Chrome-Enterprise-Administrator certification is more and more important for this area, but the exam is not easy for many candidates. Our Chrome-Enterprise-Administrator practice materials make it easier to prepare exam with a variety of high quality functions. Their quality function is observably clear once you download them. We have three kinds of Chrome-Enterprise-Administrator practice materials moderately priced for your reference. All these three types of Chrome-Enterprise-Administrator practice materials win great support around the world and all popular according to their availability of goods, prices and other term you can think of. Just come and buy them!

Maybe you still have doubts about our Chrome-Enterprise-Administrator study materials. You can browser our official websites. We have designed a specific module to explain various common questions such as installation, passing rate and so on. If you still have other questions about our Chrome-Enterprise-Administrator Exam Questions, you can contact us directly via email or online, and we will help you in the first time with our kind and professional suggestions. All in all, our Chrome-Enterprise-Administrator training braindumps will never let you down.

TestkingPDF Make its Google Chrome-Enterprise-Administrator Exam Questions Engaging

Online test version is the best choice for IT person who want to feel the atmosphere of Google real exam. And you can practice latest Chrome-Enterprise-Administrator exam questions on any electronic equipment without any limit. Besides, there is no need to install any security software because our Chrome-Enterprise-Administrator Vce File is safe, you just need to click the file and enter into your password.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

An organization relies heavily on Chrome browser for daily operations News breaks about two critical hardware vulnerabilities These vulnerabilities allow attackers to potentially access sensitive information stored in the browser's memory, even across different websites and processes Which specific Chrome Enterprise Core policy would an administrator implement to help mitigate the risks?

- A. Manage Cross-Origin Extensions by Blocking all except an allowlist
- **B. Enable Site isolation for every website**
- C. Require Hardware-backed Key Generation for TLS

- D. Update Chrome browser to the latest stable version

Answer: B

Explanation:

The scenario describes vulnerabilities that could allow cross-site data leakage within the browser's memory.

"Site isolation for every website" is a security feature in Chrome that isolates the rendering process for each website, preventing one site from accessing the data of another, even if a vulnerability is exploited. This policy directly addresses the risk of cross-site information leakage due to memory vulnerabilities. Option A relates to TLS security, option B is a general security best practice but doesn't directly prevent cross-site memory access, and option C manages extension behavior, not core browser memory isolation.

NEW QUESTION # 29

A Chrome administrator is trying to apply a new policy to the Finance organizational unit (OU) in the Google Admin console, but some managed browsers in the Finance OU display an unexpected policy value. What could be causing the discrepancy in policy value for the affected managed browsers?

- A. A sub-OU under the Finance OU has Inheritance for the same policy set to 'Finance'
- B. Another OU at the same hierarchical level as the Finance OU has the same policy configured with a different value
- C. The Finance OU has Inheritance for the policy set to 'Locally applied'
- D. A user group has the same policy configured with a different value

Answer: D

Explanation:

Policy conflicts can arise if the same policy is configured at multiple levels with different values. User group policies have a higher precedence than OU policies. Therefore, if a user within the Finance OU is also a member of a group with a conflicting policy setting, the group policy will override the OU policy. Policies at the same hierarchical level do not typically conflict in this way. If the Finance OU has "Locally applied," it would mean it's not inheriting, but it wouldn't explain a *discrepancy* within the OU itself unless multiple local settings were applied. A sub-OU inheriting from Finance wouldn't cause a discrepancy at the Finance OU level.

NEW QUESTION # 30

An administrator identifies that the next major Chrome release, Chrome 130, has an issue with one of their critical business applications. The company's Chrome browsers are currently on version 129.0.6568.91. The administrator needs to prevent browsers from updating to Chrome 130, while allowing continued updates within the Chrome 129 major version. Which target version prefix should the administrator use in the updates setting to achieve this?

- A. 129"
- B. 129.
- C. 0
- D. 129(

Answer: B

Explanation:

To target all updates within the 129 major version, the administrator should use the target version prefix `129.

` . This tells Chrome to stay within the 129 branch and accept minor updates (like 129.0.x.y to 129.1.x.y) but not to upgrade to the next major version (130). The other options are not the correct syntax for specifying a major version prefix for target updates.

NEW QUESTION # 31

An end user is returning from an extended leave of absence and finds their browser is no longer active. The administrator is not sure if the inactivity policy has been violated. What is the minimum action necessary to re-enroll this browser?

- A. Close and reopen Chrome
- B. Delete the device management token and reopen Chrome
- C. Verify the policy has been violated and then wipe the browser
- D. Delete the browser from CEC and reopen Chrome

Answer: B

Explanation:

If a browser becomes inactive due to policy, the device management token likely needs to be refreshed or re-established. Deleting the token and then reopening Chrome will typically trigger the browser to attempt re-enrollment and obtain a new token, bringing it back under management. Wiping the browser or deleting it from the CEC might be necessary in more severe cases but is not the minimum action. Simply closing and reopening Chrome might not be sufficient if the token has expired or been invalidated.

NEW QUESTION # 32

An administrator is using Organizational Units (OU) to apply different Chrome browser settings to different types of devices. The administrator needs to ensure that the browsers are placed in the correct OU. Which token must the administrator generate and apply?

- A. Browser Policy Token
- B. Cloud Management Token
- C. Enrollment Token
- D. Device Management Token

Answer: C

Explanation:

The ****Enrollment Token**** is the key to associating a Chrome browser instance with a specific organizational unit (OU) in the Google Admin console during the enrollment process. By applying the correct enrollment token during setup, the browser will be placed in the designated OU and inherit the policies configured for that OU. Device Management Tokens are more relevant for ChromeOS devices. Browser Policy Tokens are not a standard term for OU assignment during enrollment. Cloud Management Token is a general term encompassing the enrollment process.

NEW QUESTION # 33

.....

Our world is in the state of constant change and evolving. If you want to keep pace of the time and continually transform and challenge yourself you must attend one kind of Chrome-Enterprise-Administrator certificate test to improve your practical ability and increase the quantity of your knowledge. Buying our Chrome-Enterprise-Administrator study practice guide can help you pass the test smoothly. Our Chrome-Enterprise-Administrator exam materials have gone through strict analysis and verification by senior experts and are ready to supplement new resources at any time.
