- A. Automated ESXi host patching and firmware updates
- B. Configuring vSAN disk groups automatically
- C. Deploying vendor-specific hardware drivers across multiple hosts
- D. Provisioning new VMs from templates

NEW QUESTION # 108

After a migration to VCF 9.0, an administrator must import only logging data newer than 90 days from Aria Operations for Logs 8.x into VCF Operations for Logs. If VCF Operations for Logs has enough space available, what is the correct way to achieve this?

- A. Import logs from an NFS archive used for Aria Operations for Logs.
- B. Initiate the transfer from the Control Panel in VCF Operations.
- C. Configure log forwarding in Aria Operations for Logs.
- D. Initiate the transfer from Aria Operations for Logs.

Answer: B

Explanation:
VCF 9.0 introduces Log Data Transfer initiated from VCF Operations. The docs say: "You can transfer log data for up to 90 days from Aria Operations for Logs 8.x... The migrated logs are stored in VCF Operations for logs." and "To transfer logs... navigate to the Logs Data Transfer card in Administration > Control Panel... click the INITIATE TRANSFER button... You can select the duration of logs to transfer..." (emphasis added).
They further clarify that simple forwarding does not transfer already ingested logs: "Forward logs... does not transfer already ingested logs. Transfer historical logs up to 90 days... using the Log Data Transfer feature in VCF Operations."

- E. Manually download the update bundles with a secure browser from the VMware website.

Answer: A,B,C

Performing a pre-check is important to verify that all components are compatible with the new version to avoid compatibility issues during the upgrade process.
The SDDC Manager UI is used to initiate the upgrade process, providing a guided and consistent method for upgrading the VMware Cloud Foundation environment.

- A. Regular audits and patching guided by ITIL processes
- B. Hardening guides that align with NIST standards
