The highly relevant content & best valid and useful Sharing-and-Visibility-Architect Exam Torrent will give you more confidence and help you pass easily.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q28-Q33):

NEW QUESTION # 28
Universal Containers (UC) has created a custom Invoice object. Standard sales users at UC can see the records in search layout, but when they click to view the detail, only record name, created date, and last modified date are shown. When the system admin accesses it, he or she sees the full record detail with many more data fields.
What is the likely cause of this issue?

- A. A role-based sharing rule is missing and should be added for the sales user's role to grant access to the fields.
- B. The Sales Users profile does not have access to the remaining fields.
- C. The page layout assigned to Sales User profile has only Read-Only access to the fields.

Answer: B

Explanation:
Field-level security (FLS) defines which fields a user can view or edit. If a user can see some fields (like Name, Created Date, etc.) but not others, the issue is likely related to FLS settings on the user's profile.
* Option A: Role-based sharing rules control record access, not field access.
* Option B (Correct): The Sales User profile likely lacks FLS access for the fields in question. Adjusting the profile or permission sets to grant visibility to these fields will resolve the issue.
* Option C: Page layouts define which fields are displayed but cannot override field-level security. If the profile lacks FLS access, the fields won't appear regardless of the layout.

* Field-Level Security Overview

NEW QUESTION # 29
Universal Containers (UC) has a requirement to expose a web service to their business partners. The web service will be used to allow each business partner to query UC's Salesforce instance to retrieve the status of orders. The business partner should only be allowed access to orders for which the business partner is the fulfillment vendor. The Architect does not want the business partners to utilize the standard APIs and would prefer a custom API be developed. Which three design elements should the Architect consider in order to ensure the data security of the solution?
Choose 3 answers

- A. Provide each partner with their own Salesforce login set to API Enabled on the profile.
- B. Develop a custom Apex web service using the "With Sharing" keyword.
- C. Develop a custom Apex web service with a fulfillment ID input attribute
- D. Set the Orders object's sharing settings to Private in the Org-Wide Defaults
- E. Query the Orders object with Dynamic SOQL based upon the fulfillment ID.

Answer: B,D,E

Explanation:
Explanation
To ensure the data security of the custom web service, the Architect should consider the following design elements:
Query the Orders object with Dynamic SOQL based on the fulfillment ID: This will allow the web service to filter the orders based on the input parameter and return only the relevant records to the business partner.
Set the Orders object's sharing settings to Private in the Org-Wide Defaults: This will restrict access to the Orders object to only the owner and users above them in the role hierarchy by default, and prevent unauthorized access from other internal or external users.
Develop a custom Apex web service using the "With Sharing" keyword: This will enforce the sharing rules defined for the Orders object and respect the record-level access of the web service user.

NEW QUESTION # 30
Universal Containers (UC) has recently changed its internal policy to follow market regulations and create an internal team to manage the collection process. Only this team should have access to Invoke records. currently, invoke is a child in a Master-Detail relationship to Account. Although related lists have been removed from the page layouts, some profiles stills have access to the invoice object.
Which approach should an architect recommend to fix this problem?

- A. Create a Permission Set with No Access to the Invoice object and assign it to unauthorized users.
- B. Replace Account and Invoke Master Detail Relationship by a Lookup and remove Invoice Access from the unauthorized profiles,
- C. Create a new Profile with no access to the Invoice object and assign it to all unauthorized users.
- D. Change the Invoke organization-wide default from Controlled by Parent to Private and remove invoke access from the unauthorized

Answer: B

Explanation:
Explanation
Master-Detail relationships enforce the sharing and security settings of the parent object on the child object.
This means that if a user has access to an Account record, they will also have access to any Invoice records that are related to that Account. To prevent this, the architect can recommend replacing the Master-Detail relationship with a Lookup relationship, which allows the child object to have its own sharing and security settings independent of the parent object. Then, the architect can remove the Invoice access from the unauthorized profiles or use other mechanisms such as sharing rules or permission sets to restrict or grant access to the Invoice object. Therefore, the answer C is correct and the other options are incorrect

NEW QUESTION # 31
To reduce the case time resolution and improve customer satisfaction, Universal Containers (UC) wants to allow specialized marketing consultants to have edit access to Case records of VIP customers. These casts should be visible only to the support rep who owns the case and the marketing consultants.
Which recommendation should a Salesforce architect give to allow this scenario?

- A. Case organization-wide default Public Read Only and Case Team with Read permission.
- B. Case organization-wide default Private, role hierarchy, and Read Only ownership-based sharing rule.
- C. Case organization-wide default Private and Account Team with Read/Edit permission.
- D. Case organization wide default Private and Case Team with Read/Edit permission.

Answer: C

Explanation:
Explanation
Setting the case organization-wide default to Private and adding the specialized marketing consultants to the account team with Read/Edit permission are the best recommendations to allow this scenario. This way, only the support rep who owns the case and the marketing consultants who are related to the account can see and edit the case records of VIP customers. Option B is incorrect, since setting the case organization-wide default to Public Read Only would give access to all cases to all users. Option C is incorrect, since using a role hierarchy and a read-only ownership-based sharing rule would not give edit access to the marketing consultants. Option D is incorrect, since adding the marketing consultants to the case team would require manual configuration and maintenance.

NEW QUESTION # 32
Universal Containers is a fast-growing company that sells containers globally. It has thousands of dealerships throughout the world where local dealers service Containers sold locally. They recently opened two dealerships in California: NorthCal and SoCal. Universal Containers implemented a new partner community to enable their dealers. Each dealership has a dealer Manager who has all service agents report into them. Assuming a private sharing model, what is the best option to enable dealer managers to have visibility to customer cases within their dealership and not across all dealerships?

- A. Create a batch job that creates sharing rules as needed, based on the cases created.
- B. No changes are needed to the sharing and visibility model to implement this requirement.
- C. Build a trigger that create manual sharing of cases as needed whenever a new case is created.
- D. Create sharing groups that share all cases to all agents under the Dealer manager.

Answer: B

NEW QUESTION # 33
......

Compared with other products, one of the advantages of Sharing-and-Visibility-Architect Exam Braindumps is that we offer you free update for 365 days after purchasing.
