicator Source conditions
- C. At the same time as the Indicator Source conditions
- D. When the Indicator is viewed in the Analytics Hub

Answer: B

Explanation:

During data collection, Platform Analytics first applies the Indicator Source conditions to retrieve the base dataset. Once the source data is identified, the system then evaluates the Additional conditions defined on the Indicator itself.

This separation allows indicator-specific filtering without duplicating logic in the indicator source, supporting reuse and performance optimization. Additional conditions do not run in parallel with source conditions and are not evaluated at visualization time.

ServiceNow documentation explicitly explains that Indicator conditions refine the dataset after the source query executes, making

option D the correct answer.

NEW QUESTION # 15

.....

We can calculate that CIS-PA certification exam is the best way by which you can learn new applications, and tools and mark your name in the list of best employees in your company. You don't have to be dependent on anyone to support you in your professional life, but you have to prepare for PDFVCE real Certified Implementation Specialist - Platform Analytics (CIS-PA) exam questions.
