Ich habe Vertrauen in unsere Produkte. Wenn Sie die Produkte von ZertFragen kaufen, wird ZertFragen Ihnen helfen, die Splunk SPLK-3002 Zertifizierungsprüfung einmalig zu bestehen. Sonst erstatteteten wir Ihnen gesammte Einkaufgebühren.

Splunk IT Service Intelligence Certified Admin SPLK-3002 Prüfungsfragen mit Lösungen (Q27-Q32):

27. Frage

Which of the following is a recommended best practice for service and glass table design?

- A. Design glass tables first to discover which KPIs are important.
- B. Start with base searches, then services, and then glass tables.
- **C. Plan and implement services first, then build detailed glass tables.**
- D. Always use the standard icons for glass table widgets to improve portability.

Antwort: C

Begründung:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/GTOverview> A is the correct answer because it is recommended to plan and implement services first, then build detailed glass tables that reflect the service hierarchy and dependencies. This way, you can ensure that your glass tables provide accurate and meaningful service-level insights. Building glass tables first might lead to unnecessary or irrelevant KPIs that do not align with your service goals. References: Splunk IT Service Intelligence Service Design Best Practices

28. Frage

What is the main purpose of the service analyzer?

- A. Monitor overall Service and KPI status.
- **B. Allow Analysts to add comments to Alerts.**
- C. Display a list of All Services and Entities.
- D. Trigger external alerts based on threshold violations.

Antwort: B

29. Frage

When in maintenance mode, which of the following is accurate?

- A. Service health scores and KPI events are deleted until the window is over.
- B. Maintenance mode slots are scheduled on a per hour basis.
- C. KPIs are shown in blue while in maintenance mode.
- **D. Once the window is over, KPIs and notable events will begin to be generated again.**

Antwort: D

30. Frage

Which of the following describes a way to delete multiple duplicate entities in ITSI?

- **A. All of the above.**
- B. Via a search using the | deleteentity command.
- C. Via the entity lister page.
- D. Via a CSV upload.

Antwort: A

Begründung:

D is the correct answer because ITSI provides multiple ways to delete multiple duplicate entities. You can use a CSV upload to overwrite existing entities with new or updated information, or delete them by setting the action field to delete. You can also use the entity lister page to select multiple entities and delete them in bulk.

Alternatively, you can use a search command called | deleteentity to delete entities that match certain criteria.

References: Create and update entities using a CSV file in ITSI, Delete entities in bulk in ITSI, Delete entities using the | deleteentity command in ITSI

31. Frage

Which of the following describes entities? (Choose all that apply.)

- A. Entities must be IT devices, such as routers and switches, and must be identified by either IP value, host name, or mac address.
- **B. An abstract (pseudo/logical) entity can be used to split by for a KPI, although no entity rules or filtering can be used to limit data to a specific service.**
- **C. To automatically restrict the KPI to only the entities in a particular service, select "Filter to Entities in Service".**
- D. Multiple entities can share the same alias value, but must have different role values.

Antwort: B,C

Begründung:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/KPIfilter> Entities are IT components that require management to deliver an IT service. Each entity has specific attributes and relationships to other IT processes that uniquely identify it. Entities contain alias fields and informational fields that ITSI associates with indexed events. Some statements that describe entities are:

B). An abstract (pseudo/logical) entity can be used to split by for a KPI, although no entity rules or filtering can be used to limit data to a specific service. An abstract entity is an entity that does not represent a physical host or device, but rather a logical grouping of data sources. For example, you can create an abstract entity for each business unit in your organization and use it to split by for a KPI that measures revenue or customer satisfaction. However, you cannot use entity rules or filtering to limit data to a specific service based on abstract entities, because they do not have alias fields that match indexed events.

D). To automatically restrict the KPI to only the entities in a particular service, select "Filter to Entities in Service". This option allows you to filter the data sources for a KPI by the entities that are assigned to the service. For example, if you have a service for web servers and you want to monitor the CPU load percent for each web server entity, you can select this option to ensure that only the events from those entities are used for the KPI calculation.
