

# PDII考試題庫 & PDII指南

| Salesforce PDII |                                                                                                                                                                                                |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 問題 1            | • Apex code of trigger that is not performing as expected<br>• Identify the cases for different types of custom metadata and custom settings                                                   |
| 問題 2            | • Identify how an apex method can be made available for use by Lightning Web Components<br>• Determine if a declarative or custom coded solution should be implemented                         |
| 問題 3            | • Identify the appropriate dynamic apex feature to use in the solution<br>• Given a scenario, describe and justify the custom programming or declarative solution                              |
| 問題 4            | • Describe the messaging techniques and best practices when dispatching events in user interfaces<br>• Differentiate DML, statements and types of database events                              |
| 問題 5            | • Describe the purpose and benefits of static resources in both Visualforce and Lightning Components<br>• Identify why secure apex managed classes should be used                              |
| 問題 6            | • Given a set of requirements, choose the appropriate integration technique<br>• Given a scenario, formulate the deployment process, deployment tool, and deployment                           |
| 問題 7            | • Compare and contrast the usage of Visualforce and Apex controllers<br>• Describe the use cases for and benefits of external TOS                                                              |
| 問題 8            | • Select scenarios where code review is applicable and how the review should be implemented<br>• Describe the Apex features available for error handling and maintaining transaction integrity |
| 問題 9            | • Identify multi-tenancy and discuss the ability to resolve them<br>• Identify the considerations of interrelationships between multiple processes                                             |

**最新的 Salesforce Developers PDII 免費考試真題 (Q19-Q24):**

**問題 19**  
A developer must perform a complex SOQL query that joins two objects in a Lightning component. How can the Lightning component execute the query?

- A. Write the query in a custom Lightning web component wrapper and derive from the Lightning component.
- B. Create a Process Builder to execute the query and derive from the Lightning component.
- C. Include an Apex class with the method annotated as @AuraEnabled to perform the query.
- D. Use the Salesforce Streaming API to perform the SOQL query.

**問題 20**  
Universal Containers needs to integrate with an external system. The external system is initiated when a record is created in Salesforce. The external system does not require Salesforce to send for a response before continuing. What should the developer use to accomplish this?

- A. Trigger with HTTP action
- B. Platform event
- C. Outbound message

## 最新的PDII考試題庫和資格考試中的領先材料供應商和無與倫比的Salesforce Platform Developer II

選擇使用Fast2test提供的產品，你踏上了IT行業巔峰的第一步，離你的夢想更近了一步。Fast2test為你提供的測試資料不僅能幫你通過Salesforce PDII認證考試和鞏固你的專業知識，而且還能給你你提供一年的免費更新服務。

## 最新的 Salesforce Developers PDII 免費考試真題 (Q134-Q139):

### 問題 #134

Business rules require a Contact to always be created when a new Account is created.

What can be used when developing a custom screen to ensure an Account is not created if the creation of the Contact fails?

- A. Use `setSavePoint()` and `rollback()` with a try/catch block.
- B. Use the Database.Insert method with `allOrNone` set to False.
- C. Disable Validation rules on Contacts and set default values with a Trigger.
- D. Use the Database.Delete method if the Contact insertion fails.

答案: A

解題說明:

Explanation

### 問題 #135

A developer created a Lightning web component for the Account record page that displays the five most recently contacted Contacts for an Account. The Apex method, `Contacts`, returns a list of Contacts and will be wired to a property in the component.

```
01:
02: public class ContactFetcher {
03:
04:     static List<Contact> getRecentContacts(Id accountId) {
05:         List<Contact> contacts = getFiveMostRecent(accountId);
06:         return contacts;
07:     }
08:
09:     private static List<Contact> getFiveMostRecent(Id accountId) {
10:         //...implementation...
11:     }
12: }
```

Which two lines must change in the above code to make the Apex method able to be wired?

Choose 2 answers

- A. Add `public` to line 04.
- B. Remove `private` from line 09.
- C. Add `@AuraEnabled(cacheable=true)` to line 08.
- D. Add `@AuraEnabled(cacheable=true)` to line 03.

答案: A,D

解題說明:

To make the Apex method able to be wired, the developer should change two lines in the code: add `public` to line 04, and add `@AuraEnabled(cacheable=true)` to line 03. Adding `public` to line 04 makes the Apex method accessible from outside the class, which is required for the `@wire` decorator to invoke the method. Adding `@AuraEnabled(cacheable=true)` to line 03 makes the Apex method cacheable, which means that the method can be invoked by a Lightning web component that uses the `@wire` decorator. This also improves the performance of the component, as it reduces the number of server trips and leverages the client-side cache. The developer should use this annotation for methods that return data that does not change frequently or does not depend on the user context. Adding `@AuraEnabled(cacheable=true)` to line 08 is not necessary, as the `cacheable` attribute only applies to the top-level method that is invoked by the `@wire` decorator, not to the helper methods that are called within the class. Removing `private` from line 09 is not necessary, as the helper method can be `private` as long as it is called from within the class. Reference: [Call Apex Methods from Lightning Web Components], [Marking Methods as Storable or Cacheable]

### 問題 #136

The Contact object in an org is configured with workflow rules that trigger field updates. The fields are not updating, even though the end user expects them to. The developer creates a debug log to troubleshoot the problem.

What should the developer specify in the debug log to see the values of the workflow rule conditions and debug the problem?

- A. ERROR level for the Database log category
- B. INFO level for the Workflow log category
- C. INFO level for the Database log category
- D. ERROR level for the Workflow log category

答案： C

#### 問題 #137

Consider the following code snippet:

```
trigger AccountTrigger on Account (after insert) {
    for(Account thisAccount : Trigger.new){
        AccountHandler.createRelatedOpportunity(thisAccount);
    }
}

public class AccountHandler{
    public static void createRelatedOpportunity(Account thisAccount){
        Pricing_Structure__c ps = (Select Type__c FROM Pricing_Structure__c WHERE Industry__c = :thisAccount.Industry
        LIMIT 1);
        Opportunity newOpp = new Opportunity(Name = thisAccount.Id,
        Name = thisAccount.Name+' - Base
        CloseDate = System.Today()+30,
        StageName = 'Prospecting',
        Pricing_Structure__c =
        ps.Type__c);
        insert newOpp;
    }
}
```

Which governor limit is likely to be exceeded when the trigger runs when a scope of 200 newly inserted accounts?

- A. Total number of SOQL queries issued
- B. Total number of DML statements issued
- C. Total number of records processed as a result of DML
- D. Total number of SOQL queries issued

答案： B

#### 問題 #138

What is the transaction limit on the number of "sendEmail" method calls?

- A. 0
- B. 1
- C. 2
- D. There is no limit
- E. 3

答案： A

解題說明：

Explanation

Explanation:

The reserveEmailCapacity methods let you declare how many emails you want to send prior to actually sending, allowing you to handle limit errors prematurely

#### 問題 #139

.....

在IT領域工作的你，肯定想通過IT認證考試來證明自己的能力吧？而且，擁有IT認證資格的同事和朋友也愈來愈多了吧。在這種情況下，如果一個資格都沒有就趕不上別人了。那麼，你決定參加哪個考試呢？Salesforce的考試
