## UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q170-Q175):

### NEW QUESTION # 170

According to best practices, what is the approach a Business Analyst should take when encountering low-quality process documentation?

- A. Fill in the gaps and recommend a version of the process to the stakeholders
- B. Make sure the scope of the project is clearly defined and documented
- C. Communicate the impact to the stakeholders and get their approval to move forward
- **D. Start documenting the process at a high level and then go into details**

**Answer: D**

Explanation:

According to best practices, when a Business Analyst encounters low-quality process documentation, the recommended approach is to start by documenting the process at a high level and then delve into the details. This method allows the Business Analyst to establish a clear overview of the process, which can then be refined and expanded upon to ensure all aspects are thoroughly documented. It is essential to capture the core elements of the process first, which provides a framework for identifying and filling in the gaps with more detailed information.

### NEW QUESTION # 171

What is one of the advantages of using a Test Scenario Document?

- A. To help when the project is on a tight schedule
- **B. To ensure better organization**
- C. To help when applications are very complicated
- D. To help while regression test is performed

**Answer: B**

Explanation:

Utilizing a Test Scenario Document in testing, particularly within the context of UiPath Test Suite, facilitates better organization of test cases and sets. This documentation approach helps manage test activities more effectively, ensuring that each test case is clearly defined, organized, and accessible. This organizational benefit is crucial for maintaining clarity and efficiency in testing processes, especially when dealing with complex or extensive test scenarios. One of the key advantages of using a Test Scenario Document is to ensure better organization throughout the testing process. This document serves as a structured guide for both creating test cases and tracking their execution. It helps in organizing test scenarios in a way that ensures comprehensive coverage of the application's functionality and business requirements. By documenting scenarios, teams can more easily manage, execute, and review test results, leading to more efficient quality assurance processes.

### NEW QUESTION # 172

What is the purpose of human in the loop?

- A. Human in the loop allows the human to stop a running process.
- B. Human in the loop enables human execution flows.
- **C. Human in the loop enables human validation in the middle of the process.**
- D. Human in the loop allows the human to pause a running process.

**Answer: C**

Explanation:

"Human in the loop" is a core concept in UiPath automation solutions, where automation might require human input or decisions to complete a task. Specifically, UiPath defines it as:

"Human-in-the-loop (HITL) involves incorporating human validation steps within an automated workflow to manage exceptions, validate data, or make decisions that require human judgment." This concept is a fundamental part of processes that require human expertise or compliance checks, typically seen in document processing, data extraction, and exception handling.

### NEW QUESTION # 173

When an application stops responding, what should it be treated as?

- A. Unknown Exception
- **B. System Exception**
- C. Business Exception
- D. Known Exception

**Answer: B**

Explanation:

When an application stops responding, this should be treated as a System Exception. System Exceptions refer to errors that occur due to unforeseen issues in the system environment, such as application failures, network errors, or hardware malfunctions, which are beyond the control of the business logic of the automation. ### NEW QUESTION # 174

Which of the following can be found in the Process Overview part of the PDD?

- **A. High Level As-Is Process Map**
- B. Applications names and versions
- C. Process schedule and frequency
- D. Process SME and Process Owner

**Answer: A**

Explanation:

In the Process Overview part of the Process Design Document (PDD), a high-level As-Is Process Map is included. This part typically encompasses the current state of the process, outlining the steps, decisions, and interactions that occur in the process as it currently exists without automation.
