## Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Campus Fabric IP Clos is known for which of the following features?

- A. Limited scalability
- **B. Simplified topology management**
- C. High latency
- D. Complex configuration

**Answer: B**

### NEW QUESTION # 19

In an EVPN-VXLAN deployment, what is the significance of route distinguishers and route targets?

- A. Route targets are used for physical network design
- B. They are optional components that can be omitted for small deployments
- C. They both serve the same function in route separation
- **D. Route distinguishers are used for route separation, while route targets define VPN membership**

**Answer: D**

### NEW QUESTION # 20

You receive a Marvis Action that reports "Port negotiation mismatch detected on EX3400-48P." In this scenario, which two steps should you take to resolve the issue? (Choose two.)

- **A. Verify that both switch ports are set to auto-negotiate speed and duplex.**
- **B. Check that the connected device supports 802.3 autonegotiation.**
- C. Force the connected device port to half-duplex mode.
- D. Replace the switch uplink SFP module.

**Answer: A,B**

Explanation:

A port negotiation mismatch occurs when the local and remote interfaces fail to agree on common speed or duplex settings.

Marvis Wired Assurance automatically detects this by analyzing telemetry from the switch's physical interfaces.

You can resolve this by ensuring auto-negotiation is enabled on both ends (A) and verifying the peer device supports the 802.3 autonegotiation standard (D).

Manually forcing half-duplex or replacing hardware is unnecessary unless the hardware is faulty.

"Marvis Wired Actions correlate interface negotiation errors with LLDP neighbor data to pinpoint mismatched configurations, helping administrators quickly verify speed/duplex compatibility and 802.3 autonegotiation support." References:

### NEW QUESTION # 21

Referring to the exhibit, what is the purpose of the Save button in the upper-right corner of the Mist dashboard?

- A. It previews the impact of the port configuration changes before applying them.
- B. It resets the port configuration to its default settings.
- **C. It applies the port configuration changes to the switch.**

- D. It generates a backup of the current port configuration.

**Answer: C**

Explanation:

In the Juniper Mist AI for Wired dashboard, administrators can select one or more switch ports (as shown in the exhibit, e.g., port ge-0/0/25 on an EX4100-48MP). Once configuration changes are made - such as VLAN assignment, port profiles, PoE settings, or administrative state - the Save button must be clicked to confirm and apply those changes to the device.

"When making configuration changes in the Mist switch interface, the Save button must be used to confirm the modifications.

Clicking Save applies the selected port settings to the switch through Mist Cloud." Option A is incorrect: saving does not create a backup. Backups and snapshots are handled through Mist's configuration archive, not via the Save button.

Option B is incorrect: Save does not reset configuration; instead, it commits changes.

Option C is incorrect: there is no preview function tied to Save.

Option D is correct: the Save button is explicitly for applying configuration changes to the selected switch or port(s).

## NEW QUESTION # 22

Which two statements are correct about deploying an EVPN-VXLAN fabric in a campus? (Choose two.)

- A. It is a Juniper Networks proprietary solution.
- B. It increases physical bandwidth.
- C. It increases the scalability beyond traditional VLAN limitations.
- D. It simplifies Layer 2 network management.

**Answer: C,D**
