最新的 HCIP-Datacom H12-821_V1.0 免費考試真題 (Q502-Q507):

問題 #502
Which of the following attributes may not be included in the Update message of a BGP route? (Multiple choice)

- A. Local_Preference
- B. MED
- C. AS_Path
- D. 0rigin

答案：A,B

問題 #503
Which of the following statements regarding Local-Preference in BGP is true?

- A. The default Local-Preference value is 100.
- B. Local-Preference affects traffic that enters an AS.
- C. Local-Preference is a well-known mandatory attribute.
- D. Local-Preference can be transmitted between ASs.

答案：A

問題 #504
Which of the following statements about the forwarding plane of a switch is false?

- A. Consists of main control boards and interface boards.
- B. Can encapsulate and decapsulate packets.
- C. Provides high-speed and non-blocking data channels.
- D. Can collect packet statistics.

答案：A

解題說明：
The forwarding plane of a switch consists of data forwarding hardware, such as line cards or forwarding engines, and is responsible for tasks like encapsulating/decapsulating packets, providing high-speed data channels, and collecting packet statistics. However, main control boards are part of the control plane, not the forwarding plane. This distinction ensures a separation of data forwarding and control functionalities .

問題 #505
During routine operation and maintenance, an engineer checks the IGMP configuration on RTA. The configuration is as follows:
Interface information of VPN-Instance: public net
GigabitEthernet0/0/1 (192.168.1.1):
IGMP is enabled
Current IGMP version is 2
IGMP state: up
IGMP group policy: none
IGMP limit: -
Value of query interval for IGMP (negotiated): -
Value of query interval for IGMP (configured): 60 s
Value of other querier timeout for IGMP: 0 s
Value of maximum query response time for IGMP: 10 s
Querier for IGMP: 192.168.1.1 (this router)
Given this, which of the following statements is false?

- A. The IP address of the interface is 192.168.1.1.
- B. The interval for sending Group-Specific Query messages is 60s.
- C. The IGMP version is IGMPv2.
- D. The maximum response time to Query messages is 10s.

答案：B

解題說明：
Comprehensive and Detailed Step-by-Step Explanation:
1. Understanding IGMP (Internet Group Management Protocol):
* IGMP is used in multicast networking to manage membership of devices in multicast groups.
* Key parameters in the configuration provided:
* Interface IP Address: 192.168.1.1
* IGMP Version: 2
* Query Interval (Configured): 60 seconds
* Maximum Query Response Time: 10 seconds
* Querier Address: 192.168.1.1
2. Analysis of Each Statement:
Option A: The IP address of the interface is 192.168.1.1.
* Correct (True Statement).
* The configuration clearly shows that the IP address of the interface is 192.168.1.1.
Option B: The maximum response time to Query messages is 10s.
* Correct (True Statement).
* The configuration explicitly mentions: Value of maximum query response time for IGMP: 10 s.
Option C: The interval for sending Group-Specific Query messages is 60s.
* Incorrect (False Statement).
* The 60-second value refers to the query interval, which is the time interval between general queries sent by the querier.
* The interval for group-specific queries is not specified in this configuration. It is determined dynamically based on the multicast environment and is usually shorter than the general query interval.
Option D: The IGMP version is IGMPv2.
* Correct (True Statement).

* The configuration specifies: Current IGMP version is 2.
3. Why Option C is False:
* The 60-second value is for general query interval, not group-specific query interval.
* The statement misinterprets the configuration, making it false.
4. Summary:
* Correct Answer C (The interval for sending Group-Specific Query messages is 60s).
