

# Certification IDP Torrent & IDP Labs

BONUS!!! Download part of TorrentExam IDP dumps for free: [https://drive.google.com/open?id=1tN18Ih7-8ItrkmF-r\\_AKrwTeKqon2NjP](https://drive.google.com/open?id=1tN18Ih7-8ItrkmF-r_AKrwTeKqon2NjP)

As usual, you just need to spend little time can have a good commend of our study materials, then you can attend to your IDP exam and pass it at your first attempt. We also hire a team of experts, and the content of IDP question torrent is all high-quality test guidance materials that have been accepted by experienced professionals. IDP practice materials will be the most professional and dedicated tutor you have ever met.

The data that come up with our customers who have bought our IDP actual exam and provided their scores show that our high pass rate is 98% to 100%. This is hard to find and compare with in the market. And numerous enthusiastic feedbacks from our worthy clients give high praises not only on our IDP study torrent, but also on our sincere and helpful 24 hours customer services on IDP exam questions online. All of these prove that we are the first-class vendor in this career and have authority to ensure your success in your first try on IDP exam.

## Buy TorrentExam CrowdStrike IDP Exam Questions With Free Updates

In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our IDP question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our IDP Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment I am willing to show our IDP guide torrents to you, and I can make a bet that you will be fond of our products if you understand it.

## CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• User Assessment: Examines user attributes, differences between users</li><li>• endpoints</li><li>• entities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom</li><li>• templated</li><li>• scheduled workflows, branching logic, and loops.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>• Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity</li><li>• likelihood</li><li>• consequence factors, risk prioritization, score reduction, and configuring security goals and scopes.</li></ul>
Topic 8	<ul style="list-style-type: none"><li>• Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling</li><li>• disabling rules, applying changes, and required Falcon roles.</li></ul>

## CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q35-Q40):

### NEW QUESTION # 35

Which entity tab will show an administrator how to lower the account's risk score?

- A. Risk
- B. Activity
- C. Timeline
- D. Asset

**Answer: A**

Explanation:

In CrowdStrike Falcon Identity Protection, the Risk tab within a user or account entity provides administrators with direct visibility into why an account has a specific risk score and what actions can be taken to reduce that score. This functionality is a core component of the User Assessment and Risk Assessment sections of the CCIS (CrowdStrike Identity Specialist) curriculum. The Risk tab aggregates both analysis-based risks and detection-based risks, clearly identifying contributing factors such as compromised passwords, excessive privileges, risky authentication behavior, stale or never-used accounts, and policy violations. It also highlights the severity, likelihood, and consequence of each risk factor, allowing administrators to prioritize remediation efforts effectively. Most importantly, this tab provides actionable guidance, enabling teams to understand which specific remediation steps—such as enforcing MFA, resetting credentials, reducing privileges, or disabling unused accounts—will directly lower the account's overall risk score.

Other entity tabs do not provide this capability. The Timeline tab focuses on chronological events and detections, the Activity tab

displays authentication and behavioral activity, and the Asset tab shows associated endpoints and resources. Only the Risk tab is designed to explain risk drivers and guide remediation, making Option D the correct and verified answer.

### NEW QUESTION # 36

Which of the following is NOT a default insight but can be created with a custom insight?

- A. Poorly Protected Accounts with SPN
- B. Using Unmanaged Endpoints
- C. Compromised Password
- D. GPO Exposed Password

**Answer: A**

Explanation:

In Falcon Identity Protection, default insights are prebuilt analytical views provided by CrowdStrike to immediately highlight common and high-impact identity risks across the environment. These default insights are automatically available in the Risk Analysis and Insights areas and are designed to surface well-known identity exposure patterns without requiring customization. Examples of default insights include Using Unmanaged Endpoints, GPO Exposed Password, and Compromised Password. These insights are natively provided because they represent frequent and high-risk identity attack vectors such as credential exposure, unmanaged authentication sources, and password compromise, all of which directly contribute to elevated identity risk scores. Poorly Protected Accounts with SPN (Service Principal Name), however, is not provided as a default insight. While Falcon Identity Protection does collect and analyze SPN-related risk signals—such as Kerberoasting exposure and weak service account protections—this specific grouping must be created by administrators using custom insight filters. Custom insights allow teams to define precise conditions, combine attributes (privilege level, SPN presence, password age, MFA status), and tailor risk visibility to their organization's threat model.

This distinction is emphasized in the CCIS curriculum, which explains that custom insights extend beyond default coverage, enabling deeper, organization-specific identity risk analysis. Therefore, Option D is the correct answer.

### NEW QUESTION # 37

The Enforce section of Identity Protection is used to:

- A. Gain an overview of the domain and indicate whether the domain follows best security practice
- B. Configure domains, appliances, subnets, connectors, risk configuration, and settings
- C. View all identity-based detections and identity-based incidents in the environment
- D. Define policy rules that determine what actions to take in response to certain triggers observed in the environment

**Answer: D**

Explanation:

The Enforce section of Falcon Identity Protection is dedicated to policy-based identity enforcement.

According to the CCIS curriculum, this section allows administrators to define and manage Policy Rules and Policy Groups that specify how the platform should respond when identity-related conditions are detected.

These rules evaluate triggers such as risky authentication behavior, privilege misuse, compromised credentials, or elevated risk scores, and then execute actions like blocking access, enforcing MFA, or initiating Falcon Fusion workflows. Enforce is therefore the execution layer of Falcon's identity security model.

The other options correspond to different sections of the platform:

Configuration tasks are handled in Configure.

Detections and incidents are reviewed in Monitor or Explore.

Domain posture overviews are displayed in Domain Security Overview.

Because Enforce directly controls what actions are taken in response to identity risk, Option B is the correct and verified answer.

### NEW QUESTION # 38

How long does it typically take Falcon Identity to develop a baseline of a user?

- A. Two weeks
- B. One week
- C. One month

- D. Three months

**Answer: B**

Explanation:

Falcon Identity Protection establishes a user baseline by observing authentication behavior over time, including login frequency, endpoints used, access patterns, and protocol usage. According to the CCIS curriculum, Falcon typically requires approximately one week of consistent activity to develop an initial, reliable baseline for a user.

This baseline allows Falcon to distinguish normal behavior from anomalies and to calculate accurate risk scores. While the baseline continues to mature over time and becomes more precise with additional data, the first usable behavioral model is generally formed within a week.

Longer timeframes such as one or three months are not required to begin detecting abnormal behavior.

Conversely, periods shorter than a week may not provide sufficient behavioral data to accurately model normal usage patterns.

Because Falcon can rapidly establish a functional baseline while continuously refining it, Option C (One week) is the correct and verified answer.

### NEW QUESTION # 39

Which section of the Falcon menu is used to investigate the Event Analysis dashboard?

- A. Threat Hunter
- **B. Explore**
- C. Configure
- D. Enforce

**Answer: B**

Explanation:

In Falcon Identity Protection, the Explore section of the Falcon menu is used to investigate analytical views such as the Event Analysis dashboard. This aligns with the CCIS framework, which defines Explore as the primary area for interactive investigation, analytics, and risk exploration across identity data.

The Event Analysis dashboard is designed to help administrators analyze identity-related authentication events, behavioral patterns, and anomalous activity derived from domain traffic inspection and domain controller telemetry. These analytical capabilities are intentionally placed under Explore because this menu category supports hypothesis-driven investigation rather than enforcement or configuration actions.

By contrast:

\* Enforce is used to apply policy rules and automated controls.

\* Threat Hunter is focused on proactive hunting using queries and detection pivots.

\* Configure is used to manage settings, connectors, policies, and integrations.

The CCIS documentation explicitly associates dashboards such as Risk Analysis and Event Analysis with the Explore menu, emphasizing its role in understanding why risk exists before taking action. Therefore, Option C (Explore) is the correct and verified answer.

### NEW QUESTION # 40

.....

Without doubt, our IDP practice dumps keep up with the latest information and contain the most valued key points that will show up in the real IDP exam. Meanwhile, we can give you accurate and instant suggestion for our customer services know every detail of our IDP Exam Questions. And they are pleased to give guide for 24 hours online. You can get assistant by them as long as you made your inquire.
