## Useful New Plat-Admn-301 Test Dumps for Real Exam

There are three versions of our Plat-Admn-301 learning engine which can allow all kinds of our customers to use conveniently in different situations. They are the PDF, Software and APP online versions. I specially recommend the APP online version of our Plat-Admn-301 Exam Dumps. With the online app version of our Plat-Admn-301 actual exam, you can just feel free to practice the questions in our Plat-Admn-301 training materials on all kinds of electronic devices, such as IPAD, telephone, computer and so on!

## Salesforce Certified Platform Administrator II Sample Questions (Q144-Q149):

### NEW QUESTION # 144

DreamHouse Realty (DR) wants to ensure that its data is protected. There have been several recent attempts to phish employees. What should DR do to help ensure that the user that is logged in is the right user when the running user is trying to view reports and

dashboards?

- A. Set up an authentication provider for reports and dashboards.
- **B. Require a high assurance session when exporting or printing reports and dashboards.**
- C. Require a Username, Password, and Security Token when logging in.
- D. Require MFA when users need to view and export dashboards and reports.

**Answer: B**

Explanation:

To help ensure that users who are viewing reports and dashboards are who they say they are, DR should require a high assurance session when exporting or printing reports and dashboards. A high assurance session requires users to verify their identity using multi-factor authentication before accessing sensitive data or functionality in Salesforce. References:

#### **NEW QUESTION # 145**

The sales agents at DreamHouse Realty have a profile that allows them to import records for a custom object called House. The agents only need to make imports occasionally and typically Import around 100 new records at a time.

What tool should the agents use to upload records?

- A. Data Loader
- **B. Date Import Wizard**
- C. Apex
- D. Bulk API

**Answer: B**

Explanation:

Data Import Wizard is a tool that allows administrators to import data for standard and custom objects in Salesforce using CSV files. Data Import Wizard can handle up to 50,000 records at a time and supports simple data transformations and validations. Data Import Wizard can be used to upload records for a custom object when the number of records is small and the import frequency is low.

#### **NEW QUESTION # 146**

AW Computing has several service plans it offers with its laptops. Management wants the sales team to focus on bringing in new business and to have the creation of the renewal opportunity for the service plans happen automatically.

What approach should the administrator take to automate the renewal process?

- A. Configure a time-based workflow to send an email reminder to the sales rep when the service plan expires.
- B. Create a validation rule to prevent the rep from closing the opportunity until a renewal is associated.
- **C. Configure a flow that will create the renewal based on the closed-won date and opportunity line items.**
- D. Create a dynamic Lightning page with rich text to remind the rep to create a renewal opportunity when the opportunity is closed won.

**Answer: C**

Explanation:

To automate the renewal process for service plans, AW Computing should configure a flow that will create the renewal based on the closed-won date and opportunity line items. A flow is a tool that can automate complex business processes by executing logic, interacting with Salesforce database, calling Apex classes, and guiding users through screens. A flow can be triggered by various events, such as when an opportunity is closed won. References: [https://help.salesforce.com/s/articleView?id=sf\\_flow\\_overview.htm&type=5](https://help.salesforce.com/s/articleView?id=sf_flow_overview.htm&type=5)

#### **NEW QUESTION # 147**

AW Computing is conducting an audit and wants to understand how many objects have been shared as public externally. Which tool should the administrator use to quickly obtain this details?

- A. Setup Audit Trail
- B. Session Security Settings
- C. Object Manager
- D. **Security Health Check**

**Answer: D**

Explanation:

The Security Health Check tool in Salesforce provides a detailed overview of an organization's security posture, which includes information on how objects are shared externally. This tool is particularly useful for administrators who need to review and assess various security configurations, including the visibility of objects to external users.

\* Security Health Check:

\* This tool helps administrators quickly identify and manage risks related to security settings, including those pertaining to data sharing externally.

\* By using Health Check, administrators can access a report that shows the sharing settings of objects, allowing them to confirm if any objects have been shared as "Public" externally, which is crucial during an audit.

\* It provides insights into high-risk settings and areas where the configuration does not align with Salesforce security best practices, such as public access levels.

\* Use Case:

\* For an audit focused on understanding external access to objects, Security Health Check is the most appropriate choice because it gives a quick snapshot of how data sharing settings compare against Salesforce's recommended security baseline.

\* This can help AW Computing immediately identify which objects have broader public access than desired, addressing potential security vulnerabilities.

Incorrect options:

\* Setup Audit Trail: This tool tracks configuration changes within Salesforce over time, but it does not provide specific details about data sharing settings or external visibility of objects.

\* Session Security Settings: These settings control session policies and timeouts but are not related to object sharing or external visibility.

\* Object Manager: While Object Manager allows administrators to configure object-specific settings, it does not provide an overall view or quick audit of external sharing configurations.

Reference: Salesforce documentation highlights that the Security Health Check tool is designed for comprehensive security assessments, including the review of public data exposure and external sharing settings.

**NEW QUESTION # 148**

Cloud Kicks has created a new flow that deletes records.

What should the administrator consider when testing the flow?

- A. Flows with delete elements cannot be debugged by the Flow debugged tool.
- **B. Even if the flow is inactive, debugging the flow will delete the test record.**
- C. Flow with delete elements need to be inactive to ensure that the test record is not actually deleted.
- D. Record deleted by Flow when debugging are hard deleted.

**Answer: B**

Explanation:

Debugging a flow allows administrators to test how a flow behaves before activating it or making changes to it. Debugging a flow runs it in real time using test data provided by the administrator or default values from the flow. However, debugging a flow also performs any actions defined in the flow, such as creating, updating, or deleting records. Therefore, if a flow has a delete element that deletes a record based on certain criteria, debugging the flow will delete the test record even if the flow is inactive. References: [https://help.salesforce.com/s/articleView?id=sf.flow\\_debug.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.flow_debug.htm&type=5)

**NEW QUESTION # 149**

.....
