Platform-App-Builder 학습자료 & Platform-App-Builder 인증시험자료

Salesforce 인증 Platform-App-Builder 시험을 어떻게 패스할까 고민 그만하고 ExamPassdump의 Salesforce 인증 Platform-App-Builder 시험대비 덤프를 데려가 주세요. 가격이 착한데 비해 너무나 훌륭한 덤프 품질과 높은 적중율, ExamPassdump가 아닌 다른 곳에서 찾아볼 수 없는 혜택입니다.

최신 Salesforce App Builder Platform-App-Builder 무료 샘플문제 (Q124-Q129):

질문 # 124

An App Builder wants to deploy a new version of an auto launched flow to production in an active state so that the new functionality is immediately available to users. What should the App Builder take into consideration when planning the deployment?

- A. Manually activate the Flow after deployment
- **B. Verify there is an Apex test that provides test coverage for the Flow.**
- C. Grant user access to the Flow.
- D. Include the Process Builder calling the Flow in the deployment

정답: B

설명:

The app builder should verify that there is an Apex test that provides test coverage for the Flow. An Apex test is a unit test that verifies the functionality and quality of Apex code. Apex tests are required to deploy any change that contains Apex code or references Apex code, such as an auto launched flow³. The app builder should ensure that there is an Apex test that covers at least 75% of the Flow logic before deploying it to production in an active state⁴. Option B, C, and D are not things that the app builder should take into consideration when planning the deployment.

질문 # 125

In order to create an App Launcher component in Lightning an admin must _____.

- A. Purchase a license for the Lightning App Builder.
- B. Navigate to Setup-Customize-User Interface to enable the component for the Lightning App Builder.
- C. Join the pilot Lightning App Builder team.
- **D. Contact Salesforce to have the component activated for the Lightning App Builder.**

정답: D

질문 # 126

Universal Containers would like to show different values to different groups of users in a custom picklist field. What should be configured?

- **A. Record Types**
- B. Page layouts
- C. Permission sets
- D. Field-level security

정답: A

질문 # 127

What are two reasons to create an unmanaged package? Choose 2 answers

- A. Distributing upgradeable components to another Salesforce org
- B. Publishing an application for sale on the AppExchange
- C. Deploying from a Developer Edition environment
- D. Distributing open-source projects on the AppExchange.

정답: C,D

설명:

The two reasons to create an unmanaged package are to distribute open-source projects on the AppExchange and to deploy from a Developer Edition environment. An unmanaged package is a collection of components that can be installed in any Salesforce org but cannot be upgraded or controlled by the developer. An unmanaged package can be used to share open-source projects or to deploy components from a Developer Edition environment to another org.

질문 # 128

A custom field on an account is used to track finance information about a customer. Only members of the Finance Team have access to this field. However, the business wants to allow one customer service agent, who is assigned the customer service profile, read-only access to this field for special circumstances. What is the recommended solution to grant the customer service agent access to the field?

- A. Update the custom field's Field Level Security in setup to allow the agent read-only access to the field.
- B. Update the Customer Service Profile already assigned to the agent to allow for read-only access to the field via Field Level Security
- C. Create a new profile to allow for read-only access to the field via Field Level Security and assign it to the agent
- D. Create a permission set that allows read-only access to the field via Field Level Security and assign it to the agent.

정답: D

설명:

Explanation

The recommended solution to grant the customer service agent access to the field is creating a permission set that allows read-only access to the field via Field Level Security and assigning it to the agent. A permission set is a collection of settings and permissions that give users access to various tools and functions. Field Level Security (FLS) is a setting that controls the access level of fields for different profiles or permission sets. The app builder can create a permission set that grants read-only access to the custom field on the account object via FLS and assign it to the agent. Option B is incorrect because creating a new profile to allow for read-only access to the field via FLS and assigning it to the agent is not recommended, as profiles are used to define the baseline permissions and settings for a group of users, and creating multiple profiles for individual users can be hard to maintain. Option C is incorrect because updating the Customer Service Profile already assigned to the agent to allow for read-only access to the field via FLS is not recommended, as this will affect all users who have the same profile, which may violate the security policy. Option D is incorrect because updating the custom field's FLS in setup to allow the agent read-only access to the field is not possible, as FLS can only be set at the profile or permission set level, not at the user level.
