The Salesforce Platform App Builder certification provides professionals with the necessary skills and knowledge to design and implement custom applications on the Salesforce platform. Salesforce Certified Platform App Builder certification validates that the candidate is proficient in creating custom applications, managing data, and integrating with other applications.

Salesforce Certified Platform App Builder Sample Questions (Q169-Q174):

NEW QUESTION # 169

Cloud Kicks (CK) wants to simultaneously delete a Supplier's record and all Supplier Item__c records if a partnership ends with a supplier.

What solution could an app builder use to meet the requirement?

- A. Hierarchical
- **B. Master-detail**
- C. Many-to-many
- D. Indirect lookup

Answer: B

Explanation:

Explanation

The solution that an app builder should use to meet this requirement is master-detail relationship. A master-detail relationship is a type of relationship that creates a parent-child relationship between two objects, where the child records inherit the sharing and security settings of their parent record. The app builder can create a master-detail relationship between Supplier__c and SupplierItem__c objects, where Supplier__c is the parent object and SupplierItem__c is the child object. This way, when a Supplier__c record is deleted, all related SupplierItem__c records are also deleted automatically. Option A is incorrect because many-to-many relationship is not suitable for this requirement, as many-to-many relationship allows two objects to be linked in both directions through a junction object, but does not support cascading delete. Option B is incorrect because indirect lookup relationship is not suitable for this requirement, as indirect lookup relationship allows an external object to link with another object using an external ID field, but does not support cascading delete.

Option C is incorrect because hierarchical relationship is not suitable for this requirement, as hierarchical relationship allows users to use a lookup field that links an object with itself, but does not support cascading delete.

NEW QUESTION # 170

Universal Containers generates leads from three different sources: web, trade shows, and partners. Some of the information collected is applicable to all sources, there is also information that is unique to each type of lead. What should an app builder configure to meet these requirements?

- **A. Create three lead record types each with its own page layout containing the relevant fields**
- B. Create a partner community and a record type for web and trade show leads
- C. Create custom page payouts for each type of lead only containing the relevant fields
- D. Create three sections on the lead layout and instruct users to collapse the non-relevant fields

Answer: A

NEW QUESTION # 171

Universal Containers deployed an app in a large change set from a Developer Sandbox to a Developer Pro Sandbox used for testing. After testing, changes had to be made to several of the components in the change set.

How should an app builder move the new changes to the Developer Pro Sandbox?

- **A. Update the change set and re_display**
- B. Rename the change set, add the changes and re_display
- C. Clone the change set and re_display
- D. Refresh the text sandbox and re_display the change set.

Answer: A

Explanation:

Updating the existing change set with the new changes and redeploying is the most efficient way to move the updated components to the Developer Pro Sandbox.

NEW QUESTION # 172

The previous administrator of Cloud Kicks' (CK) Salesforce Organization used text as the field type when creating new custom fields. CK's current roadmap requires a project that will clean this up during the Lightning migration.

Which three field types should be considered to keep better track of contact information in fields?

Choose 3 answers

- A. Email
- B. Phone
- C. Number
- D. Date
- E. Time

Answer: A,B,C

NEW QUESTION # 173

Universal containers require different fields to be filled out at each stage of the opportunity sales process what configuration steps can an app builder use to meet this requirement?

- A. Set page layout required fields based on the current stage
- B. Create a process builder to prompt the user for field information
- C. Add the path component to the lightning record page

Answer: B
