Free PDF Quiz High Pass-Rate CheckPoint - 156-215.82 Free Exam

Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then Check Point Certified Security Administrator - R82 exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with 156-215.82 Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails.

CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q37-Q42):

NEW QUESTION # 37

Fill in the blanks: Default port numbers for an LDAP server is _____ for standard connections and _____ SSL connections.

- A. 636, 290
- B. 290, 675
- C. 389, 636
- D. 675, 389

Answer: C

Explanation:

The default port numbers for an LDAP server are 389 for standard connections and 636 for SSL connections. LDAP (Lightweight Directory Access Protocol) is a protocol that allows access to directory services over TCP/IP. Therefore, the correct answer is B. 389, 636.

NEW QUESTION # 38

Stateful Inspection compiles and registers connections where?

- A. State Cache
- B. Connection Cache
- C. Network Table
- D. State Table

Answer: D

Explanation:

Stateful Inspection compiles and registers connections in the State Table. The State Table is a database that stores information about active connections and sessions on the Security Gateway. The other options are not valid names for the database that stores connection information.

NEW QUESTION # 39

Which is NOT an encryption algorithm that can be used in an IPSEC Security Association (Phase 2)?

- A. AES-GCM-128
- B. AES-CBC-256
- C. AES-GCM-256

Answer: B

Explanation:

The answer is B because AES-CBC-256 is not a supported encryption algorithm for IPsec Security Associations (Phase 2) in R81. The supported encryption algorithms are AES-GCM-128, AES-GCM-256, AES-CBC-128, 3DES, and NULL3. Check Point R81 VPN Administration Guide

NEW QUESTION # 40

When a Security Gateway sends its logs to an IP address other than its own, which deployment option is installed?

- A. Bridge Mode
- B. Standalone
- C. Distributed
- D. Targeted

Answer: C

Explanation:

When a Security Gateway sends its logs to an IP address other than its own, it means that the deployment option is distributed. In a distributed deployment, the Security Management Server and the Security Gateway are installed on separate machines. The Security Management Server collects logs from one or more Security Gateways and manages them centrally. In a standalone deployment, the

Security Management Server and the Security Gateway are installed on the same machine. The Security Gateway sends logs to its own IP address. In a bridge mode deployment, the Security Gateway acts as a transparent bridge between two network segments and does not have an IP address of its own. In a targeted deployment, the Security Gateway sends logs to a specific log server that is configured in the gateway object properties.

NEW QUESTION # 41

Fill in the blank: Back up and restores can be accomplished through _____.

- A. CLI, SmartUpdate, or SmartBackup
- B. SmartUpdate, SmartBackup, or SmartConsole
- C. WebUI, CLI, or SmartUpdate
- D. SmartConsole, WebUI, or CLI

Answer: D

Explanation:

Back up and restores can be accomplished through SmartConsole, WebUI, or CLI. These are the methods to perform system backup and restore, which save and restore the Gaia OS configuration and the Security Management Server database. WebUI, CLI, or SmartUpdate are not valid methods, as SmartUpdate is used to install software packages and patches, not to back up or restore the system. CLI, SmartUpdate, or SmartBackup are not valid methods, as SmartBackup is a feature of SmartProvisioning that allows backing up and restoring the configuration of Security Gateways and VSX clusters. SmartUpdate, SmartBackup, or SmartConsole are not valid methods, as SmartConsole is used to configure and manage the Security Policy, not to back up or restore the system.

NEW QUESTION # 42
