如果你購買了Testpdf的教材，那麼你就獲得了一年免費更新的服務。當考古題被更新時，Testpdf會馬上將最新版的資料發送到你的郵箱。你也可以隨時要求我們為你提供最新版的考古題。如果你想瞭解最新的考試試題，即使你已經成功通過CCRN-Adult考試，Testpdf也會為你免費更新CCRN-Adult考試考古題。

AACN CCRN-Adult 考試大綱：

主題	簡介
主題 2	In musculoskeletal, neurological, and psychosocial areas, the syllabus includes managing trauma, neurological disorders, and behavioral health issues. This emphasizes the holistic approach required in critical care settings. Lastly, multisystem complications such as sepsis and shock states are included to assess the ability to manage life-threatening conditions that affect multiple organ systems.
主題 3	CLINICAL JUDGMENT: This section measures the skills of Critical Care Nurses and covers a wide range of medical conditions across various systems. It includes cardiovascular issues such as acute coronary syndrome, heart failure, and cardiomyopathies, demonstrating the need for in-depth knowledge in managing these critical conditions. The section also addresses respiratory emergencies like pulmonary embolism and ARDS, emphasizing the importance of understanding respiratory failure and chronic conditions.
主題 5	The endocrine, hematology, gastrointestinal, renal, and integumentary domains are also covered, focusing on conditions like diabetes mellitus, acute kidney injury, and infections. This section highlights the need for nurses to manage complex patient scenarios involving multiple systems effectively.

主題 6	Facilitation of learning is emphasized, indicating the role of nurses in educating patients and families about health management. Collaboration is another key component, focusing on teamwork within healthcare settings to improve patient outcomes. Systems thinking is included to encourage understanding of how different components of healthcare interact. Finally, clinical inquiry is highlighted as a means to foster evidence-based practice and continuous improvement in patient care.

CCRN-Adult PDF題庫，CCRN-Adult下載

最近，身邊考 AACN 認證的人也是相當多的，那麼，怎麼去準備 CCRN-Adult 考試呢？建議大家，可以先到考試中心去打聽這科考試的有關的情況。了解考試的流程，考試的注意事項。預約一個合適的時間去報名參加考試即可。為了更有把握的通過考試，可以看看Testpdf考題網的 CCRN-Adult 題庫，上面的題目都是真題，很准，我做了很多遍的練習。練習題有些部分超出了 AACN 的要求，但是對於扎實的掌握知識是很有幫助的，建議做完，搞懂。這是你輕鬆通過考試的最好的方法。

最新的 AACN CCRN CCRN-Adult 免費考試真題 (Q905-Q910):

問題 #905

Which of the following is LEAST effective in helping to reduce the risk of aspiration in patients who are receiving enteral feedings?

- A. Verifying the placement of the feeding tube every four hours
- B. Checking gastric residual volumes at least once every four hours
- C. Avoiding bolus feedings
- D. Ensure the head of the patient's bed is elevated to at least a 30° angle

答案：B

解題說明：

While checking Gastric Residual Volumes (GVRs) is routine in many clinical institutions, there is no evidence supporting the assumption that checking GVRs or adjusting tube feedings based on GVRs reduces the risk of aspiration. Verifying the correct placement of tube feedings, avoiding bolus feedings, and ensuring the patient's HOB (Head of Bed) is elevated to at least 30° all have been shown to reduce the risk of aspiration.

問題 #906

The classic triad of Cushing's response, seen late in the course of neurologic deterioration, is marked by three vital sign changes. All of the following are vital sign changes observed in this triad EXCEPT:

- A. widened pulse pressure
- B. bradycardia
- C. hyperthermia
- D. irregular respiratory pattern

答案：C

解題說明：

Cushing's response refers to a triad of vital sign changes seen late in the course of neurologic deterioration. The classic triad is marked by widened pulse pressure, bradycardia, and an irregular respiratory pattern.

Temperature is carefully monitored in patients with neurologic dysfunction because hyperthermia (regardless of infectious or noninfectious origin) causes increased cerebral metabolic demand. It is generally seen earlier (not later) in the course of neurologic deterioration.

問題 #907

A patient struggling with a chronic, terminal disease expresses suicidal thoughts to their nurse. Which of the following interventions is MOST important?

- A. Arrange for 1:1 observation
- B. Arrange for psychiatric consultation
- C. Involve the family in a group discussion
- D. Remove any monitoring equipment or cords that may be used as ligatures

答案： A

解題說明：

Arranging for 1:1 observation is the appropriate immediate action, as it ensures the patient's safety.

Arranging for psychiatric consultation is important, but does not address the immediate risk of harm.

Involving the family in a group discussion can be part of a larger treatment plan but does not address immediate safety concerns.

Removing monitoring equipment or cords that may be used as ligatures may impair the ability to correctly monitor the patient.

Rather, 1:1 observations should be used to prevent misuse of monitoring equipment or cords.

問題 #908

When a patient with flail chest inspires, which of the following should the nurse expect to see?

- A. The trachea will move towards from the affected side
- B. The flail chest segment will move inwards
- C. The flail chest segment will move outwards
- D. The trachea will move away from the affected side

答案： B

解題說明：

Flail chest occurs when three or more contiguous ribs are fractured in at least two places, causing a free- floating flail chest segment of the chest wall. This segment will move inward during the negative pressure caused by inspiration and outwards with the positive pressure of expiration. This causes

"paradoxical breathing", creating a less effective ventilatory pattern. Tracheal movement is not a common finding with flail chest.

問題 #909

An ICU patient is experiencing low cardiac output syndrome. Which of the following vasopressors is indicated when the desired effect is vasoconstriction without tachycardia?

- A. Norepinephrine (Levophed)
- B. Phenylephrine (Neosynephrine)
- C. Epinephrine
- D. Dopamine (Intropin)

答案： B

解題說明：

Epinephrine, norepinephrine, and dopamine all have a combination of alpha and beta stimulation, producing both vasoconstriction and increased cardiac stimulation (inotropic and chronotropic responses). This makes the heart beat both stronger and faster.

Phenylephrine is only an alpha stimulant, so there is less direct effect on the heart; it is a pure vasoconstrictor without direct cardiac effect and is useful when the desired effect is vasoconstriction without increased heart rate.

問題 #910
