VMware Cloud Management and Automation Advanced Design Sample Questions (Q179-Q184):

NEW QUESTION # 179

An IaaS Administrator has been tasked with organizing virtualization compute resources and cloud endpoints into fabric groups by type and intent. One or more fabric administrators will manage the resources in each fabric group. Which are three considerations to take into account when designing the fabric groups? (Choose three.)

- A. Fabric administrators may submit requests on behalf of other users. These users could be a member of more than one

group and have different roles in different groups.

- B. Fabric administrators are responsible for creating reservations on the compute resources in their fabric groups to allocate fabric to specific business groups.
- C. Fabric groups will be created in a specific tenant, but their resources could be made available to users who belong to business groups in all tenants.
- D. Fabric administrators monitor the resource use for their group(s) and often are approvers for catalog requests.
- E. The IaaS administrator must grant the role of fabric administrator to the appropriate users.

Answer: B,C,E

NEW QUESTION # 180

A security team has requested a review of regulatory compliance across their private cloud infrastructure from its company's cloud architect.

Which Cloud Management product should the architect recommend to accomplish this?

- A. VMware Aria Operations for Logs
- B. VMware Aria Operations
- C. VMware Aria Operations for Applications
- D. VMware Aria Operations for Networks

Answer: B

Explanation:

VMware Aria Operations provides regulatory compliance assessment and reporting for private cloud infrastructure by evaluating configurations, policies, and system health against compliance standards, making it the appropriate tool for this requirement.

NEW QUESTION # 181

Which of the following is an example of an availability concern in system design?

- A. Ensuring the system can handle a sudden surge in user traffic.
- B. Applying role-based access controls for user authentication.
- C. Encrypting sensitive data during transmission.
- D. Implementing regular data backups to prevent data loss.

Answer: A

NEW QUESTION # 182

During requirements gathering for an organization's private cloud on a single machine catalog, the following requirements were identified: A user should be able to select a data center location which is mapped to a custom resource by the fabric administrator. A Guest VM custom hostname format should be based on the first two letters of the data center location.

A generated VM custom hostname format should be displayed as a drop-down in the catalog request page using a vRealize Automation (vRA) custom property backed by external vRealize Orchestrator (vRO) action.

Which design recommendation would best address these requirements?

- A. No new custom property is required since the fabric administrator has already mapped datacenter locations to the correct compute resources. Map the built-in "_vm.DataCenter.Location" custom property as an input to the required vRO action.
- B. Define a custom property "_vm.DataCenter.Location" with static datacenter values, assign it to the blueprint with the "Show in the request" check box selected and map it as an input to the required vRO action.
- C. Define a custom property "Vrm.DataCenter.Location" with static datacenter values, assign it to the blueprint with the "Show in the request" check box selected and map it as an input to the required vRO action.
- D. Enable "Display location on request" in the blueprint's VM machine type, map the built-in "Vrm.DataCenter.Location" custom property as an input to the required vRO action.

Answer: D

NEW QUESTION # 183

A Cloud Management solution will need to make extensive use of custom integrations. The platform owner is concerned that a lot of time might be needed to troubleshoot failures of these integrations.

Which Cloud Management component could be included in the solution to assist troubleshooting efforts?

- **A. VMware Aria Operations for Logs**
- B. VMware Aria Operations
- C. VMware Aria Operations for Networks
- D. VMware Aria Suite Lifecycle

Answer: A

Explanation:

VMware Aria Operations for Logs provides centralized log aggregation, search, and analysis, making it easier to troubleshoot custom integrations by allowing rapid identification and investigation of errors and failures across the Cloud Management platform.
