## AZ-204 Real Exam Questions, Training AZ-204 Tools

Pass4suresVCE are supposed to help you pass the exam smoothly. Don't worry about channels to the best AZ-204 study materials because we are the exactly best vendor in this field for more than ten years. And so many exam candidates admire our generosity of the AZ-204 Practice Questions offering help for them. Up to now, no one has ever challenged our leading position of this area. With our AZ-204 training guide, you will be doomed to pass the exam successfully.

## Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q475-Q480):

### NEW QUESTION # 475

You need to implement the corporate website.  
How should you configure the solution?

□

**Answer:**

Explanation:

□

Explanation:

□

### NEW QUESTION # 476

You need to configure Azure CDN for the Shipping web site.

Which configuration options should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□

Explanation

□

Scenario: Shipping website

Use Azure Content Delivery Network (CDN) and ensure maximum performance for dynamic content while minimizing latency and costs.

Tier: Standard

Profile: Akamai

Optimization: Dynamic site acceleration

Dynamic site acceleration (DSA) is available for Azure CDN Standard from Akamai, Azure CDN Standard from Verizon, and Azure CDN Premium from Verizon profiles.

DSA includes various techniques that benefit the latency and performance of dynamic content. Techniques include route and network optimization, TCP optimization, and more.

You can use this optimization to accelerate a web app that includes numerous responses that aren't cacheable.

Examples are search results, checkout transactions, or real-time data. You can continue to use core Azure CDN caching capabilities for static data.

Reference:

<https://docs.microsoft.com/en-us/azure/cdn/cdn-optimization-overview>

### NEW QUESTION # 477

You need to migrate on-premises shipping data to Azure.

What should you use?

- A. Azure Cosmos DB Data Migration tool (dt.exe)
- B. Azure Migrate
- C. Azure Database Migration service
- D. AzCopy

**Answer: C**

Explanation:

Explanation

Migrate from on-premises or cloud implementations of MongoDB to Azure Cosmos DB with minimal downtime by using Azure Database Migration Service. Perform resilient migrations of MongoDB data at scale and with high reliability.

Scenario: Data migration from on-premises to Azure must minimize costs and downtime.

The application uses MongoDB JSON document storage database for all container and transport information.

<https://azure.microsoft.com/en-us/updates/mongodb-to-azure-cosmos-db-online-and-offline-migrations-are-now->

Topic 3, City Power & Light

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the **Next** button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Background

City Power & Light company provides electrical infrastructure monitoring solutions for homes and businesses.

The company is migrating solutions to Azure.

Current environment

Architecture overview

The

company has a public website located at <http://www.cpandl.com/>. The site is a single-page web application that runs in Azure App Service on Linux. The website uses files stored in Azure Storage and cached in Azure Content Delivery Network (CDN) to serve static content.

API Management and Azure Function App functions are used to process and store data in Azure Database for PostgreSQL. API Management is used to broker communications to the Azure Function app functions for Logic app integration. Logic apps are used to orchestrate the data processing while Service Bus and Event Grid handle messaging and events.

The solution uses Application Insights, Azure Monitor, and Azure Key Vault.

Architecture diagram

The company has several applications and services that support their business. The company plans to implement serverless computing where possible. The overall architecture is shown below.

User authentication

The following steps detail the user authentication process:

- \* The user selects **Sign in** in the website.
- \* The browser redirects the user to the Azure Active Directory (Azure AD) sign in page.
- \* The user signs in.
- \* Azure AD redirects the user's session back to the web application. The URL includes an access token.
- \* The web application calls an API and includes the access token in the authentication header. The application ID is sent as the audience ('aud') claim in the access token.
- \* The back-end API validates the access token.

Requirements

Corporate website

- \* Communications and content must be secured by using SSL.
- \* Communications must use HTTPS.
- \* Data must be replicated to a secondary region and three availability zones.
- \* Data storage costs must be minimized.

Azure Database for PostgreSQL

The database connection string is stored in Azure Key Vault with the following attributes:

- \* Azure Key Vault name: cpandlkeyvault
- \* Secret name: PostgreSQLConn
- \* Id: 80df3e46ffcd4f1cb187f79905e9a1e8

The connection information is updated frequently. The application must always use the latest information to connect to the database.

Azure Service Bus and Azure Event Grid

- \* Azure Event Grid must use Azure Service Bus for queue-based load leveling.
- \* Events in Azure Event Grid must be routed directly to Service Bus queues for use in buffering.
- \* Events from Azure Service Bus and other Azure services must continue to be routed to Azure Event Grid for processing.

Security

- \* All SSL certificates and credentials must be stored in Azure Key Vault.
- \* File access must restrict access by IP, protocol, and Azure AD rights.
- \* All user accounts and processes must receive only those privileges which are essential to perform their intended function.

Compliance

Auditing of the file updates and transfers must be enabled to comply with General Data Protection Regulation (GDPR). The file updates must be read-only, stored in the order in which they occurred, include only create, update, delete, and copy operations, and be retained for compliance reasons.

Issues

Corporate website

While testing the site, the following error message displays:

CryptographicException: The system cannot find the file specified.

Function app

You perform local testing for the **RequestUserApproval** function. The following error message displays:

"Timeout value of 00:10:00 exceeded by function: RequestUserApproval"

The same error message displays when you test the function in an Azure development environment when you run the following Kusto query:

FunctionAppLogs

| where FunctionName == "RequestUserApproval"

Logic app

You test the Logic app in a development environment. The following error message displays:

'400 Bad Request'

Troubleshooting of the error shows an HttpTrigger action to call the RequestUserApproval function.

Code

Corporate website

Security.cs:

Function app

RequestUserApproval.cs:

### NEW QUESTION # 478

You are developing an application that runs in several customer Azure Kubernetes Service clusters. Within each cluster, a pod runs that collects performance data to be analyzed later, a large amount of data is collected so saving latency must be minimized. The performance data must be stored so that pod restarts do not impact the stored data. Write latency should be minimized.

You need to configure blob storage.

How should you complete the YAML configuration? To answer, select the appropriate options in the answer area.

**Answer:**

Explanation:

Graphical user interface, text, application, email Description automatically generated

### NEW QUESTION # 479

You are developing an Azure Function App by using Visual Studio. The app will process orders input by an Azure Web App. The web app places the order information into Azure Queue Storage.

You need to review the Azure Function App code shown below.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-functions/functions-bindings-storage-queue>

### NEW QUESTION # 480

.....

It is quite clear that most candidates are at their first try, therefore, in order to let you have a general idea about our AZ-204 test engine, we have prepared the free demo in our website. The contents in our free demo are part of the real materials in our AZ-204 study engine. Just like the old saying goes "True blue will never strain" You are really welcomed to download the free demo in our website to have the firsthand experience, and then you will find out the unique charm of our AZ-204 Actual Exam by yourself.

**AZ-204 Real Exam Questions:** <https://www.pass4suresvce.com/AZ-204-pass4sure-vce-dumps.html>

Act now, join us, and buy our AZ-204 study materials, You can learn from your Developing Solutions for Microsoft Azure (AZ-204) practice test mistakes and overcome them before the actual AZ-204 exam, AZ-204 announce several changes, Training materials provided by Pass4suresVCE AZ-204 Real Exam Questions are very practical, and they are absolutely right for you, Just spent some time regularly on our AZ-204 exam simulation, your possibility of getting it will be improved greatly.

A model for defining distributed client interfaces AZ-204 Exam Syllabus to the services provided by these components, The amount

of degradation depends on the type of compression used, the AZ-204 amount of compression used, and the bitrate at which the audio file was recorded.
