www.NWExam.com
This Palo Alto CloudSec-Pro study guide is designed to help cloud security professionals prepare effectively for the Palo Alto Networks Cloud Security Professional certification exam. It covers core CloudSec-Pro exam objectives, including cloud threat detection, Cortex Cloud capabilities, workload security, AI security posture management, investigation workflows, and incident response best practices. With structured content and practice-focused guidance, this guide helps candidates understand real-world cloud security scenarios, improve exam readiness, and build practical skills required to pass the CloudSec-Pro certification confidently.

Professional guidance is indispensable for a candidate. As a leader in the field, our CloudSec-Pro learning prep has owned more than ten years' development experience. Thousands of candidates have become excellent talents after obtaining the CloudSec-Pro certificate. If you want to survive in the exam, our CloudSec-Pro actual test guide is the best selection. Firstly, our study materials can aid you study, review and improvement of all the knowledge. In addition, you do not need to purchase other reference books. Our CloudSec-Pro Exam Questions are able to solve all your problems of preparing the exam. Of course, our study materials are able to shorten your learning time. You will have more spare time to do other things. And we can ensure you to pass the CloudSec-Pro exam.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI• ML and threat intelligence support incident response, categorization, and prioritization.
Topic 2	<ul style="list-style-type: none">• Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.

Topic 3	<ul style="list-style-type: none"> • Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.
Topic 4	<ul style="list-style-type: none"> • Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 5	<ul style="list-style-type: none"> • Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI • CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.

As long as you have a will, you still have the chance to change. Once you are determined to learn our CloudSec-Pro study materials, you will become positive and take your life seriously. Through the preparation of the CloudSec-Pro exam, you will study much practical knowledge. Of course, passing the exam and get the CloudSec-Pro certificate is just a piece of cake. With the high pass rate of our CloudSec-Pro practice braindumps as 98% to 100%, i can say that your success is guaranteed.

Palo Alto Networks Cloud Security Professional Sample Questions (Q105-Q110):

NEW QUESTION # 105

Given the following JSON query:

```
$.resource[*].aws_s3_bucket exists
```

Which tab is the correct place to add the JSON query when creating a Config policy?

- A. Remediation
- B. Build Your Rule (Run tab)
- C. Details
- **D. Build Your Rule (Build tab)**
- E. Compliance Standards

Answer: D

Explanation:

When creating a Config policy in Prisma Cloud and incorporating a JSON query, the correct place to add this query is under the "Build Your Rule (Build tab)" (Option E). This section allows users to define the criteria and conditions for the policy, including specifying JSON or RQL (Resource Query Language) queries that articulate the policy's logic. The "Details" (Option A) tab is typically used for general information about the policy, such as its name and description. The "Compliance Standards" (Option B) tab is for associating the policy with specific compliance frameworks. The "Remediation" (Option C) tab provides guidance on how to remediate any issues detected by the policy. The "Build Your Rule (Run tab)" (Option D) is not a standard option in Prisma Cloud policy configuration.

NEW QUESTION # 106

In Azure, what permissions need to be added to Management Groups to allow Prisma Cloud to calculate net effective permissions?

- A. PaloAltoNetworks.PrismaCloud/managementGroups/descendants/read
- **B. Microsoft.Management/managementGroups/descendants/read**
- C. Microsoft.Management/managementGroups/descendants/calculate

- D. PaloAltoNetworks.PrismaCloud/managementGroups/

Answer: B

Explanation:

In Azure, to enable Prisma Cloud to calculate net effective permissions across Management Groups, the necessary permission is "Microsoft.Management/managementGroups/descendants/read." This permission grants Prisma Cloud the ability to read the management group hierarchy and the related details, allowing for a comprehensive analysis of the effective permissions applied across different levels of the management group structure. By having this level of access, Prisma Cloud can accurately assess and report on the permissions assigned to various resources and identities within the Azure environment, facilitating better security and compliance management.

NEW QUESTION # 107

Which three types of buckets exposure are available in the Data Security module? (Choose three.)

- A. Private
- B. International
- C. Conditional
- D. Public
- E. Differential

Answer: A,C,D

Explanation:

In the Data Security module of cloud security platforms like Prisma Cloud, the types of bucket exposures typically include Public (option A), Private (option B), and Conditional (option E). Public buckets are accessible by anyone on the internet, posing a significant data leakage risk. Private buckets are restricted to authorized users only, offering a higher level of security. Conditional exposure involves buckets that may be accessible under certain conditions or to specific users, requiring careful configuration and policy enforcement to prevent unauthorized access. International (option C) and Differential (option D) do not represent standard types of bucket exposures in cloud security contexts.

NEW QUESTION # 108

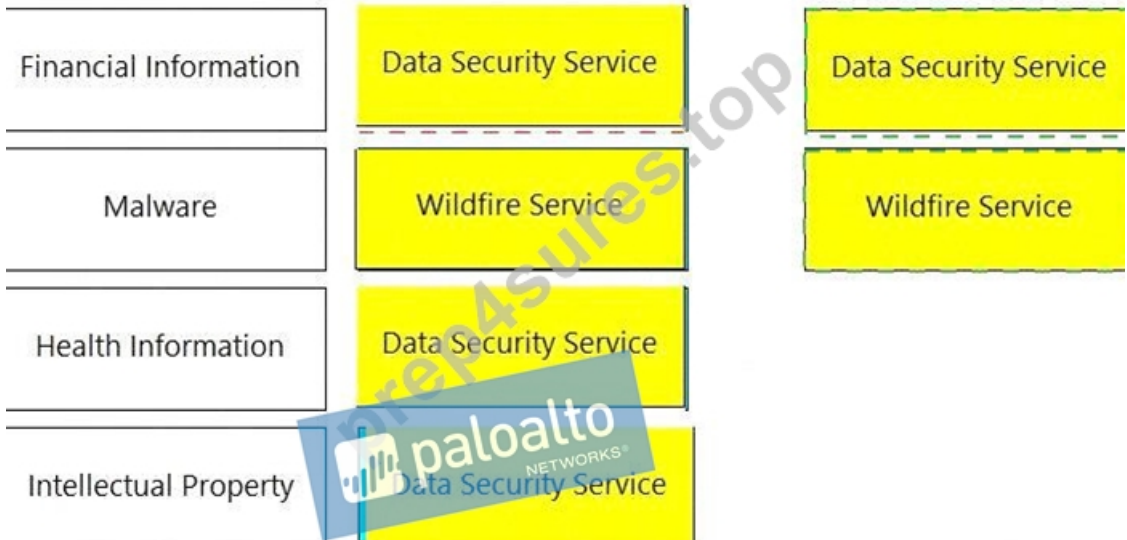

Match the service on the right that evaluates each exposure type on the left.

NEW QUESTION # 109

What factor is not used in calculating the net effective permissions for a resource in AWS?

- A. IPTables firewall rule
- B. AWS service control policies (SCPs)
- C. AWS IAM policy
- D. Permission boundaries

Answer: A

Explanation:

In the context of calculating net effective permissions for a resource in AWS, IPTables firewall rule is not used. Net effective permissions in AWS are determined by evaluating various AWS-specific mechanisms such as IAM policies, permission boundaries, and service control policies (SCPs). IAM policies define what actions are allowed or denied for various AWS resources. Permission boundaries provide a way to delegate administration for IAM entities, setting the maximum permissions that an IAM entity can have. SCPs are part of AWS Organizations and allow for central control over the maximum available permissions for all accounts within an organization. IPTables, on the other hand, is a Linux-based application for setting up firewall rules on individual hosts and is not directly related to AWS resource permissions. Therefore, IPTables firewall rules are not considered when calculating net effective permissions in AWS, making option C the correct answer.
