The Actual4Dumps is committed to making the Microsoft SC-900 certification exam preparation simple, smart, and successful. To achieve this objective Actual4Dumps is offering top-notch and real SC-900 exam questions in three different formats. The names of these Microsoft Security Compliance and Identity Fundamentals (SC-900) exam questions formats are PDF files, desktop practice test software, and web-based SC-900 practice test software.

Microsoft SC-900 certification exam is a relatively new exam, having been introduced in 2020. However, it has quickly gained popularity among IT professionals due to the increasing importance of security, compliance, and identity concepts in today's digital landscape. SC-900 Exam is also a great way to prepare for other more advanced security and compliance exams, such as the Microsoft Certified: Azure Security Engineer Associate or the Microsoft Certified: Compliance Administrator Associate exams.

Maximizing Your Microsoft SC-900 Exam Preparation with Practice Tests

Our specialists check whether the contents of SC-900 real exam are updated every day. If there are newer versions, they will be sent to users in time to ensure that users can enjoy the latest resources in the first time. In such a way, our SC-900 Guide materials can have such a fast update rate that is taking into account the needs of users. And we will always send our customers with the latest and accurate SC-900 exam questions.

Microsoft Security Compliance and Identity Fundamentals Sample Questions (Q144-Q149):

NEW QUESTION # 144

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Microsoft's security and compliance learning content explains that digital signatures are built on public key (asymmetric) cryptography. In this model, each identity has a key pair: a private key that is kept secret and a public key that can be shared. The signing operation is performed with the private key to produce a signature bound to the content and the signer's identity. Verification is then performed by anyone who has access to the corresponding public key, which mathematically validates the signature and confirms both integrity (the content wasn't altered) and authenticity (it was signed by the holder of the private key). SCI materials (covering Microsoft Purview Information Protection, Azure Key Vault/PKI concepts, and identity fundamentals) emphasize that the private key must never be disclosed or required for verification; only the public key is used to validate signatures and certificates. This is the same principle used across Microsoft 365 for certificate-based trust, code signing, and document signing: sign with the private key; verify with the public key. Therefore, statements one and two are true, and the statement claiming verification requires the private key is false.

NEW QUESTION # 145

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation

Graphical user interface, text Description automatically generated

NEW QUESTION # 146

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 147

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Microsoft's shared-responsibility model states that the cloud provider secures the cloud, while the customer secures what they put in the cloud. The Azure Security documentation explains: "Regardless of the type of deployment, you always retain responsibility for your data, endpoints, accounts, and access management." This applies to IaaS, PaaS, and SaaS, so statement 3 is Yes because the organization is always accountable for the security of information and data.

For SaaS, Microsoft describes that customers "don't manage or control the underlying cloud infrastructure- including network, servers, operating systems, or even individual application capabilities" and that the provider handles service maintenance and updates. In SaaS, tasks like patching or applying service packs to the application code are owned by the service provider, while the customer focuses on data, identity, and access. Therefore, statement 1 is No.

For IaaS, Microsoft notes the provider manages the physical estate: "Microsoft is responsible for the physical hosts, network, and datacenter facilities," while the customer configures and secures the guest OS, applications, and network controls within their subscription. Thus, managing the physical network is the cloud provider's duty, making statement 2 Yes.

These SCI principles are foundational to Microsoft Learn/Docs guidance on Azure's shared responsibility: provider-"security OF the cloud"; customer-"security IN the cloud," with data protection always remaining the customer's responsibility.

NEW QUESTION # 148

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 149

.....

You can use this Microsoft simulation software without an internet connection after installation. Tracking and reporting features of our Microsoft Security Compliance and Identity Fundamentals SC-900 Practice Exam software makes it easier for you to identify and overcome mistakes. Customization feature of this format allows you to change time limits and questions numbers of mock exams.
