Free PDF 2026 Valid Juniper JN0-336: Exam Security, Specialist (JNCIS-SEC) Sample

After your payment is successful, you will receive an e-mail from our system within 5-10 minutes, and then, you can use high-quality JN0-336 exam guide to learn immediately. Everyone knows that time is very important and hopes to learn efficiently, especially for those who have taken a lot of detours and wasted a lot of time. The sooner you download and use JN0-336 Training Materials the sooner you get the JN0-336 certificate.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q50-Q55):

NEW QUESTION # 50

You are asked to determine how much traffic a popular gaming application is generating on your network. Which action will you perform to accomplish this task?

- A. Enable screen options on the proper security zones
- **B. Enable AppTrack on the proper security zones.**
- C. Enable APBR on the proper security zones
- D. Enable AppQoS on the proper security zones

Answer: B

Explanation:

AppTrack is a feature of Juniper Networks firewall solutions that allows administrators to track applications, users, and the amount of traffic generated by those applications on the network. AppTrack can be enabled on specific security zones of the network to monitor traffic on those zones. This feature can be used to determine how much traffic a popular gaming application is generating on the network.

For more information, please refer to the Juniper Networks JNCIS-SEC Study Guide.

NEW QUESTION # 51

You are asked to block malicious applications regardless of the port number being used. In this scenario, which two application security features should be used? (Choose two.)

- **A. AppFW**
- **B. APPID**
- C. AppQoS
- D. AppTrack

Answer: A,B

NEW QUESTION # 52

You set up the Juniper ATP Appliance solution on your network and notice that the macOS files are not being analyzed..... malware.

In this scenario, what must you do?

- A. You must obtain a Apple Mac Mini device and install the secondary core software.
- B. Create a macOS virtual machine on the JATP Appliance and install the secondary core software.
- **C. Under Config -> System Profiles -> Secondary Cores workspace, create a macOS profile**
- D. Under Config > System Profiles > Secondary Cores workspace, enable macOS Detection.

Answer: C

NEW QUESTION # 53

Which sequence does an SRX Series device use when implementing stateful session security policies using Layer 3 routes?

- A. An SRX Series device will perform a security policy search before conducting a longest-match Layer 3 route table lookup.
- B. An SRX Series device conducts an ALG security check on the longest-match route before performing a security policy search.
- **C. An SRX Series device will conduct a longest-match Layer 3 route table lookup before performing a security policy search.**
- D. An SRX Series device performs a security policy search before implementing an ALG security check on the longest-match Layer 3 route.

Answer: C

Explanation:

The sequence that an SRX Series device uses when implementing stateful session security policies using Layer 3 routes is:

An SRX Series device will conduct a longest-match Layer 3 route table lookup before performing a security policy search: When an SRX Series device receives a packet, it first looks up the destination IP address in the routing table and finds the longest matching route to forward the packet. Then, it performs a security policy search based on the source zone, destination zone, source address, destination address, protocol, and application of the packet. If there is a matching policy that allows the packet, it creates or updates a session entry for the packet and applies any security services configured in the policy.

NEW QUESTION # 54

What information does encrypted traffic insights (ETI) use to notify SRX Series devices about known malware sites?

- A. dynamic address groups
- B. certificates
- C. domain names
- D. MAC addresses

Answer: C

Explanation:

Encrypted traffic insights (ETI) uses domain names to notify SRX Series devices about known malware sites. ETI is a feature of the SRX Series firewall that can detect and block malware that is hidden in encrypted traffic. It works by analyzing the domain names of the websites that the encrypted traffic is attempting to access. If the domain name matches a known malware site, ETI will send an alert to the SRX Series device, which can then take appropriate action to block the traffic. ETI is a useful tool for protecting against threats that attempt to evade detection by hiding in encrypted traffic.

NEW QUESTION # 55

.....

Only if you download our software and practice no more than 30 hours will you attend your test confidently. Because our Juniper JN0-336 exam torrent can simulate limited-timed examination and online error correcting, it just takes less time and energy for you to prepare the JN0-336 Exam than other study materials.
