NS0-528 Reliable Study Guide & Valid NS0-528 Exam Pattern

Network Appliance certification NS0-528 exam is a test of IT professional knowledge. ITCertMagic is a website which can help you quickly pass Network Appliance certification NS0-528 exams. In order to pass Network Appliance certification NS0-528 exam, many people who attend Network Appliance certification NS0-528 exam have spent a lot of time and effort, or spend a lot of money to participate in the cram school. ITCertMagic is able to let you need to spend less time, money and effort to prepare for Network Appliance Certification NS0-528 Exam, which will offer you a targeted training. You only need about 20 hours training to pass the exam successfully.

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional Network Appliance certification to pave the way for a better future. The NS0-528 question and answers produced by our company, is helpful for our customers to pass their NS0-528 exams and get the NS0-528 certification within several days. Our NS0-528 exam questions are your best choice.

First-grade Network Appliance NS0-528 Reliable Study Guide and Realistic Valid NS0-528 Exam Pattern

You can know what knowledge points you do not master. By the report from our NS0-528 study questions. Then it will be very

easy for you to make your own learning plan. We believe that the learning plan based on the report of our NS0-528 preparation exam will be very useful for you. So if you buy our NS0-528 Practice Engine, it will help you pass your exam and get the certification in a short time, and you will find that our study materials are good value for money.

Network Appliance NS0-528 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshooting and Testing: This section of the exam measures the skills of Support Engineers and focuses on the practical skills needed to maintain data integrity. It involves troubleshooting common data protection configuration issues, executing well-defined Disaster Recovery (DR) procedures, and performing data restore operations to recover from data loss.
Topic 2	• NetApp ONTAP Core Data Protection Features: This section of the exam measures the skills of Systems Administrators and validates core knowledge of data protection and redundancy within the ONTAP environment. It encompasses understanding how data efficiencies impact protection strategies and the practical knowledge required to deploy these data protection solutions effectively in a hybrid cloud infrastructure.
Topic 3	• NetApp ONTAP Business Continuity Solutions: This section of the exam measures the skills of Disaster Recovery Specialists and covers advanced business continuity technologies. This includes the configuration and operation of SnapMirror active sync for continuous data replication and the execution of SVM-DR (Storage Virtual Machine Disaster Recovery) operations to ensure high availability.
Topic 4	• NetApp Data Protection Software: This section of the exam measures the skills of DevOps Engineers and focuses on the deployment and administration of NetApp's proprietary data protection software. A key part of this domain involves applying these solutions to protect modern containerized applications running in Kubernetes environments.
Topic 5	• Data Protection Solutions: This section of the exam measures the skills of Storage Architects and covers the foundational principles of designing data protection solutions. It focuses on creating comprehensive design documentation, understanding the various components involved, and identifying all critical solution dependencies to ensure a robust and reliable data protection strategy.

Network Appliance Implementation Engineer - Data Protection Exam Sample Questions (Q210-Q215):

NEW QUESTION # 210
What is a backup schedule in NetApp data protection software?

- A. A set of rules for determining when backups occur
- B. A method for optimizing data access
- C. A method for encrypting data to protect it from unauthorized access
- D. A method for compressing data to reduce storage space

Answer: A

NEW QUESTION # 211
What is RAID-DP in NetApp ONTAP?

- A. A method for optimizing data access
- B. A method for protecting data against disk failures
- C. A method for encrypting data to protect it from unauthorized access
- D. A method for compressing data to reduce storage space

Answer: B

NEW QUESTION # 212

An administrator has an on-premises NetApp AFF cluster with 300TB of used volume space. 200TB of the volume data is tiered using NetApp BlueXP tiering to Amazon Simple Storage Service (Amazon S3). The administrator is tasked to configure NetApp BlueXP backup and recovery from the AFF cluster to Amazon S3.

When the first backup completes, how much data is copied from on premises to the cloud?

- A. 500TB
- B. 100TB
- C. 300TB
- D. 200TB

Answer: B

Explanation:
NetApp BlueXP backup and recovery backs up only the data that resides on-premises. In this scenario:
* Total used volume space: 300TB
* Already tiered to S3 using BlueXP tiering: 200TB
* Remaining local (hot) data: 100TB
Only this 100TB of local data will be copied during the first backup, as tiered data is not re-copied by BlueXP backup and recovery.

NEW QUESTION # 213

You are working with a customer with two NetApp clusters, one AFF A800 cluster and one AFF A900 cluster, in different locations. The customer has a SAN application that spans multiple volumes, which needs protection in the event of a disaster with automatic failover. The customer requires zero RPO and near-zero RTO for this application.

Which two steps should you take to implement this solution? (Choose two.)

- A. Install NetApp ONTAP Mediator service at a third site.
- B. Implement a MetroCluster IP configuration.
- C. Set up and initialize a SnapMirror active sync relationship.
- D. Set up and initialize a SnapMirror Asynchronous relationship.

Answer: A,C

Explanation:
To achieve zero RPO and near-zero RTO for SAN applications across two NetApp clusters in different locations, you must:
* Use SnapMirror active sync, which provides active-active synchronous replication.
* Deploy the ONTAP Mediator at a third site to monitor and coordinate automatic failover during disaster events.

NEW QUESTION # 214

You have a SolidFire cluster running SolidFire Element Operating System 10.1 and are asked to replicate to an existing ONTAP cluster.

Which ONTAP destination is supported?

- A. ONTAP Cloud with the MirrorLatest policy
- B. FAS9000 with the MirrorAndVault policy
- C. ONTAP Select with the MirrorAllSnapshots policy
- D. AFF A700 with the XDPDefault policy

Answer: A

NEW QUESTION # 215
