NEW QUESTION # 34

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import
- B. You can change the name of a group during import, although this will not change the group's name in Active Directory
- **C. New users created as a result of importing a group are assigned the site role specified during the import**
- D. Importing a group from Active Directory requires a .csv file that lists user IDs

Answer: C

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

* New users get Explorer.

* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

* Why: Ensures consistent onboarding-new users align with the group's intended access.

* Option A (Existing users' roles change to match import): Incorrect.

* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.

* Option B (Requires a .csv file): Incorrect.

* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

* Option C (Change group name during import): Incorrect.

* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.
